Acknowledgments

We are indebted to several individuals whose assistance made our work possible. They gave generously of their time and their expertise.

Ceil Belasco, Director of Training, Parent Education & Advocacy Leadership (PEAL) Center

Justine Cortez, student, University of Pittsburgh

Jamey Covaleski, staff member, University of Pittsburgh Medical Center

Stanley Denton, Assistant Professor of Education, Point Park University

Nermeen El Nokali, student, University of Pittsburgh

Sonya French-Begay, WIA Program Director, Council of Three Rivers American Indian Center of Pennsylvania

Marian Hampton, Reference Librarian at Hillman Library, University of Pittsburgh

Elizabeth Healy, Director, Parent Education & Advocacy Leadership (PEAL) Center

Lee Marcuzzi, Training Coordinator, Gay, Lesbian, and Straight Education Network (GLSEN)

Rob Perrone, student, Carnegie-Mellon University

Robert Stumpp, Senior Policy Manager, Allegheny County Department of Human Services

Charlene Trovato, Associate Professor, University of Pittsburgh

Tom Wise, Chairman of the Board, Gay, Lesbian, and Straight Education Network (GLSEN)

We sincerely hope that our report accurately reflects their many contributions.

However, any mistakes or views expressed are ours.
Introduction

In May of 2009, students of the University of Pittsburgh’s Professional Seminar in School-Based Behavioral Health expressed a deep concern about a lack of cultural sensitivity in school settings. Human diversity brings with it diversity in our schools. Yet, educators may not have adequate preparation to engage in culturally sensitive encounters with students and their families. Our team decided to write a casebook that might enhance educators’ skills and knowledge in communicating and interacting effectively with students and their families who identify with different cultures. Our casebook is designed for use in teacher preparation classes, new teacher induction, or professional development sessions in schools and youth agencies.

Given the limited time available for this work, we focused on these areas of diversity and culture:

1. Ethnicity
2. Race
3. Geographic Diversity
4. Religion
5. Gender
6. Disability
7. Sexual Orientation

Limitations of the Guide

The team recognizes that the casebook is in no way inclusive of all cultural groups and their needs. However, it is our sincere hope that these initial suggestions and resources will be useful to educators as they talk about cultural influences and pursue improved practices.

Methodology

Students and instructors met with local resource persons to discuss the focus areas. In addition, students contacted experts in the field and sought their advice on particular questions. Finally, students engaged in extensive reading of the literature, as reflected in the attached appendices.
The major text for this project was Robinson and James’ *Diversity in human interactions: The tapestry of America*. That book contains essays from contributors based on real stories, anecdotes, lessons, and histories of different groups. The twelve chapter topics include disability, sexual orientation, religion, Native American culture, and Latino/a culture, and many others. This is the citation for the book:

**How the Casebook is Organized**

The casebook is divided into chapters, each exploring a different aspect of diversity. Each chapter includes an explanation and need for cultural sensitivity, and two cases with questions for discussion. One case involves an interaction with a student, while the other case focuses on a parent-teacher interaction. The cases illustrate missteps that adults may make in their interactions with children and their families. Following each case study is a list of questions that may be used for discussion. In addition, three sections titled “What?”, “So what?”, and “Now what?” provide information and tips associated with each of the seven content areas. Finally, a resource section within each chapter includes additional resources that teachers and educators may find useful. Books, websites, and films are included in these resource sections.

Throughout the chapters, bolded terms appear. Definitions for these terms are in the glossary following the chapters. To help facilitate discussion, the document is line-numbered.
Chapter One: True Variety

Case Study: Nikolas

Miss Jones is a first year, second grade teacher in a small rural district. She recently graduated from college and is eager to educate the 22 young minds in her classroom. Miss Jones has a nice group of students in her class, and enjoys coming up with exciting activities for each occasion. As the year progresses, Miss Jones becomes increasingly worried about one of her students, Nikolas. Nikolas withdraws himself from many of the holiday celebrations, and does not seem as excited as the other children. Early in the school year, Miss Jones learned that Nikolas and his parents moved here from Greece two years ago. Nikolas speaks perfect English and fits in well with the other children. Because Nikolas’ family is Christian, Miss Jones did not make any exceptions to her holiday celebrations. Nikolas’ parents did not make any suggestions or requests about Nikolas participating in any of the events. Miss Jones became confused, however, when Nikolas’ behavior was much different during these holiday events.

In November, Miss Jones knew that Thanksgiving may be confusing to Nikolas, especially if his parents had not taught him about the holiday. She did not expect Christmas time to be an issue, however. Nikolas was not excited when Santa Claus came to school, and did not want to sit on his lap. When he did, Nikolas did not know that he was supposed to ask Santa Claus for gifts. Miss Jones did not understand the lack of enjoyment in a young child. When Easter came along, the students were permitted to bring in some of the Easter eggs that they colored at home. Nikolas seemed very excited about this, and Miss Jones was relieved to finally have gotten to a celebration that Nikolas enjoyed. The students brought in their eggs bearing all sorts of colors and designs, but when Miss Jones looked at Nikolas’ eggs, they were all red.

“When did you only use red? That’s not even an Easter color!” one little girl commented. Other children giggled when they saw Nikolas’ eggs.

The proud look on his face quickly vanished. “They are supposed to be red. I’ve never seen eggs like yours before,” Nikolas responded. Miss Jones had, yet again, another sad celebration.

Throughout the school year, the children got to wear a special hat and bring in treats for the other students on their birthdays. Knowing that Nikolas’ birthday was
approaching, she hoped that he would be excited, as the other children were on their birthdays.

When the day of Nikolas’ birthday arrived, Miss Jones greeted him enthusiastically, “Good morning birthday boy! How old are you today?”

Nikolas was startled by her greeting, and responded with a short “Eight.”

Miss Jones tried again, “Did you bring your treats in for your special day?”

Nikolas’ face turned red, “No, I forgot that today was my birthday. Should I bring some tomorrow?”

Miss Jones thought to herself, “What child forgets his birthday? What type of parent forgets their own child’s birthday?” Miss Jones told Nikolas not worry, and quickly gathered up some snacks to substitute for Nikolas’ birthday treats.

Miss Jones decided that she needed to approach his parents about her concerns. Miss Jones did not know anyone from Greece before she met Nikolas’ parents. However, she only met Nikolas’ parents twice, and very briefly, as their work schedules prevented them from attending parent teacher conferences. Miss Jones was nervous about bringing up Nikolas’ birthday. She did not want to imply that they were bad parents.

Miss Jones approached carefully, “Did Nikolas tell you what we did at school for his birthday?”

His parents shook their heads. Miss Jones described how his birthday just happened to be the day that the fire department came to discuss fire safety.

“Nikolas got to sit in the driver’s seat and honk the horn, because he was the birthday boy!” declared Miss Jones.

His mother responded nicely “Oh he did tell us about the fire truck. I forgot that was the same day as his birthday.”

Miss Jones continued “I think he forgot that it was his birthday because he forgot his treats at home. But I had enough treats for the whole class so it worked out great!”

This time, his father spoke up, “We are Greek! We don’t celebrate birthdays like you do. We celebrate Name Days.”

Miss Jones was embarrassed. She assumed that everyone in the world celebrated birthdays, with the exception of certain religions. Miss Jones began to wonder what other mistakes she had made with her elaborate holiday celebrations.
Discussion Questions:
1. How could Miss Jones have handled the situations differently?
2. What could Miss Jones have done to prevent the mistakes and assumptions that she made?
3. What resources are available to teachers and to parents to help understand each other’s ethnic cultures?
4. Think about other assumptions that could be made during these situations. How could those be avoided?

What?
“An ethnic group or ethnicity is a population of human beings whose members identify with each other, either on the basis of a presumed common genealogy or ancestry. Ethnicity connotes shared cultural, linguistic, or religious traits.” Ethnicity is often used interchangeably with race, but they are not necessarily the same. Race refers to physical characteristics, while ethnicity includes language, beliefs, and traditions.
Definition from: http://www.diffen.com/difference/Ethnicity_vs_Race

So What?
It is important to consider differences in terms of ethnicity throughout your careers and personal lives. There are nearly one hundred different ethnic groups in the United States, each one participating in their own set of values, beliefs, and customs, which may or may not differ from your own. There are many negative assumptions and stereotypes that exist for different ethnic groups. Gross (1996) found that students in a school with a large number of minority students, had higher office referrals and behavior incidences due to racial/ethnic slurs and stereotyping. You as a teacher must also be aware of your own attitudes towards others. Eberly, Rand, and O’Connor (2007) cited that “Dispositions of teachers strongly affect the impact they have on student learning and development” (p.31). Remember, actions speak louder than words. Experts have also found that many teaching practices are not culturally sensitive. Kauffman, Conroy, Gardner, and Oswald (2008) stated that “Carefully designed multicultural education should recognize the uniqueness of majority and minority children, better preparing all children who receive it to live in a world with increasing diversity” (p.241). They went on to say that “careful analysis and planning of how culture is incorporated in instruction is critical” (2008, p. 241).
Now What?

You will meet, work with, and teach many people from different ethnic groups. A person’s ethnic identity is not always visible through physical appearance, so it is important to be open-minded and non-judgmental. As a teacher, you want to build positive relationships with your students, parents, and co-workers. It only takes one insensitive act to create a negative relationship, which may take twice as long to repair. Teachers must also encourage other students to be accepting of students from different ethnic backgrounds. This will prevent any negative behavior towards students who are “different,” cut down on stereotypes, and minimize voluntary segregation (Gross, 1996). Encourage your students to get to know one another, and provide activities that allow them to learn about one another. Gross (1996) provided excellent lessons and activities, in her dissertation, that may be extremely useful for these purposes.

Conduct your own research to learn about the different ethnic groups in your area, especially those in your school district. Educate yourself through books, websites, articles, and films, to create a better understanding of those around you. These resources will also be useful to learn how to interact with individuals from different ethnic groups. According to Kaufman, et al. (2008), using scientifically-based behavior principals is the best way to teach all students. Do not stick with a pedagogy that is wrong for the students only because you are more comfortable using it. Explore your resources and teach using practices that have been proven to work for all children.

Case Study: The Thompsons

“Mom! I need you to sign this for school!” Jenny shouted as she plopped her backpack down in the hallway.

Jenny’s mom, busy with dinner preparations, nodded her head and replied, “Okay Jenny. Put your backpack away and set the table for dinner.”

Two days later at school, Mrs. Shields asked the students to turn in their permission slips for the field trip. Jenny suddenly realized her mom hadn’t signed the permission slip!

“Mrs. Shields, my mom didn’t sign mine yet.” Jenny spoke up. “Can I bring it tomorrow?”

“I’m sorry Jenny, the deadline was today. All of the students who did not bring their permission slips will have to stay here with Mr. Thompson while our class goes on the field trip” Mrs. Shields announced.
The fifth grade classes were invited to go on the field trip at the last minute, giving them only 3 days to get the permission slips signed and returned. Mrs. Shields was tired of her students forgetting their materials and being irresponsible. She had decided to use this as a way to hold them accountable. Mrs. Shields felt bad that Jenny was unable to go on the field trip, because Jenny is an excellent student. But since other students also forgot their permission slips, Mrs. Shields could not make an exception for Jenny. She stood her ground and did not give in.

Jenny slumped through the rest of the school day with mixed emotions. She was sad that she could not join her classmates on the field trip, and disappointed in herself for being irresponsible. She felt angry with her mom for not signing the permission slip, but she quickly felt ashamed of her anger, knowing that her mom needs help with school papers. Jenny’s anger quickly turned to her father, who was out of town on business.

“If dad hadn’t taken that stupid trip, I would be on my field trip right now,” Jenny thought to herself. “Dad always signs my papers for school, and it figures that the one time he goes out of town is when I need him to sign the most important paper ever!”

When Jenny got home from school that day, she told her mom that she could not go on the field trip because she did not have her permission slip. Jenny’s mom felt guilty about the situation, knowing that she should have signed the paper when Jenny asked her to.

When Jenny’s mother moved to the United States from Japan eleven years ago, she spoke very little English. She now understands and can speak English very well; but she still struggles with reading. Jenny’s father usually takes care of all school communication. Unfortunately, he had to go away on a business trip for the week, and was not there when Jenny brought home the permission slip. Jenny’s mother was unable to read the due date on the form, and did not realize its urgency.

The next week, when Jenny’s father had returned from his trip and heard about the situation, he called Mrs. Shields to discuss what happened. Mrs. Shields knew the situation at home but had forgotten that Mr. Thomas was going out of town that week.

“You know that my wife has trouble reading the school papers, and I was out of town during that week,” Mr. Thomas stated calmly. “You usually give the children the papers at least a week in advance.”
“You’re right Mr. Thomas, but this field trip invite was at the last minute, and I only had a few days to get the forms passed out and returned” Mrs. Shields explained. “I understand that, but Jenny shouldn’t have been punished because I was out of town. She always turns everything in on time!” Mr. Thomas exclaimed. “Jenny was responsible and told her mom the paper needed signed. It’s not her fault that my wife couldn’t read the due date and thought it could wait.”

Mrs. Shields apologized but there was nothing she could do. The field trip was last week and Jenny had already missed it. She thought about Jenny’s misfortune for the rest of the evening, her mind flooded with excuses:

“It’s not my fault that Mrs. Thomas never learned how to read English. Jenny knew that the paper needed to be returned, she could have been more responsible. And why didn’t Mr. Thomas contact me before hand and let me know that he was leaving town? Maybe this wouldn’t have happened if I knew the situation.”

Discussion Questions:
1. How do you think Mrs. Shields should have handled the situation?
2. Was Mrs. Shields wrong not to let Jenny go on the field trip?
3. Discuss ways that Mrs. Shields and Jenny’s family could have prevention this situation from happening.

www.culturecrossing.net
“A community built guide to cross-culture etiquette and understanding.” This
site is great for a quick reference to many different cultural topics. The reliability
is not known as it is “community built.”

http://www.valpo.edu/geomet/geo/courses/geo200/usa_maps.html:
This site provides a map gallery of ethnic groups in the United States. It is very
useful to see the percentage of each ethnic group in your area.

http://www.standards.dfes.gov.uk/ethnicminorities/resources/Extended_Eth_Codes_V1
_Oct06.xls
This site provides the codes that are used to identify ethnic minority groups on
school forms in the UK. It is useful to see the difference between the “main
category” and “approved extended categories.”

Films
Freedom Writers
Hillary Swank stars as a teacher who changes the lives of a class of inner city
students. She encourages them to learn about themselves and others who have
been through the same circumstances and situations. This movie is based on the
true story and book The Freedom Writers.

Gran Torino
Clint Eastwood stars as a Korean War vet, recently widowed, who learns to open
his heart and mind to his new neighbors (of an ethnic group that he dislikes).
Stereotypes, racial slurs, and harsh language are strong in this film as you
witness Eastwood’s transformation and learning process.

Mad Hot Ballroom
“Ballroom dancing goes from lame to cool for a group of New York City public
school kids in this insightful documentary. The film follows a group of 11-year-
olds as they learn to dance old-school styles including the meringue, rumba,
tango, foxtrot and swing. Candid interviews capture the kids’ initial reluctance at
learning ballroom dance and their transformation into serious competitors
determined to win a citywide competition.” (Netflix Review)
Books

*School Girls: Young women, self-esteem, and the confidence gap* By Peggy Orenstein

In this book, Orenstein describes a research study that she conducted to analyze the achievement gap between males and females in the public schools systems. She followed around numerous females from two very different schools, each of different backgrounds. Her experiences reveal the shocking similarities and differences between students of different minority groups.

*Exploring culture: Exercises, stories, and synthetic cultures* By Gert Jan Hofstede, & Paul B. Pedersen

“A unique training book containing over 100 culture awareness exercises, dialogues, stories, incidents, and simulations that bring to life Geert Hofstede’s five dimensions of culture. These dimensions are: power distance, collectivism versus individualism, femininity versus masculinity, uncertainty avoidance, and long-term versus short-term orientation. Exploring culture also contains new material on Geert Hofstede’s cultural dimensions and the synthetic cultures. An excellent partner to Hofstede’s popular cultures & organizations.” (Amazon.com)

Chapter Two: What’s the Difference Between Us?

Case Study: Kayla March

Kayla March is an African American 2nd grader. She and her family recently moved from the inner city to a suburban area. Kayla’s mother, Darlene, registered Kayla for Catholic school in their area because she wants to offer her daughter the best education available. Darlene believes that her new school will not only provide quality education, but also will give Kayla a good moral foundation, which will prepare her for success as an adult. Kayla entered Bishop Andrews almost halfway through the first quarter of the school year.

After Darlene dropped Kayla off for her first day in the new school, Kayla met her new teacher, Mrs. Simpson. Mrs. Simpson welcomed Kayla and introduced her to the class. The class greeted her and Mrs. Simpson showed Kayla to her curiously isolated seat in the back of the room. Mrs. Simpson continued with her science lesson on animals. She looked to Kayla and told her, “I know you’ve probably never heard of an aardvark before, but I will fill you in on this later.”

Kayla wanted to tell Mrs. Simpson that she does in fact know about aardvarks, but she did not want to correct her new teacher on her first day of school, so instead, Kayla quietly replied, “Okay.”

Later in the day Mrs. Simpson called for free time in the classroom. During free time, the children can play board games, puzzles, computer games, etc. if they have completed their class work. Since she was new to the class, Kayla sat in the corner alone playing with some blocks. Her classmate Jessica approached her and began to play with her. The girls got along well, and Kayla was excited at the prospect of a new friend. But suddenly, Jessica pointed at Kayla’s arm and asked, “Why does your skin look different than mine? Have you been out in the sun for a really long time? Because my mommy says that staying out in the sun for a long time will give you sunburn and it will hurt really bad!”

“My skin is different because I am black,” Kayla replied in a low tone.

“Oh I have heard all about black people! My uncle has told me stories about you,” Jessica said excitedly. “He says that you people are lazy, loud, and rude. Is that true?”
“No, that’s not true! I can’t believe you would say something like that! Do I look lazy, loud, or rude?” Kayla replied, as tears welled in her eyes. “I don’t want to play with you anymore. Go away!”

“Well why would he tell me those things if they aren’t true, huh? My uncle isn’t a liar,” Jessica stated matter-of-factly.

“I don’t know. Maybe he is a bad man who doesn’t have any friends,” said Kayla angrily. “I am going to tell the teacher that you said those bad things about me.”

“Go ahead, she is the same color as me so she probably knows all about you people, too,” Jessica told Kayla.

Kayla ran crying to tell Mrs. Simpson what happened. “Jessica has been calling me names and saying mean things about me and people who look like me!”

“It’s okay. I’m sure Jessica did not mean those things she said to you. If it happens again, I’ll have a talk with her, okay?” Mrs. Simpson said, wiping the tears from Kayla’s face. “Now run along and play.”

Kayla listens to Mrs. Simpson and returned to the playroom, where Jessica was still playing with the blocks.

Jessica, having overheard Mrs. Simpson, said to Kayla, “I did mean it. I don’t know why God made you that way but I don’t like it. You are ugly! Do you like looking like that? You should look pretty like me. Everyone else in here does.”

“I love the way I look and my mommy tells me that I am beautiful everyday, and she really isn’t a liar,” Kayla declared proudly. “I can’t help the way God made me. Why do you hate me for it? I can’t do anything about the way I look.”

“Well I still don’t like you and I don’t want to play with you anymore.” Jessica rudely stated. “And I am going to tell everyone else in her not to play with you either.”

“But that’s not fair!” Kayla said in disgust. “People should be able to make up their own minds about who they want to be friends with.”

“Not here. If I tell them not to be friends with you, they won’t. They’ll listen to me because I will tell them all the bad things I know about you people,” Jessica said with authority.

“You are mean to me and I don’t even know what I did to you. I am going to tell my mommy that I do not want to come back to this school ever again because you are so mean,” Kayla said in a sad voice.

“Good!” yelled Jessica. “You didn’t belong here in the first place! I hope you never come back here so I don’t have to see your ugly face again!”
Again, Kayla ran to Mrs. Simpson to tell her the things that Jessica said to her. Mrs. Simpson comforted Kayla and told her that she would have a talk with Jessica about being mean to others. Having no idea that the issue was more about race than not getting along with one another, Mrs. Simpson told Jessica, “I think you hurt Kayla’s feelings when you said all those unkind things about her. We do not say unkind things to each other in our class. Remember; always use your nice words with people. You wouldn’t want someone else to hurt your feelings, right?”

“Yes Mrs. Simpson,” Jessica replied.

Mrs. Simpson walked away to check on the other children in the classroom leaving the girls to finish playing.

“Tattletale!” Jessica taunted in an angry voice, sticking her tongue out at Kayla and then walking away.

Darlene picked Kayla up after school and asked, “How was your day sweetheart?”

Discussion Questions:
1. Do you think the school or Mrs. Simpson prepared for Kayla to come into the school?
2. What are some other ways Mrs. Simpson could have handled the situation differently?
3. Do you think the school has ever taught their children about diversity or exposed their children to diversity of any kind?
4. How do you have a conversation about race and culture with a 2nd grader? What do you say?
5. Would it have been appropriate to openly express to the class that Kayla is of a different race and talk about what that means rather than trying to ignore or excuse it?

What?
Markus (2008) along with his colleague, Paul Moya, defines race as a “dynamic set of historically derived and institutionalized ideas and practices that sorts people into ethnic groups according to perceived physical and behavioral human characteristics; associates differential value, power, and privilege with these characteristics and establishes a social status ranking among the different groups…” (p. 654). Race has been
described as index of power, authority, and privilege of one group over another. It is a
way of categorizing or distinguishing significantly different groups from one another
(Markus, 2008). According to the 2000 US Census, there are five main race categories in
the United States. The main categories of race in the United States are “White”, “Black
or African American”, “American Indian or Alaska Native”, “Asian”, “Native Hawaiian
or Other Pacific Islander” (Grieco & Cassidy, 2001). Those who do not identify with one
of the categories listed are given the option to choose “Some other race”. Those who
identified with more than one race are given the option to choose “Two or more races”
(Grieco & Cassidy, 2001). Hispanic/Latino is not used as a central category of race
because it makes up so many different cultures from several geographical locations.
Therefore, it is considered a concept of ethnicity rather than race. (Grieco & Cassidy,
2001).

So What?
For years there has been a nature versus nurture debate about race. Race was thought to
be biological in nature because society attributed certain traits and characteristics to
groups and generalized it to all who belonged to that race. Williams and Eberhardt
found that those who held on to the notion that race was biological were more likely to
endorse stereotypes, had very few friends of different races, and attributed negative
qualities of people of other races to biological traits (Markus, 2008).

Markus (2008) argues that race and ethnicity are not biological in nature; instead, they
are the result of society’s way of making sense of systematic behaviors that guide one’s
own behaviors and explain the behaviors of others. He makes the case that race is
defined by others not associated with a particular group. Categorizing groups has little
to do with values, traditions, beliefs, and/or behaviors of those associated with that
group. Racial differences are imposed by another group and are not necessarily
endorsed by the group itself (Markus, 2008).

Atwater discusses the work of Steele and Aronson who developed a term called
“stereotype threat” (Atwater, 2008, p. 248). Individuals experience stereotype threat
when they begin to believe that the negative traits attributed to one’s group are true of
themselves.
Race is important because society engages in **racism** and **racial discrimination** both consciously and unconsciously. Racial discrimination is used to define people by social categories and is sometimes used as a tool for discrimination. Racial discrimination occurs in healthcare, the labor force, housing opportunities, as well as in education. It is also used to establish the basis for social privilege. Those not belonging to the dominant **race** may be considered by persons engaged in racism as inferior and thus are not afforded the same privileges of one associated with the dominant race. “Attributions of superiority or inferiority to different races have been used as a basis for denying basic human rights to certain groups and entitling others to social privileges” (Trumbull & Pacheco, 2005, p. 7).

Atwater (2008) provides data from various researchers that confirm teachers generally bring racial and cultural biases and assumptions to their classroom—beliefs they are sometimes unaware of. Regardless of whether the assumptions are conscious or unconscious, they have an impact on teacher attitudes and behaviors and student academic achievement. Some teachers see race and culture as a “deficit” in a student’s individual development and academic achievement (Atwater, 2008).

Race is important because it gives an individual a sense of identity, a sense of self. Research shows that identification with a racial group plays a significant role in identity development (Liggett, 2008). **Racial identity** has shown some relationship to academic achievement (Cicetti-Turro, 2007). Members of non-dominant groups seem to have a strong sense of pride and sense of belonging to their culture (Trumbull & Pacheco, 2005). This can be either beneficial or damaging to a student’s academic achievement. If a child feels that their racial identity is accepted and valued in the classroom, they may be likely to perform much better academically. If they feel inferior because of their race, they are more likely to do poorer academically and possibly disengage from education. In fact, researchers have made the argument that students are more likely to succeed when their teachers display cultural sensitivity in the classroom (Scott & Mumford, 2007).

**Now What?**

Race is not an easy concept to grasp nor is it particularly easy to change people’s minds about preconceived notions of race. However, the best way to begin to change people’s
ideals about race is through education. Education is a very powerful tool that can give a
person the ability to reshape beliefs about race.

Liggett (2008) provides data from the US Department of Education that indicates that
over 80% of the teaching profession is comprised of White American teachers, while
there remain a relatively low number of teachers of color. In contrast, there is an
increase in students of color enrolled in public schools, especially in low-income
neighborhoods (Liggett, 2008). In light of this phenomenon, teachers and administrators
must begin to embrace multicultural educational training.

Aside from families, teachers have the most influence on socializing children.
Pedagogical models must address diversity from a perspective of cultural awareness
and must be careful to avoid blaming or defensive attitudes that may result in
miscommunication and ill feelings. Teachers need to learn to move beyond traditional
practices of education into respect, care, concern, and open dialogue with students who
look different from themselves (Cicetti-Turro, 2007).

Liggett (2008) suggests helping teachers learn to explore their own racial identities in
order to understand diversity and learn how to respond to members of other racial
groups. She mentions the idea of “re-contextualizing” interaction with one another
(Liggett, 2008). Liggett (2008) says that this happens through self-exploration and
shifting education programs to embrace multiculturalism.

Atwater (2008) offers the idea of diversity training as a way to address cultural
sensitivity. The training suggested by Zeicher and others is twofold (Atwater, 2008).
The first part encompasses cultural knowledge that seeks to teach about different
cultures and learning styles. The second part is color consciousness that encourages
self-awareness and reflection of one’s own attitudes and beliefs (Atwater, 2008).

Some of the key points to remember when dealing with race:

- Never assume – If you have questions, ASK! (Nermeen El Nokali and Justine
  Cortez)
- View a child as a person/individual. (Elizabeth Healy and Ceil Belasco)
- Challenge people to think about what they believe and why. (Dr. Bob Stump)
• Be open-minded and genuine about learning about different cultures.
• Do not use phrases that begin with “Aren’t you. . .?”, “Don’t you all. . .?”, or “Shouldn’t you. . .?”; use language like “I’m interested in understanding. . .”, “Can you explain?”, Can you elaborate?”. (Nermeen El Nokali and Justine Cortez).
• Be aware of racial and ethnic slurs (even though they may be unconscious or unintended: e.g. “Let’s all sit ‘Indian Style.’”)
• Race can be thought of as a lens. We zoom in when we acknowledge a person’s identity or individualism and zoom out when we make generalizations about a group. Learn to find the right focus by getting to know an individual within the context of their race. (Dr. Stanley Denton)
• Allow children to find their own solutions. Provide guidance and assistance for them to arrive at their own solutions. (Dr. Stanley Denton)
• Be aware of invisibility and spotlighting. Invisibility is when we see what is happening but choose not to address the issue (also referred to as “silenced dialogued”). Spotlighting is when we believe that one person speaks for their whole race. (Dr. Stanley Denton)

Case Study: The McDaniel Family
As Mr. Kingston, the assistant principal at North Central Elementary School, reviewed school attendance for the year’s first semester, he came across a student with an outstanding record of consecutive unexcused absences.
“This is unacceptable!” exclaimed Mr. Kingston. “I am going to have to talk with his teacher and call a meeting with this young man’s family about his absences.”
Mr. Kingston called Mrs. Jefferson, the fourth grade teacher, into the office. “Mrs. Jefferson, I have been reviewing attendance for the first two marking periods and I have come across one of your students, Corey McDaniel, who has missed a lot of school days so far, and it does not look like he has any doctor excuses to verify the missed days. Are you aware of this?”
“Yes sir, I am aware of the fact that Corey has missed several days of school. I have sent several letters home, and the responses simply say that Corey was out of town with family. When I ask him where he has been, he looks to the ground and tells me that he was with his family,” said Mrs. Jefferson. “But I assure you, sir, Corey works
diligently to make up his work upon his return. It is as if he never missed a beat. He
falls right back into place.”

“That may be, but this is an unacceptable number of absences. If he keeps this
up, he’ll be facing truancy,” Mr. Kingston told Mrs. Jefferson. “I am going to call his
parents and schedule a parent-teacher conference.”

Later that day, Mrs. Jefferson discussed Corey’s situation with a colleague.

“Is that Jesse McDaniel’s little brother? Jesse did the same thing when I had him
a few years ago, back when Dr. Singh was principal. Jesse would miss a ton of class in
the fall for ‘family stuff’, then in the spring it was like nothing ever happened—he was a
model student.”

“Really?” Mrs. Jefferson said, “I hope everything is alright, you know, with their
family. I guess I’ll find out when his parents come in for the conference.”

On the day of the conference, Corey, his mother and father, his two younger
brothers, Aunt Christine, and Grandmother Ida all attended the meeting.

Before Mr. Kingston or Mrs. Jefferson could introduce himself or herself, Corey’s
grandmother blurted out, “now just what is this meeting about?”

Mr. Kingston replied, “Well I asked Corey’s parents here to discuss a concern I
had about Corey’s attendance. My records show that he has missed almost twenty days
of school so far, and we are only half way through the school year. Mrs. Jefferson tells
me that Corey is a great student, but if these absences continue, there could be serious
consequences for him. Is there something the school should be aware of? An illness? Is
everything okay at home?”

Everyone stared at one another intently. After a long pause, Ida responded,

“Corey is healthy and everything is fine at home.”

“Well, then why is he missing so much school, Mr. and Mrs. McDaniel?”
directing his question to Corey’s parents. “If we do not find out what is going on here
soon, we will be obligated to take action.”

“And what action might that be, Mr. Kingston?” Grandmother Ida asked.

“Well, if Corey continues to miss this much class, he may face failure or
expulsion.” remarked Mr. Kingston.

Silence filled the room once again. Nervous to fill the silence, Mrs. Jefferson
interjected, “actually, Mr. and Mrs. McDaniel, Corey is doing very well in my class. He
gets along with his peers and his grades are remarkable. He has missed quite a few
days but when he does miss class, Corey will come to me upon his return to find out
what he needs to do to make up his work. I have not had a problem with Corey
finishing his work yet.”

“Well, if Corey is doing very well in class, what is the problem?” Corey’s
grandmother inquired.

Frustrated with Grandmother Ida’s tone, Mr. Kingston stated, “Mrs. McDaniel,
our school policy clearly states that a child is not to have more than ten unexcused
absences each half of the school year. Furthermore, these mysterious absences fit the
pattern for an abusive household. Now, if you can’t tell me why Corey is missing so
much school, we are legally compelled to inform the authorities of possible child abuse.
Now, is there something you’d like to tell me?”

“If you must know, and it seems that you must, Mr. Kingston, the days Corey
has missed school relate to traditional ceremonies within our tribe. As even you’ve
surely noticed we are Native American. Every year our tribe holds ceremonies on the
reservation that last several days. These ceremonies are very sacred to us and are
something we like to keep private and not share with the world,” explained Corey’s
grandmother. “Corey’s parents have sent letters to Mrs. Jefferson prior to leaving that
indicating that Corey would be absent from school for familial reasons. We understand
that school is very important, but our heritage is also important to us and we want
Corey to know his history and appreciate his culture. Corey’s old school said they
‘didn’t recognize’ tribal holidays, and threatened to expel him. So if you want to expel a
perfectly good student for partaking in cultural traditions, we will take Corey out of
this school and place him a more tolerant school.”

Discussion Questions:

1. Do you think this is the first meeting between Corey’s family and the school?
2. As the teacher, how would you have handled the situation with the assistant
   principal and with Corey’s family so that it would not have come to this?
3. Why do you think other family members came to the conference meeting when
   Mr. Jefferson only wanted to speak with Corey’s parents?
4. Why do you think that Corey’s grandmother did all the talking even though Mr.
   Kingston tried addressing Corey’s parents throughout the meeting?
5. In what ways could Mr. Kingston handled this situation differently?
6. Do you think this school is culturally aware or celebrates different cultures?
7. As a teacher or school administrator, how would you have handled this situation? Would you excuse the absences in light of cultural traditions or would you continue with school policy and take action?

Suggested Resources:

Books

This is a book about race relations in American. It provides examples of attitudes of race in the United States. The book offers ways to bring about meaningful dialogue to confront race issues.

This serves as a handguide to help teachers learn and understand the importance of cultural awareness as schools are becoming more diverse. It covers issues related to culture, race, and ethnicity, and how one can learn to be culturally sensitive and acquire the skills to work with diverse populations. The book can also be download online: [www.alliance.brown.edu/pubs/leading_diversity/](http://www.alliance.brown.edu/pubs/leading_diversity/)

http://www.understandingprejudice.org/readroom/kidsbib.htm

A listing of books that encompasses several topics such as race, discrimination, slavery, disabilities, gay and lesbian families, and women’s rights.

Celebrating Cultural Diversity through Children’s Literature

http://www.multiculturalchildrenslit.com/

A listing of multicultural children’s literature that includes a number of different cultures.

Videos
30 Days - Life on an Indian Reservation
This is a video about living on the reservation as an American Indian. This is a brief glimpse into the world of the Navajo tribe.

A Class Divided – Jane Elliot Experiment
http://www.pbs.org/wgbh/pages/frontline/shows/divided/xperiment
A teacher did this experiment the day after the murder of Dr. Martin Luther King. Some of her children were not sure of the significance of his life so she decided to do an experiment with her children using eye color as a discriminating factor to teach the children about race and discrimination. The video discusses the experiment she did and includes interviews with the children years later to show how this experiment changed their lives.

Race - The Power of an Illusion
http://www.pbs.org/race/000_General/000_00-Home.htm
This website is a documentary about race in society. It is a valuable tool for videos, lesson plans, history and timelines, facts and knowledge about race, and further resources and additional readings.
Case Study: Jimmy Brown

C City Elementary School is located in an urban area with a population of approximately 500,000 people. C City Elementary educates students from Kindergarten through fifth grade. Mrs. Smith is a fourth grade teacher there, having moved from a slightly larger city to work in her current teaching position. Her class contains 22 students, all of whom have grown up in cities.

Mrs. Jones is the School-Based Behavioral Health Director at C City Elementary. Like many of Mrs. Smith’s students, Mrs. Jones has lived in C City her entire life, except while attending college.

Mr. and Mrs. Brown and their son, Jimmy, are from a very small town in a rural part of the state. Mr. Brown recently lost his job of eight years, and after an extensive search for employment, he finally found work in C City. In October, he and his family moved to the City so that he could pursue a new career.

With the move, Jimmy joined Mrs. Smith’s class. On Jimmy’s first day, Mrs. Smith was discussing a presentation assignment about different occupations:

“Let’s talk for a minute about how your reports and presentations are coming along. Now that you all have had a few days since I assigned occupations to everyone, are you starting to find out anything interesting? I’m really looking forward to your presentations; we have a nice mix of occupations this year.”

At the end of the day, Mrs. Smith pulled Jimmy aside to talk to him about the occupation assignment.

Mrs. Smith began, “I realize you won’t have as much time as the other students to work on your occupation report, Jimmy, but that’s why I have the perfect thing for you! I’ve decided to assign you the occupation of a farmer. I know you and your family moved here from way out in the country, so you should have no trouble doing a report on this job. You should start working on this right away. See you tomorrow!”

When Jimmy got home that night, he told his parents about his assignment.

“Mom, Dad, listen,” Jimmy said. “My new teacher gave me an assignment today. She told me I have to do a report and a presentation on an occupation. Everyone else has had more time than me to do this, so she said she wanted to assign me an occupation that I’d already know a lot about. So, she told me I should do mine on a
farmer. She said that I should know a lot about being a farmer because we moved here from way out in the country, but I don’t know anything about farming. I mean—Dad, you sell insurance, and Mom, you worked at the community college. Neither of those sounds like farming to me.”

Upon hearing this, Mr. and Mrs. Brown were pretty offended that Mrs. Smith assumed that they were farmers just because they used to live in a rural area. They couldn’t believe that a teacher would jump to such conclusions about a child and his family based solely on where they used to live. They became even more upset because Jimmy knew nothing about farming; he was always interested in building things, and wanted to be an architect. With no knowledge of his occupation and less time to do the assignment, they feared for Jimmy’s grades.

Mr. and Mrs. Brown decided to call the school and complain about the incident. The complaint was relayed to Mrs. Jones, the School-Based Behavioral Health Director, who now faced a very tough situation. Mrs. Jones wants to make sure Jimmy can complete his assignments now, so he doesn’t get behind and lose confidence later. Something must also be done about the parent-teacher relationship that is now suffering due to Mrs. Smith’s insensitivity and assumptions about the culture of rural life.

Discussion Questions:

1. What could Mrs. Smith have done to prevent the mistake of making assumptions about Jimmy’s background?
2. How could Mrs. Smith have handled assigning Jimmy a report/presentation topic differently?
3. What could be done to mend the relationship between Mrs. Smith and the Browns?
4. What could be done to ensure that Jimmy feels comfortable in class and confident that he can keep up with his classmates?

What?
The case study above brings to light the issue of urban and rural differences, which is one form of geographic diversity. This type of geographic diversity focuses on the variation among individuals from urban, suburban, and rural cultures. Geographic diversity can take another form when thinking about intra-racial and interracial
cultural differences. That is, individuals who are considered members of the same race based on their skin color and/or appearance, as well as those who are of different races, often have very different cultural practices. These differences stem from the fact that individuals, regardless of race, come from various geographic locations all over the world, each of which has its own unique culture.

So What?

Rural and urban diversity is a genuine topic of concern. Substantial variation between these geographic groups has been reported in the literature. Glenn and Hill (1977) revealed that rural individuals tend to have more conservative and religious views than urban while urban individuals tend to have more liberal and less religious views than rural. A new pattern in rural populations emerged more recently; immigrants to the United States are choosing to live in rural areas more so now than ever (Waldorf, Florax, & Beckhusen, 2008). Cultural and economic differences between urban and rural individuals were identified as the source of higher rates of child psychopathology in urban children (Zahner, Jacobs, Freeman, & Trainor, 1993). These findings support the notion that urban and rural geographic diversity is real and exists in various forms. In educational settings, it is important to keep this sort of diversity in mind to ensure that the individual needs of each student are met and interactions with students and their families are smooth, regardless of their background.

The intra-racial and interracial forms of geographic diversity mentioned earlier present yet another set of issues to consider. In the United States, people tend to group individuals together and make generalizations about them based on race. For instance, black immigrants from the Caribbean, Africa, and Central and South America all tend to be grouped together as Black Americans while their individual values, cultural patterns, and attitudes are ignored (Caldwell-Colbert, Henderson-Daniel, & Dudley-Grant, 2003). The cultures found in different geographic locations make these Black Americans unique. Thus, when this sort of diversity is encountered in schools, it is imperative that educators make an effort to be aware of the unique culture that each student and his/her family represent.

Now What?

Now that you see the importance of being sensitive to various forms of geographic
diversity, what comes next? As an educator you can set an example for others by
learning about the cultures associated with different regions, especially those of your
students and their families. Making an effort to understand their values and customs,
though they may be different from your own, will help you communicate and interact
with them more effectively. Your openness and sensitivity to cultural issues will show,
and will make it possible to build good relationships with your students and their
families.

To begin the learning process, you can start by going through the following case study.
It is a good example of how cultural insensitivity can make for unsuccessful interactions
between educators and families. You may even want to go back through the first case
study now that you have a better understanding of geographic diversity. It will be
helpful to think about the discussion questions thoroughly for each case study as well.
The list of resources at the end of this section should provide you with some good
information about geographic diversity and how to deal with it, as well as ideas for
incorporating cultural lessons into your teaching.

**Case Study: The Duttons**

Mrs. Watson is a kindergarten teacher at Burb Elementary School. Burb
Elementary is a small suburban school. The school environment is not very racially or
ethnically diverse. This year is Mrs. Watson’s second year teaching at the school. Last
year, all of her students were white and most of them came from fairly wealthy families.
This year, her students are once again white and mostly from middle or upper class
families.

The Duttons are a black family that has resided in the city for the past several
years. Mr. and Mrs. Dutton decided to move their family to a suburb outside of the city
so that their three children could receive what they felt would be a better quality
education. They have now enrolled their daughter, Aniyah, in Mrs. Watson’s
kindergarten class at Burb Elementary.

Two months after Aniyah joined Mrs. Watson’s class, Mrs. Watson decided to
have the students and their parents participate in what she calls an “Ethnicity
Celebration.” Mrs. Watson held this celebration last year and it went very well; students
and their parents shared the food and traditions of everyone’s ethnic background
including Italian, Irish, and German. In preparation for this year’s celebration, Mrs.
Watson is calling the parents of each of her students to ask for their assistance with and participation in the event.

When Mrs. Watson called the Duttons’ home, Aniyah’s older brother Zac answered the phone, “Hello, Dutton residence.”

Mrs. Watson responded, “Oh hello, this is Mrs. Watson from Burb Elementary School. May I speak with Mr. or Mrs. Dutton please?”

“Yeah, sure,” Zac said. “Hold on one moment.”

Mrs. Dutton answered, “This is Aniyah’s mom. What can I do for you?”

“Hello there. I’m actually calling about an event that I’m planning for the students and their parents. I’m contacting all the parents to see if they would be willing to participate and help out. The event is an ‘Ethnicity Celebration.’ Basically, I’m trying to demonstrate to the children that diversity is something to celebrate and enjoy. I’m asking the parents to contribute a representative dish, along with coming in to talk about the traditions of the ethnicity they represent. So, would you be willing to discuss your African heritage for our celebration?”

Mrs. Dutton paused. Then, in a rather aggravated tone, she said, “I think you are a bit mistaken. Not all black people are African! Mr. Dutton and I are originally from Haiti. Being Haitian and being African are two very different things. And, to be honest, I’m quite surprised that you of all people would make that mistake. I would think that being a teacher, you would be more sensitive to these kinds of issues. I mean, how are you supposed to be teaching the children about ethnicity when, you seem to know nothing about it! I’m sorry; I didn’t mean to raise my voice. But you should know that so-called ‘African-Americans’ in the United States have a great deal of geographic diversity. Some do come from Africa, but many of these people come from places like Central America, South America, and the Caribbean, like us. The point is that we don’t identify ourselves by our race; we identify ourselves by our ethnicity, which is Haitian- not African-, American.” Mrs. Dutton then hung up the phone.

Mrs. Watson was speechless. She couldn’t believe how insensitive she had just been to Mrs. Dutton. Thinking back, she now realizes how ignorant she has really been about ethnicity and diversity and feels terrible. After such an uncomfortable exchange, she questions whether or not she should do the Ethnicity Celebration at all.

Discussion Questions:

1. What could Mrs. Watson have done to prevent the mistake of making
assumptions about the Duttons’ background?

2. How could Mrs. Watson have handled asking for the Duttons’ help and participation in the Ethnicity Celebration differently?

3. What could be done to alleviate the tension caused by this uncomfortable conversation between Mrs. Watson and Mrs. Dutton?

4. Do you think the conversation between Mrs. Watson and Mrs. Dutton will affect Aniyah’s relationship with her teacher? How so? What could be done that would result in maintaining positive parent-teacher and teacher-student relationships?

Suggested Resources:

Books

This book offers excellent information about rules for effective communication with individuals from other cultures and regions, including a section specifically on classroom behavior.

This book contains a collection of chapters on different cultures, races, and forms of diversity. Each chapter provides insightful information about various aspects of the culture, race, etc. in focus.

Children’s Books

This book showcases the diversity in staple foods and lifestyles of people from different nations.
This book is divided by continent and features pictures of children from all around the world. Each child’s picture is accompanied by additional pictures and information about his/her culture, food, school, family, and housing.

**Video**

This video is for second grade students and explains the differences between urban, suburban, and rural.

This website lists several educational activities that can be done with elementary school students to raise awareness and acceptance of diversity.
Chapter Four: Faith Not Assumptions

Case Study: Akeem

“Akeem, it’s time to wake up!” his mother screamed up the stairs.
Akeem rolled slowly out of bed and walked over to where his clothes were
placed the night before.
As he got dressed, his mother added, “Hurry—we are going to be late. You
don’t want to be late for your first day of school.”
Akeem finished dressing and walked slowly down the stairs.
“We don’t have time for breakfast,” said his mother, then, “is something the
matter with you this morning?”
Akeem responded, “No,” as they got into the car and drove off.
Once at school, Akeem’s mother kissed him on the forehead, told him to have a
good day, and then hurriedly drove off.
It is Monday morning and, like every other morning, Ms. Jacob’s 3rd grade class
took their seat to begin homeroom. Akeem took a seat in the back of the class. Ms.
Jacob stood in the front of the room to greet the class.
“Good morning, class,” she said.
The class responded simultaneously by saying, “Good morning, Ms. Jacob.”
“We have a new student here today with us. Please everyone join me in
welcoming Akeem.”
In unison the class responded, “Welcome Akeem!”
“Who would like to pass out the pledge handouts today”, she added.
Akeem sat quietly as no one had responded to the request.
“Why do we have to say this every day?” Akeem said to another student. “What
if you don’t being in God.”
Annoyed by Akeem’s side conversation with his peer and the lack of volunteers
in class, Ms. Jacob interjected with, “Akeem would you like to pass out the Pledge of
Allegiance today?”
Akeem did as he was told and then took his seat. The whole class stood and
began to recite the pledge. Akeem, however, remained quietly seated. When Ms. Jacob
noticed that Akeem was not joining the group in reciting the pledge, she told the class
to stop.
She said from the front of the room, “Do you have trouble reading, Akeem?”
All the kids in the class began to snicker to themselves and stared at Akeem. “I don’t say the Pledge of Allegiance,” he responded. Before he could attempt to explain further, Ms. Jacob added, “Well then, you’ll just have to go to the principal’s office because I don’t tolerate acting out and not following the rules in my class.” Akeem was very upset and embarrassed. He stood up and walked by all his laughing peers. Akeem walked out of the door vowing to never step foot in that class again.

Discussion Question:

1. Is there anything that Ms. Jacob could do to help support this student?
2. Should Ms. Jacob require Akeem to say the Pledge?
3. Why do you feel Ms. Jacob reacted the way she did?
4. Was there anything Akeem could have done differently in this situation?
5. What would you have done in this situation if you were Ms. Jacob?

What?

Religious diversity is one type of diversity that discriminates against someone strictly because of his or her religious beliefs and practices. Religious and spiritual beliefs take on many different forms for many different groups. Spirituality can be defined in many ways and, in many cases, is left up to the individual to define. It is most often defined as something that gives meaning and purpose to life. Religion usually involves a specific set of beliefs and values that are agreed upon by individuals who collectively participate in that religion. Religion usually includes a supreme being. Some people use the words spirituality, religion, and faith interchangeably but they all involve relationships and are a contributing factor to one’s heritage.

So What?

So, why is it important to bring awareness to religious diversity? It is a known fact that classrooms are becoming more and more diverse. “During the 21st century, children of traditionally under-represented groups, often called minorities, will constitute a new majority within the United States” (Kirmani & Laster, 1999). This is important for both students and teachers to realize. “Children of different cultures learn, play, interact with peers and adults, and view teachers in different ways” (Kirmani & Laster, 1999). Therefore, students must learn how to participate effectively with students of different
backgrounds and teachers must prepare themselves to meet the needs of these students. Only when students become more aware of religious diversity will they acquire the skills needed to be culturally sensitive to differences and develop meaningful relationship with others. With the separation of church and state topics of religion are just not discussed. Teachers are afraid to discuss the content and students latch on to false information. “In our global society, it is more important than ever to know about and understand the religious beliefs of others” (Passe & Willox, 2009). In becoming aware of religious diversity, it is very important that teachers assess their own attitudes and beliefs. Through creative changes in the curriculum, teachers can help their students grasp the benefits of a multicultural education. By doing this we, as educators, promote a happier, safer and more productive environment for our students.

Now What?
It is time to work towards creating a classroom that is receptive to religious diversity. As mentioned above, it is important that teachers be prepared to teach the content, and there are a lot of programs and teaching tools like this one that set out to do just that. There are also resources to help with incorporating diversity awareness in the classroom.

Case Study: Ms. Johnson
Ms. Johnson’s watch reads 3 o’clock as she races to pick her son up from school. She quickly pulls up to the curb as Akeem slowly walks to the car. Noticing a frustrated look on his face, Ms. Johnson asks, “What’s the matter?”
He replies, “Nothing, can we just go home?”
When they got into the house, Akeem threw down his book bag and handed his mother a note before heading to his room. Ms. Johnson opened the note to find a request from Akeem’s teacher to meet with her tomorrow morning.
“Akeem, what is this about?” she screamed up the stairs.
“I got kicked out of class today for not believing in God,” he responded. “Can we please talk about this later mom? I’m very tired.”
Noticing that he was still very upset, she decided to just let it go until tomorrow.
When morning came, she tried to wake Akeem up for school but he told her that he was sick. She had no time to argue, so she hired a sitter and hurried off to meet with Ms. Jacob before work.
As Ms. Johnson entered the classroom, she was greeting by Ms. Jacob.

“Hi, thank you so much for meeting with me on such short notice. I am Ms. Jacob.”

“Nice to meet you,” responded Ms. Johnson.

“I’m glad you could make it,” added Ms. Jacob.

“Yes, well Akeem came home very upset yesterday, so as you can imagine I’m quite concerned,” said Ms. Johnson.

“I know you have to rush off to work, so I’ll get to the point. At some point in the year I do like to meet all of my children’s parents but I thought you might like to meet early since I’ve been having some issues with Akeem,” said Ms. Jacob.

“What kind of issues?” asked Ms. Johnson.

Noticing the agitated look on Ms. Johnson’s face, Ms. Jacob blurted out, “I just thought you would be concerned that Akeem seems to have trouble reading and following directions.”

“What?!” exclaimed Ms. Johnson.

“I thought we could work together to figure out what to do about Akeem’s behavior in class. Does he have any other difficulties?”

“What did he do?” said Ms. Johnson, visibly agitated. “I can’t believe what I’m hearing. Akeem is a good student.”

“Well, his behavior yesterday during the Pledge of Allegiance showed otherwise,” said Ms. Jacob. “He refused to participate and follow directions.”

“No wonder Akeem was so upset yesterday!” said Ms. Johnson. “Did you even give him a chance to explain himself? Did you try talking to him before you kicked him out? I have taught Akeem to be proud of his religion and for that reason he did not say the Pledge. To Pledge something under God would be against our religious beliefs. I have never been so angry in my life. This school may not be the right place for my son.”

Ms. Johnson stormed out of the door.

Discussion Questions:

1. What assumptions did Ms. Jacob make about Akeem and about his mother?
2. How would you have handled this situation?
3. How would you feel if you were Ms. Johnson?
4. What can Ms. Jacob do now to re-engage this parent?

   film focuses on in terms of different religions.
**Chapter Five: Pink or Blue?**

### Case Study: Sai Pi

Sai Pi recently moved to an urban school district from a refugee camp on the Thailand-Burmese border. His new fifth-grade classroom is a far cry from the familiar open-air classrooms in Thailand. Because the Shan people were never formally recognized as refugees, Sai Pi’s family received little help or monetary assistance from the national organizations and charities. They left their country with only the clothes on their backs. When they arrived in Pittsburgh, they depended on refugee organizations for housing and clothing, which are mostly second-hand. With help from his ESL teacher, Sai Pi quickly learned to talk with his classmates.

Sai Pi tells his teacher that he now likes school.

There are new books and pencils and paper to write with. Computers are the best. In gym class, Sai Pi runs and jumps as well and better than some of the other students. One of his classmates, David, sees how well he can kick a soccer ball.

“Sai Pi, why don’t you come and try out for our neighborhood soccer team? I think you could help our team make the playoffs.”

Sai Pi thinks for a moment and replies, “OK, I will ask my parents if I can play. When are the tryouts?”

David looks over to Daniel leaning against the volleyball net and yells excitedly, “Dan we may have another good player for our team. Sai Pi is going to see if he can try out for our soccer team. Coach Jim will do back flips with a player this good. When is our next practice Dan?”

Daniel responds, “Tonight at 6:00 pm at the Schenley Park soccer field.”

Sai Pi goes home after school and gets permission from his parents to try out for the team. They believe that playing soccer will strengthen Sai Pi’s friendships with his classmates as well as boost his confidence.

Sai Pi gets ready for the tryout. He and his mother walk to the park to meet the team. David and Daniel are standing together at the water fountain when Sai Pi arrives.

David looks at Daniel and they both start to giggle.

“Hey Sai Pi, what’s up with the outfit?” they say.

Sai Pi does not know what is going on. Three of David and Daniel’s teammates walk over and start to laugh out loud and point their finger at Sai Pi’s clothing. Sai Pi is
wearing a pink t-shirt with a daisy on the chest. Sai Pi and his mother have no clue why 
the soccer team is laughing at them.

Coach Jim walks over to the water fountain to find out why his soccer boys are 
laughing. He has a smirk on his face when he greets Sai Pi and his mother.

Coach Jim blows his whistle and yells, “You think that’s funny? Everyone! Four 
laps around the field and twenty-five pushups. Now.”

Discussion Questions:

1. Colors have different meanings in each culture. Why would Sai Pi wear a pink 
top to soccer try outs?
2. With soccer being an international sport, what could Coach Jim have done to 
redirect his team from laughing at Sai Pi?
3. Blue is for boys and pink is for girls. Can you name some colors that have 
connotations in western cultures?
4. As David’s parent, what could you have done before the practice to help prepare 
Sai Pi to play on this team?

What?
Gender stereotyping, cultural factors, parental expectations, and student learning styles, 
are factors that impact male and female attitudes towards math and science classes and 
later career choices in those fields.

Males and females attending elementary, middle school, and high school learn by using 
a variety of preferred learning styles. Recognizing environmental, biological, 
sociological, and physical variables that impact their learning can have a positive 
outcome for both girls and boys.

According to the 2007 National Assessment of Educational Progress math test of fourth 
grade and eighth grade students, girls are 2 points behind boys (Snyder, 2009). Results 
of the 2005 National Science Test indicate that girls’ science test scores lag behind boys 
in fourth grade by 5 points, eighth grade by five points, and twelfth grade by five points 
(Snyder, 2009). Females continue to be under-represented in mathematics, physical 
science, and engineering-related professions. Women who hold degrees in science and
engineering are less likely than men with similar degrees to actually be employed in these fields, constituting 23% of the science and engineering labor force (NSF, 2000).

So What?

Girls and boys are different and they have different learning style preferences. Traditional learning style preferences were created by respected male psychologists that used middle and upper class white male students as their subjects. Educators using these traditional styles do not educate boys and girls equally. Over the past 25 years volumes of research have been conducted on individual learning styles. The research has proven that males and females prefer to learn in a variety of ways (Tripp & Moore, 2007). Identifying the style preferences of the students will maximize their learning and will have positive effects. Teaching girls and boys by using their preferred learning styles will aid in narrowing the gap in math and science test scores. The Learning Style Inventory by Dunn and Dunn is one of many assessment tools that provide a detailed evaluation of the way students prefer to learn (Honigsfeld & Dunn, 2003). This assessment tool surveys students learning styles in different areas. The LSI model asks students their preferences in the following areas:

- Environmental: noise versus quiet, cool or warm room temperature, bright or low classroom lighting.
- Sociological: learning alone versus with a peer, study in groups.
- Physical: visual, tactile, kinesthetic, auditory senses; moving versus stationary, dietary intake, and time of the day.
- Psychological: analytical, global, and cerebral.

Listed below are some learning style preferences cited in the literature with regard to male and female learners. While one cannot generalize across all males or all females, these observations warrant consideration.

Male learner preferences may be more visual, tactile and kinesthetic. Males may work better with peer motivation. Boys may prefer moving at their desk and moving around the classroom, standing more than sitting. In addition, boys’ attention spans may be shorter than girls.
Female learners may prefer auditory lessons. Girls may work better in groups and prefer a quiet environment when studying. Girls may excel at self-motivated, parent-motivated, and teacher-motivated tasks. Girls may listen to and obey authority figures more often than their male classmates, and may be more persistent and more responsible at completing tasks (Honigsfeld, Dunn, 2003).

Girls and boys are socialized in their home environment by many sources. Parents, relatives, peers, and toys all play a part in the development of children long before they attend school. Parent expectations for their children are present in the activities they have their child participate. For example, boys are encouraged to play football, have toy fire trucks, building blocks, and erector sets that develop a child’s analytical and spatial skills. Girls, however, play slo-pitch softball and play with tea sets and dolls; these activities may promote the development of socialization skills. In Damarin’s study (as cited in Murphy, P., 2001), Gender and the learning of fractions (1990), Damarin observed the different toys preferred by girls and boys. Boys had toys with geometric shapes and various parts that connected together. These toys allowed for the development of part-whole relationships and math fractions. Girls’ toys were of a social context, such as tea sets and baby dolls, which promoted and developed communication and correspondence.

Children see the world through their past and they learn from their experiences. Children raised in a gender-bias environment may have conflict with their academic interests in math and science and career choices in these fields after high school. Girls may be at a disadvantage because they do not have the math and science learning experiences that boys have playing with blocks and shapes.

Traditional and cultural gender roles still exist in the home environment. Factors affecting females’ education include parents having a lower expectation level for their daughters than their sons. In some cultures, girls are expected to marry at an early age, become pregnant, and raise a family. Boys are raised to be wage earners, while girls are raised to be homemakers, resulting in success at school as a lower priority for girls. Girls have been shown to have less confidence in their math abilities, which has resulted in negative attitudes towards math. A 1990 study by the American Association of University Women highlighted the trend of girls becoming less confident of their
math skills (AAUW 1992). Recent educational efforts have sought to overcome these barriers.

Teachers’ gender stereotypical biases of girls in math and science education are small but persistent (Forgasz, 2003). Some researchers have determined two distinctive types of sex bias in school. Boys receive more attention and time to discuss issues with the teachers, and boys get more praise and positive responses from the teacher (Sadker, Sadker and Klein, 1991). Boys may get called on more because they are more active and teachers believe they are better at math. Having fewer response opportunities might reduce a girl’s motivation to future math classes and career choices.

Now What?
It is critical that teachers recognize the differences that exist among males and females in the classroom. For educators, it is important to understand each student’s learning style. Designing and presenting lessons using multisensory-stimulating techniques is imperative. Adapting lesson plans to the student’s preferred learning style will increase student test scores. Here are some ways that an instructor can adapt the classroom to accommodate each of the preferred learning styles of their students.

- Create a physical setting in which children want to learn. Examine the classroom temperature and lighting. Research has noted that some children prefer learning at warmer room temperatures. Let those students wear a sweater in class. Some students prefer softer lighting than the florescent lighting that is found in most traditional classrooms. Turn off the lights and teach with the sunlight shining through the windows when that is feasible.
- Some research has indicated that females prefer learning in the early morning. Rotate the time of day the subjects are taught. Math and science taught Monday morning, and then rotated to Tuesday and Thursday afternoon. The schedule rotation allows all the students work on different subjects at their preferred time several times during the week.
- Female students may be more self-motivated, responsible, persistent, and authority oriented. Girls may prefer working with partners and peers. Partition an area of the classroom where the students can work in groups while providing specific directions for the tasks.
• Boys may prefer tactile, kinesthetic and visual learning lessons. When designing
lesson plans, include strategies and tactics where boys can see and hold onto
objects to simplify abstract concepts. Use counting blocks or peg boards with
rubber bands to help children understand counting and learning multiplication
tables. When teaching the class fractions, for example, hand out cardboard pizza
slices in various fractional sizes to allow the students touch them and put them
together.
• Boys tend to prefer more mobility in the class. They may not want to sit still for
long periods and concentrate on the task. Within the classroom rules of behavior,
permit both boys and girls to stand up at their desks to complete their
assignments and to have physical breaks throughout the day.
• Several researchers have noted that female teachers have a soft voice, but boys
are not good auditory learners. Accordingly, boys may quickly lose
concentration because they cannot hear the teacher, and then boys may become a
discipline problem. This situation makes it less likely those students will grasp
the topic being discussed or will not participate in the learning. Consider sound
amplification or try to reduce the external noise from the class.
• Give students a cup of ice or water at their desk, to keep them well hydrated and
curb any desire to eat candy or chew gum in the classroom.
• Choose instructional materials that are unbiased. A better alignment between a
student’s learning style and a teacher’s teaching style will result in better student
performance and better understanding of concepts.
• Provide students with a variety of options and methods for problem solving. A
wide range of techniques are available to students to assist in problem solving.
Promote students creativity and curiosity which leads to solutions. Encourage
and challenge students to think unconventionally or use different perspectives.

Utilizing these various techniques and assessment tools will improve the student
classroom performance; however, individuals develop differently and are at different
developmental stages in the same grade. Teachers must periodically review their
students’ learning styles because changes occur as students mature. Teachers in the
classroom must recognize that although these learning style preferences exist, all
children learn in their own way. Identifying the different ways students learns will help
them through difficult learning situations. No matter the gender of the student, the
teacher must teach to the uniqueness of the learner.
Teachers also must look at their own learning style preferences, beliefs, value system, biases, assumptions, and attitudes towards their students. Teachers must reflect on their backgrounds to find gender-bias in their own upbringings to provide an unbiased learning environment.

Teachers and parents must avoid limiting their children to sex-roles and gender-stereotypes through academic an extracurricular activities. Positive role models should be identified and promoted for both females and males. Meeting the environmental, biological, sociological, and physical variables in learning style preferences creates a positive learning climate in the classroom. Eliminating teacher gender bias and changing parental stereotypical views of their children will reinforce girls’ and boys’ positive attitudes and perspectives of math and science classes. Changes of this nature are necessary to broaden the educational and career opportunities for females.

**Case Study: Ali**

The Henderson family waited in traffic for thirty minutes at the entrance to Yellowstone National Park. After waiting for ten minutes, the youngest member of the family, Ali, put down the SAT study guide she was reading and picked up the National Parks brochure and began reading about the eruptions of the geysers in the park. In the brochure was a paragraph from the park’s ranger commenting on the consistency of Old Faithful.

“Dad, this book tells us when the geyser will erupt. This brochure also lists the times the geysers will erupt and it tells us when and where we can see the bears, moose, and bison,” exclaims Ali.

“Ali, are they the only things to do here?” asked her older sister Lindsey.

“There are also hundreds of annoying mosquitoes waiting to attack us,” Ali sarcastically replied.

“And if we wake up early, we can see foxes, antelopes, boiling mud pots, and hot springs,” she added.

“But there’s no internet or phone reception!” cried Lindsey.

“No internet anywhere in the park, but cell service where we are staying,” Ali said.

“Let’s go home,” said Lindsey.
Mrs. Henderson reassured Lindsey that she would survive the park without the internet for three days.

Ali and her family arrived in the parking lot next to Old Faithful just as it finished spouting boiling water. It would be another ninety minutes before the next eruption, so she and the family decided to walk around and explore the area for moose.

They were unable to find any wildlife in the thermal areas next to the geysers, so the family walked back to Old Faithful. As if on cue, the geyser began to percolate a little water at its base. Next the water shot out of its hole five feet high, then twenty-five feet high, then one hundred feet in the sky—in total, the eruption lasted for three minutes.

Ali sat watching the geyser and pondered how scientists could use the heated water. She spoke first to her father, “Dad, you know, the geysers in the park really look like a solution to our energy problem. Just look at the all heat and steam from the water. See how high the water is shot into the sky. Something down there is producing a lot of energy to send it up that high.”

“Ali, how would we harness the power of the geyser without losing the beauty of this park?” he asked.

“But think about how many homes this one geyser could heat,” Ali replied. “Mom, wouldn’t this geyser save a lot of water and energy if it was connected to our dishwasher and clothes washer?”

“What about me burning my hands when I wash my drinking glass in the sink at night?” Lindsey said sarcastically.

Ali’s father looked away from the geyser towards her and noticed that she was completely mesmerized.

For the rest of the trip, Ali asked park rangers detailed questions about the boiling mud pots, and the steaming hot pools. She decided that she would research this topic for her long term project in school this coming school year.

This wasn’t out of character for Ali. She was a member of her schools science teams Think-a-thon in fourth and fifth grade. In fifth grade she was an alternate member of the “24” team, a game in which participants are given five cards with numbers on them and contestants have to arrange the cards to equal 24.

In her middle school years, she participated in the Junior Science Program in seventh and eighth grade. She was elected to the National Junior Honor Society in eighth grade.
Ali returned to school that August, well prepared for her rigorous schedule of advanced honors courses. She had read all of the required summer readings. Ali enjoyed school and was always prepared for class. Ali’s freshman English teacher, Ms. Sweeny, was impressed with Ali’s scholastic abilities and nominated her for the National Honor Society.

The first day of school in calculus class, Ali’s teacher, Mr. Ward, lectured for thirty minutes with no breaks, then wrote mathematical notations on the board for ten more minutes. Mr. Ward conducted his class this way every day. At the end of the first week, Mr. Ward assigned five problems for homework. Ali began her homework that evening, and solved three of the problems. She had some questions about how the two remaining problems should be set up, so she did not answer them. The next day, Mr. Ward collected the homework assignments and began lecturing. After class, Mr. Ward approached Ali to discuss the homework problems she did not complete for the assignment.

Looking down at Ali, Mr. Ward said, “Ali, this is an advanced course that most students don’t take until their junior year. If you can’t do these simple problems, you’re going to be in over your head later on. There’s no shame moving to a less demanding course.”

“Mr. Ward, I believe I can do this kind of math. I just need to know how to setup the problems to solve them,” said Ali confidently.

“Ali, no one else in this class has missed the homework questions, I’m very concerned that you won’t be able to keep up,” replied Mr. Ward.

“I want to stay in this class, Mr. Ward,” Ali emphatically stated.

At home that evening, Ali’s parents were sitting at the dinner table discussing the new school year with their daughter. Ali talked about how she liked all of her classes and teachers. Well, she liked some teachers better than others. She brought up the issue she had with Mr. Ward. Ali stated with resignation that she would move down to a lower level of math because Mr. Ward was convinced that she would soon fall behind in his class. Ali’s parents were startled to hear about her moving down a level so soon in the school year. Ali excelled in math. She tested out of several basic courses in middle school. She was invited by the local university to participate in an advanced math program during the summer. Ali had only given the class a week to see how she would perform, and she was already planning to drop it? Ali’s parents decided to speak with Mr. Ward, so they scheduled a parent-teacher conference.
The Hendersons arrived at the school and introduced themselves to Mr. Ward then asked what the problem was. “Your daughter is failing my class,” Mr. Ward stated bluntly. Ali’s parents were stunned. “Ali is gifted, to be sure, but I don’t think she has what it takes to succeed in calculus, at least not now.”

“But it’s so early in the school year—how is she failing already?” replied Ali’s mom. “What seems to be her problem? Is she cutting class or falling asleep at her desk?”

“She isn’t performing up to my standards on the homework assignments and class participation. She failed a quiz on material covered in class. I think the best thing for Ali would be to move to a less rigorous course. I’m sure she could do quite well in Ms. Casatio’s class,” Mr. Ward asserted.

“What is the issue with her homework?” asked Ali’s mom. “Is she not doing it? I can get a tutor for her if she is behind.”

“She turns in her work, but it is always incomplete,” he replied. “And she sits staring blankly at the board during class.”

“Mr. Ward, she has told us she left only two of the homework questions blank because she wanted to speak to you about how to setup the problem,” said Ali’s mom. “If she had trouble with those two problems she will never succeed in my class!” exclaimed Mr. Ward. “I use these early grades as a sort of litmus test. Those two questions and the quiz tell me which students will make it through my class. I’ve been teaching math for thirty years now—students who cannot handle the simple problems early in the course end up failing when we cover more complex material. Yesterday, I tried having Ali work in a group with the two other girls in this class, but they just talked to each other. Don’t waste her time in my class. Ali is talented. She can possibly be successful in another subject but she will fail in calculus.”

Discussion Questions:

1. As Ali’s parents, should they immediately discuss Mr. Ward’s premise of Ali’s failure to perform with the schools’ principal?
2. Are Mr. Ward’s wall posters promoting diverse role models for students who aspire to become mathematicians and scientists?
3. Is Mr. Ward’s teaching style satisfying the learning preferences of all students in his classes?
4. Why does Mr. Ward stereotype Ali as a failure so early in the school year?
5. As Ali’s parents do you believe it would better serve Ali and agree to move her to a lower level class or would you let her remain in Mr. Ward’s class to see if she can improve as the year progresses?

6. Mr. Ward has thirty years teaching experience, would you recommend he attend professional development courses in cultural diversity?

7. Should the Henderson’s seek to have Mr. Ward retire because he is too set in his ways and is not an asset to the teaching profession?

Suggested Resources:

Films

True story based on a math teacher in East L.A. who develops an Advanced Placement calculus program for low socioeconomic students. The student’s high score on the test prompts insinuations of cheating.

In 1998 filmmaker Helen de Michiel got together with several young women majoring in the sciences, engineering, and math at Ohio State University in Columbus. They agreed to meet regularly over their next three years of college, and create a community to share experiences and struggles as women stepping into traditionally male domains. This documentary reveals how women are finding new ways to honor their own growth, motivations, and experiences as they imagine how to make the science and technology workplace a comfortable environment for women to stay in and influence.

*A League of Their Own,* [Motion picture]. Directed by Penny Marshall.

This film is about an all-female baseball team during the Second World War. This film follows the stories about the team of females and their perspective on life and society (as women) during this time in history.

Frankie is a former boxing manager, who initially refuses to train Maggie due to her gender and age. With her talent and his coaching, the spirited young fighter
rises through the ranks of women's boxing; the pair forms a touching bond in the
process.

Straightlaced-How gender got us all tied up, [Motion picture].Directed by Debra Chasnoff.
The first feature-length documentary and educational campaign to explore how
gender expectations limit the lives of all teenagers.

Books

Gender, youth and culture: Young masculinities and femininities by Anoop Nayak and Mary
Jane Kehily.
This book is about the making and unmaking of gender. It addresses the social
topic of how boys become men and girls become women. Drawing upon richly
textured ethnographic insights and international studies, this original volume exploress how gender is produced, consumed, regulated and performed in young
lives.

Situated lives: Gender and culture in everyday life, edited by Louise Lamphere, Helena
Ragoné, and Patricia Zavella.
Twenty-six feminist and critical essays that discuss the impact of global
capitalism and post-colonial social structures on women’s’ and men’s’ bodies,
their families, and work lives.

Girls think of everything: Stories of ingenious inventions by women, (Catherine Thimmish).
An outstanding collective biography of women and girls who changed the world
with their inventions. Thimmish surveys unique and creative ideas that were
born of necessity or were simply a product of ingenuity and hard work. Included
are Bette Nesmith Graham, who invented Liquid Paper, known more commonly
as "white-out,” and Ann Moore, who emulated the way African mothers carried
their babies to create the Snugli.

Girls who rocked the world: Heroines from Sacagawea to Sheryl Swoopes, by Amelie Welden.
Thirty-three short biographical sketches of young women who achieved
"something extraordinary" before age 20. The entries are in chronological order,
beginning with Cleopatra and ending with tennis star Martina Hingis. Some of
the names are familiar (e.g., Helen Keller, Anne Frank, and Wilma Rudolf), while others are less well known.

*The mommy book* by Todd Parr.

Moms are celebrated here; a variety of mothers with short hair and big hair, driving minivans and motorcycles, swimming and dancing, and hugging and kissing their children.

*The crayon box that talked*, by Shane DeRolf.

Although there are many different colors, the crayons in a box discover that when they get together they can appreciate each other and make a complete picture.

*Chrysanthemum*, by Kevin Henkes.

Chrysanthemum thinks her name is absolutely perfect, until the kids at school make fun of her.

**Organizations**

Alpha Kappa Alpha Sorority (AKA)
http://www.aka1908.com/

World’s oldest college-based sorority founded by black women. Sorority members conduct workshops on subjects of general interest such as problems of black women in the job market.

American Association of University Women (AAUW)
http://www.aauw.org/

The oldest and largest national organization for the betterment of woman. It produces numerous publications on sex equity and Title IX.

Association for Women in Science (AWIS)
http://www.awis.org/

The AWIS promotes equal opportunities for women entering the sciences and attempts to help them reach their goals. It provides funding for pre-doctoral awards through its educational foundation and testifies on sex discrimination matters before congressional committees. The Association for Women in Science
is dedicated to achieving equality and full participation for women in science, technology, engineering and mathematics.

Business and Professional Women’s Foundation (BPW)
http://www.bpwfoundation.org/
The BPWF carries out an integrated program of research, information, dissemination and education to improve the quality of working life for women. It assists high school age women in assessing future occupational possibilities.

Center for Women Policy Studies
http://www.centerwomenpolicy.org/about/default.asp
Was founded in 1972 as the first feminist policy analysis and research institution in the USA. For more than three decades, the Center has brought the voices and needs of women and girls to major public policy debates on such issues as: equal credit opportunity, educational equity, violence against women and girls, welfare reform, work/family balancing and workplace diversity policies, reproductive rights and health, the women’s HIV/AIDS epidemic, access to health care for low income women.

National Association for Multicultural Education (NAME)
http://www.nameorg.org/
A national organization that brings together professionals from all academic disciplines and from multiple levels and types of educational institutions and occupations with an interest in multicultural education.

National Center for Fair and Open Testing (FAIRTEST)
http://www.fairtest.org/
The National Center for Fair & Open Testing advocacy group advances quality education and equal opportunity by promoting fair, open, valid and educationally beneficial evaluations of students, teachers and schools. Fair Test also works to end the misuses and flaws of testing practices that impede those goals. We place special emphasis on eliminating the racial, class, gender, and cultural barriers to equal opportunity posed by standardized tests, and preventing their damage to the quality of education.

Chapter Six: I Am a Person First

Case Study: Joseph
Joseph Sweeny is a five and a half year old boy who uses a wheelchair. He recently moved from Florida to Pennsylvania. Joseph’s father Frank was recently laid off from his job in Florida. The family has decided to move to Pennsylvania where both families of Joseph’s parents currently reside. Frank has been offered a job working for his father at a local shoe store. There are many transitions that the Sweeney family are encountering and Joseph is about to experience the biggest transition of all, his transition into his new school.

Joseph’s new kindergarten teacher, Mrs. O’Malley was uninformed of Joseph’s arrival until the morning he showed up. She was unable to prepare the other children or become knowledgeable about his physical disability. The short notice also left Joseph without his usual aide so a substitute aide assisted him throughout the day. So began a new experience for Joseph, his parents, and principal, teacher and fellow classmates.

It was a cold morning in the middle of January as Joseph entered his new kindergarten classroom with a smile. The principal, Mr. Murphy, pushed his wheelchair into the classroom and introduced Joseph to his teacher and fellow classmates. There was a surprised look on the children’s faces as they noticed something very different about Joseph.

Mr. Murphy said, “Good morning, boys and girls, this is your new friend and classmate, Joseph. Joseph just moved here from Florida, and is really excited to be a part of your kindergarten class. Boys and girls, please say good morning to Joseph.”

The children jumped to their feet, stopping what they were doing, and as a group they said, “Good morning Joseph.”

One girl then shouted, “Why are you in that wheelchair? I thought those were for old people! The only person I know who has one is my grandmother, and she needs it because she can’t walk.”

Mrs. O’Malley walked over to the student and said, “Shhhhh.”

She then walked back to Joseph, thanked Mr. Murphy and pushed Joseph over to the meeting rug. At this point Joseph’s substitute aide had arrived.

Joseph was looking around his new classroom, noticing how small it felt. He thought to himself, “How am I going to move my wheelchair around this classroom? I am going to hit everything. There are so many toys to play with but they are all on the
ground. I can’t even fit at those tables, they are too short, and so I can’t play with the toys on the table. I won’t be able to eat my lunch, draw pictures; I just won’t fit at those tables. I wish I wasn’t in this classroom. I don’t belong in this classroom. I want my old classroom with my old teachers and my old friends.”

Mrs. O’Malley continued her typical day. She introduced Joseph again and asked everyone to share their names and something special about them. Mrs. O’Malley had the children stand up, sit down and take part in the different songs and dances. Many of the morning activities involved movement, which meant that Joseph was unable to participate. Joseph’s smile and enthusiastic personality began to dwindle to a frown with constant looks to the ground. Mrs. O’Malley acted as if nothing was happening and that Joseph was just fine.

Joseph’s aide asked Mrs. O’Malley, “Why are you doing so much movement in your morning meeting when you have a child with a physical disability? He cannot participate at all.”

“I cannot just change everything I am doing. The other children will be confused. We have been in school since September. They are in a routine, and now it is mid-January. If I change everything now, they will all regress,” Mrs. O’Malley said.

The aide remained quiet, just sitting next to Joseph, trying to get him to participate by moving his arms.

After morning meeting it was time for centers. The children were permitted by Mrs. O’Malley to choose their own center. The centers consisted of a science table, dramatic play area, block area, art table, library center, a water table and table toy area. Each child ran to their favorite center, as Joseph remained in his chair on the carpet.

Mrs. O’Malley approached Joseph asking, “What would you like to play with Joseph?”

Joseph looked at Mrs. O’Malley with a blank stare, knowing he was not going to be able to do anything because his wheel chair could not fit in between the different centers.

Joseph said to Mrs. O’Malley, “I just want to watch, I don’t want to play right now. Can I just look at a book?”

Mrs. O’Malley said, “Sure, just let me know if you change your mind.”

Joseph remained on the carpet, quiet, pretending to look at his book, over and over again. Not one child approached Joseph to play, nor did Mrs. O’Malley encourage any students to include Joseph during centers. The children acted as if Joseph did not
exist. Joseph was relieved because he knew he was unable to fit in between the furniture. Because he had to stay in his wheel chair he could not play on the ground with the boys.

   After center time the children enjoyed a snack. As Joseph’s aide pushed him toward the tables, she realized that the tables were too low to fit his chair. As a result, Joseph had to sit next to the table as the aide handed him his snack. Joseph felt extremely displaced. He wanted to curl up into a ball and cry.

   Joseph kept looking at the clock thinking, “I get to go home when the big hand gets to the 12. That’s what Mommy promised.”

   After snack the children were to complete a work job. Joseph was excited.

   “Mrs. O’Malley, I love work jobs, what kind of work job is it?” he asked.

   Mrs. O’Malley said, “Joseph, please be quiet until the directions are given and please go sit quietly on the carpet.”

   Joseph again, looked down to the ground thinking, if I could only walk over to the carpet and sit like the normal kids. After the directions were given the children headed to their assigned seats to complete their job. Joseph was pushed by his aide to his seat. Again, Joseph was unable to fit at the table. His aide gave him a large book to press on while remaining next to the table. Joseph completed his work job. It was difficult because he did not have an ample amount of space to work but he was able to finish. Joseph looked up at the clock and realized that the big hand was almost on the 12, which meant he would soon get to go home. Joseph had never been so excited to go home. Usually he was sad at dismissal, but not at his new school.

   As the students’ parents arrived to pick up their children, Joseph waited anxiously in the back of the room. His teacher asked his aide to place him there so he would “not be in the way of the other children, as their parents picked them up.”

   Joseph did not mind, at this point all he cared about was going home and never coming back.

   Joseph saw his mother and screamed, “Mommy, mommy, take me home with you, I can’t wait to go home!”

   Mrs. Sweeny knew this was a problem and was anxious to get into the car to hear about Joseph’s first day at his new school.

   As the children were leaving they said things to their parents such as, “Mommy, look at Joseph, he’s the new boy but he can’t do anything because he has a big chair.”

   Or “Daddy, see that little boy, he is in our class, he just sits in that chair all day long.”
Mrs. Sweeny overheard these comments and was both disgusted and saddened. She was hoping Mrs. O’Malley would address these comments but she seemed to be busy with the other students and parents.

When Joseph got into the car, the tears began to roll down his face. He was so upset it was difficult for him to speak.

He rattled off things such as, “I can’t move around the classroom. I don’t fit. They do so many songs and dances and I can’t do them. I don’t like centers because I can’t play on the ground. I don’t fit at the tables because they are too short. The kids ignore me and pretend I am not even there. I hate my new school, I am never going back. They all look at me funny and ask me why I am stuck in my chair all day. Mommy, I hated it so much, please don’t ever make me go there again. I won’t go, never, ever, ever.”

Mrs. Sweeny knew she had a huge dilemma on her hands and she was going to talk to her husband that evening. After speaking with her husband, Mr. and Mrs. Sweeny came to the conclusion that they would request a meeting the following morning with the principal, teacher and aide. They felt Joseph’s needs were not being met, and they were extremely disappointed in the school for creating an environment that shunned their son.

Discussion Questions:

1. What is to happen next?
2. What changes/alterations will be made?
3. Where is Joseph’s IEP and why has the teacher not seen it, or if she has seen it, why is she choosing to ignore it?
4. Why was the teacher not informed sooner about the arrival of her student with a physical disability?
5. Why did the teacher allow the other students to ask questions and say comments but not address them appropriately?
6. Why did everyone ignore Joseph’s existence and act as if he was not a part of the class?
7. Overall, what can be done to remedy this extremely difficult situation?

What?
What is disability? Teachers in training should be aware and fully understand the meaning of the term disability. There are many definitions of disability and it is important to use a definition that is accurate and culturally sensitive. According to the Americans with Disabilities Act (ADA), (1990), “The term ‘disability’ means, with respect to an individual – (a) “a physical or mental impairment that substantially limits one or more of the major life activities of such individual; (b) a record of such impairment; or (c) being regarded as having such an impairment.” (P.L. 101-336, Sec., www.ucp.org).

There are definitions for specific disabilities under the Individuals with Disabilities Education Act (IDEA). The different suggested categories consist of, “Autism, Deaf-Blindness, Deafness, Developmental Delay, Emotional Disturbance, Hearing Impairment, Mental Retardation, Multiple Disabilities, Orthopedic Impairment, Other Health Impairment, Specific Learning Disability, Speech or Language Impairment, Traumatic Brain Injury and Visual Impairment Including Blindness”(NICHCY, 2009, p.2). States use the above guidelines to help them decide whether a child will receive free, appropriate public education (NICHCY, 2009). In order to be sensitive and understanding of children with disabilities, one must be aware of the definition and criteria of disability.

So What?
A teacher may wonder “why do I need this definition and how does this affect me”? It is important to be culturally sensitive in reference to disability. There are an increasing number of students with disabilities in the general classroom. Therefore the general education teacher must be knowledgeable on how to be sensitive to the student’s needs. “Over the years, there has been a notable increase of students with disabilities receiving instruction in general education classrooms” (White & Whitby, 2008, p.2). “…the most recent data indicate that about 55% of students with disabilities participate in general education classrooms 80% or more of the day, and another 24% spend 40% to 79% of the day in general education classrooms” (White & Whitby, 2008, p.2). Because these students are in the general education classroom, teachers must have an understanding of what disability entails, in order to create a least restrictive environment (LRE) that provides a free appropriate education (FAPE). It is the teacher’s responsibility to create this environment for the students. According to West and Whitby, “the standard of
least restrictive environment is intended to ensure that children with disabilities are 
educated, to the maximum extent ‘appropriate,’ with their nondisabled peers” (West & 
Whitby, 2008, p.2). Although special education teachers are often in the classroom 
tending to the needs of children with disabilities, general education teachers must be 
aware that it is also their responsibility to teach all students in their classroom. 

A classroom environment should be sensitive and accepting of all students’ needs. 
West and Whitby mention that “Section 504, which was enacted in 1974, prohibits 
discrimination in education (and many other areas) on the basis of disability when 
federal funds are involved and provides the right to reasonable accommodations in 
education” (White & Whitby, 2008, p.3). This may include having certain types of desks 
for students with physical disabilities (wheelchairs) and setting up the classroom so that 
students can maneuver around. Students have diverse learning needs. It is the 
responsibility of the general education teacher to plan for these learning needs. 
Children with disabilities should feel as though they are a part of their classroom 
community. 

Cultures view disability differently. Dennis and Giangreco state, “Researchers in both 
general education and special education have recently stressed the importance of 
providing services for individual students in culturally sensitive ways that respect, 
acknowledge, and promote their diversity and strengths” (Dennis & Giangreco, 1996, 
p.103). Being conscious, aware and educated on different cultures is important when 
dealing with families of children with disabilities. For example, according to Fenichel et 
al., Hispanic American families are very close to their extended family. Often they 
include their family in meetings and making important decisions. This is something to 
keep in mind when dealing with students with disabilities (Fenichel, et al., 1989). Be 
aware and understanding that many family members may be a part of the child’s 
educational experience. Ceil Belasco, an advocate for students with disabilities, 
believes a relationship should be created where the parent or guardian feels 
comfortable and confident speaking with the teacher (Ceil Belasco, personal 
special education is federally mandated and has gained increasing emphasis in recent 
reauthorizations of federal special education law: The Individuals with Disabilities 
Education Act (IDEA) (Bellinger et al., 2003, p.41). Parental involvement is mandatory;
teachers must involve guardians in the continual review of progress of their child. This
most often takes place during an Individual Education Plan (IEP) meeting. The general
education teacher is often present during these meetings. Teachers should develop a
relationship with parents where parents feel comfortable approaching the teacher with
comments or concerns.

**Now What?**

Now that you have been provided with this information and research, it is your
responsibility to be aware of the importance of being culturally sensitive to disability.
When welcoming students into your classroom, please be aware of the **diverse learners**
that you may have in your class. Use this information to create an environment that
encompasses all students. Be sure to develop relationships with parents/guardians. The
information they have on their child will be extremely helpful as you develop your
classroom environment. This can be accomplished by having open communication with
parents. According to Ceil Belasco, sending home personal notes to parents, sharing
that you have noticed improvement is comforting. Asking parents about their child’s
recent doctor appointments and how their family is doing allows the parents to feel
supported. When talking with parents it is helpful to talk about things **other than their
child’s disability** (Ceil Belasco, personal communication, July 15, 2009).

Treat parents of children with disabilities with the same high regard as you would treat
a parent with a child who is typically developing. Moreover, Dr. Charlene Trovato
believes it is important to see each situation through the parent’s lens (Dr. Charlene
Trovato, personal communication, July 15, 2009). Try to imagine the situation facing the
parent and have patience. For example, if a child is unable to turn homework in on
time, understand that the parent does care, but that something may have happened that
evening that prevented the child from completing their homework (Ceil Belasco,
personal communication, July 15, 2009). Having an open mind and listening to parents
is beneficial. Parents can provide a teacher with much information on their child with a
disability.

If you are a teacher, you likely will have at least one student in your classroom with a
disability. It is your responsibility to help children with and without disabilities to feel
comfortable in their classroom. Belasco feels as though the teacher should not pity the
child because of their disability. She also suggests not making assumptions about the child simply because he/she has a disability. Get to know the child, their strengths and weaknesses. Belasco mentions the importance of teachers using sensitive and appropriate language. “A child is a child before they are a disability” (Ceil Belasco, personal communication, July 15, 2009). For example say, “John is a child in my class with a diagnosis of autism”, not, “The autistic kid in my class, John”. The language teachers use can have a positive effect on children.

Teachers should have strong communication with students with disabilities. According to Elizabeth Healy, an advocate for students with disabilities, a conversation with a child with special needs may take more time than it would with a child without special needs. This may be due to different communication devices, etc. (Elizabeth Healy, personal communication, July 15, 2009). Although this communication may take longer, it remains the teacher’s responsibility to develop a relationship with the child. Have patience with the child and realize the importance of the relationship. Healy states that students with disabilities are often bullied or depressed while at school (Elizabeth Healy, personal communication, July 15, 2009). It is the teacher’s responsibility to develop a relationship with a child so that he/she feels comfortable sharing any concerns he/she may be experiencing while at school.

Following the next case study are resources to help you gain a better perspective of children with disabilities, siblings of children with disabilities, parents of children with disabilities, teachers of students with disabilities and any laws that pertain to a child with a disability. These sources also provide information that will help you understand the importance of being culturally sensitive to disability.

Case Study: Mrs. Connor

Mrs. Riley teaches third grade at Peabody Elementary School in McLean, Virginia. She has taught at Peabody for fourteen years. She has high expectations for her students: she expects each student to be on grade level for each curricular area. When a child does not seem to be on target, she is quick to discuss the issue with the child’s family. Her theory is that open communication between parents and the teacher is the best way to help a child succeed. Mrs. Riley feels she has a strong relationship with most of her student’s families, and she prides herself on these open relationships.
Samantha Connor is a new student at Peabody Elementary School. Over the summer, she and her family moved from Alabama to Virginia. For work, her father travels five days out of the week. Samantha, her mother, and her father live in an apartment about ten minutes from the elementary school. Each day Samantha takes the bus to and from school. Her mother does not like to drive in the city and finds driving around Washington intimidating. This makes it difficult for Samantha to have play dates with her friends and to participate in any activities outside of school. This also makes it difficult for Mrs. Riley to develop a relationship with Samantha’s mother.

Samantha’s overall school experience is enjoyable. She loves playing with her friends and thoroughly enjoys math and science. In mid-October, Samantha started to show signs of struggling in reading and writing. Mrs. Riley immediately sent a letter home with Samantha for her mother. The letter suggested a conference to discuss Samantha’s difficulties in reading and writing. Mrs. Riley usually schedules appointments in the morning or afternoon, which is convenient for parents who are dropping off or picking up their children. However, since Mrs. Connor does not drive Samantha to school, Mrs. Riley must rely on Samantha to take the letter home. Mrs. Riley had requested that Mrs. Connor sign the form with the appropriate time that she and her husband (if possible) would like to meet. For three days, Mrs. Riley asked Samantha if she gave her mother the note and if she had anything to return to Mrs. Riley.

Each time Samantha said, “Yes, I gave my mother the note, and no, I do not have any notes for you from my mother.”

This made Mrs. Riley furious. She thought to herself, “This mother knows that her daughter is having difficulties with reading and writing because I sent her a note informing her, but she refuses to meet with me. She clearly does not care about her daughter’s academic progress.”

Mrs. Riley then sent a second note home for Samantha’s mother. The second note said, “Dear Mrs. Connor, I am sure you received my first note regarding your daughter’s progress in reading and writing. We need to have a conference regarding Samantha’s struggles. In order to help Samantha succeed we have to work as a team, so I would greatly appreciate it if you would return this note with a time and date that works well for you (and your husband).”

Mrs. Riley gave the note to Samantha and asked her to give it to her mother.
When Samantha got home from school that day she handed her mother the note and said, “This is from Mrs. Riley and you HAVE to read it, sign it and I have to take it back to her. I’m sick of her bugging me all the time about it.”

Samantha went outside to play and when she returned, she found her mother sitting at the kitchen table, looking at the note in tears. Samantha said, “Mommy, what is wrong? What did I do? What is the problem? Why are you crying?”

Her mother quickly wiped her tears and told Samantha to wash up for dinner.

When Samantha went to school the next day, Mrs. Riley asked her if she had anything to give her.

Samantha said, “No I don’t, but that note made my mommy cry. I saw her crying at the kitchen table.”

Mrs. Riley was even more frustrated. She was annoyed that Mrs. Connor had become so upset over the information on her daughter’s progress before she had even spoken with Mrs. Riley. Mrs. Riley knew she had a challenge on her hands and she was not looking forward to it.

She thought to herself, “These kinds of parents are so overprotective that they cannot handle hearing that their child is struggling. All I want to do is discuss Samantha’s progress in reading and writing.”

After waiting for five days with no reply from Mrs. Connor, Mrs. Riley decided to call Samantha’s house. She left a voicemail for both parents.

She said, “Hello, this is Mrs. Riley, Samantha’s teacher. I have sent home two notes requesting a conference with you to discuss Samantha’s progress in school. I would greatly appreciate it if you would return my phone call at (543)578-5615. Please let me know what time and date works best for you both. I hope to hear from you by Monday.”

When Mr. Connor returned home from business, he found his wife sitting by the answering machine. He asked her what was wrong and she said, “I tried to write down the phone number for Samantha’s teacher but I kept messing up the numbers. I tried to call her back but I guess I wrote the number down wrong.”

Mr. Connor comforted her and said, “Honey please don’t worry, I will find the phone number. I will return Mrs. Riley’s phone call as soon as possible.”

Mrs. Connor was grateful to her husband for being so helpful and understanding. He returned Mrs. Riley’s call and scheduled a conference for the following Friday at 3:30pm.
When the Connors arrived for their conference with Mrs. Riley, they could sense the frustration in her voice. She seemed annoyed and agitated. The three of them sat down to discuss Samantha’s progress in reading and writing.

Mrs. Riley said, “Samantha is having a difficult time in reading and writing. I have tried to work with her but she does not seem to be progressing. I am concerned that she is falling behind the rest of her class.”

While Mrs. Riley was speaking, Samantha’s mother did not seem to focus. She looked all around the class, bouncing her knees up and down, tapping her fingers on the table and constantly clearing her throat, as if she were preparing to say something. Mrs. Riley grew more frustrated.

She continued, “We need to help Samantha as soon as possible. We need to create goals for her so she can improve. I think some tutoring sessions after school would be beneficial, and if she could come to school early a few days out of the week, I can help her myself.”

As Mrs. Riley spoke, Samantha’s mother stood up, went to the window and drew the blinds. She then straightened up the tissue box and chalk.

Mr. Connor was about to speak, and offer to work as a team to help Samantha. He was considering how to explain that it was too difficult for Mrs. Connor to bring Samantha to school early and to pick her up late because the driving gives her anxiety. But he was interrupted by Mrs. Riley, who abruptly stood up.

“Okay, clearly this is not important to you, Mrs. Connor. I have tried to share with you that your daughter is struggling but you are not interested. You are wasting my time, and clearly, I am wasting yours. I will speak with the principal and we can all schedule a conference together. Maybe he will have a little more influence on you,” she said.

Mrs. Connor ran out of the room crying. Her husband ran after her. After a few minutes, he returned to the classroom and asked Mrs. Riley to sit down.

He said, “Mrs. Riley, I am not sure if you know this or not. My wife suffers from two disabilities. She has dyslexia, and obsessive-compulsive disorder. Her dyslexia makes it difficult for her to read your notes, write numbers, read numbers and write letters. The OCD makes her feel as though she has routines and rituals that she needs to partake in throughout the day. She is amazing and has many of them under control, but when she feels uncomfortable, they tend to escalate. I really do not appreciate the way you spoke to my wife. We are leaving now because she is upset. I do agree, a
meeting with the principal would be appropriate. One day, I hope you learn to be more open and understanding of people and their disabilities.”

Discussion Questions:
1. What would you suggest that Mrs. Riley do now?
2. How do you think she feels?
3. How could she work with the parents to improve the relationship?
4. How can Mrs. Riley communicate with Mrs. Connor, especially now that she knows that reading and writing is a challenge?
5. What could have been done in this situation so that it did not escalate?
6. If this situation were to occur again, how could Mrs. Riley respond to Mrs. Connor differently?

Books for Professionals and Parents

*A practical handbook on disability sensitivity*，“synthesizes a pioneering body of work on disability sensitivity for the 21st Century, where technological, medical and legislative breakthroughs have changed the game for people with disabilities” (http://www.lulu.com/content/4608864).

A book that helps professionals plan a disability awareness day.

A book that is helpful for teachers who will be working with students with disabilities. This book provides different helpful teaching strategies.

This book fosters conversation and decision making on how to create an appropriate environment for children with disabilities.

In order to teach disability through children’s literature, this book provides the teacher with an “annotated bibliography, lesson plans, unit plans, activities and worksheets and additional resources”.

This book includes many different chapters that are helpful for teachers of children with autism. There is a chapter dedicated to “teaching and education”.

**Children’s Books**

This is a book about a boy named Russ. The book goes through a school day in Russ’ life.

A book about a boy named Russ who spends the day on duty at a fire station.

This book teaches each letter of the alphabet through the demonstration of a child with Down syndrome.

This book teaches the concept of numbers through the demonstration of a child with Down syndrome.

This is a book about a mother with a physical disability and her experiences with her child.

This is a book about two little girls with disabilities. The two girls became extremely good friends.

This book emphasizes the importance of teaching children that all children are different, with or without disabilities. Every child has different strengths and weaknesses.

This book teaches children the differences of children and the importance of friendship, regardless of a child’s disability.

This is a book about children accepting each other’s differences and working together as friends.

**Books for Children Whose Siblings Have Disabilities**

This is a book for a child with a sibling who has a disability. The siblings go on a walk with their brother Ian. Throughout the walk Ian (a child with autism) has different experiences related to his disability.

This book is told through the eyes of a child who has a sibling with a disability. The child tries to teach her brother the different rules in life. The little girl searches to seek acceptance and understanding of her brother and his disability.

**Films**

This is a movie about a man who has obsessive compulsive disorder. The movie goes through his adult life, showing and sharing the challenges he faces.

Nelson, J. (Director). (2002). *I am Sam* [Motion Picture].

This is a movie about a father who has a disability. He spends much of his time fighting for the custody of his daughter.

Schachter, S. (Director). (2002). *Door to Door* [Motion Picture].
This movie is about a man who has cerebral palsy. He goes through his adult life showing and teaching others that a disability does not stop someone from being successful.

This is a movie about a young fish that has a physically disabled fin. Watch this movie and experience the big adventure of Nemo.

This is a PDF file that shares numerous movies that involve people with disabilities.
Chapter Seven: The Voices of the Silent

Case Study: Tommy Miller

Tommy Miller, a seven-year-old living in a suburb of a large city, is the only child of two middle class parents. His family moved to a new town at the end of June from the nearby city. His parents wanted him to grow up in a safer environment, so they are now commuting to work in the city. Although they are not far from the city, the Miller family’s new town is less diverse than the city. For the most part, the town is racially, ethnically, and economically homogeneous.

Instead of hiring a babysitter, Tommy’s parents signed him up for a local day camp to make friends. Several of his new friends are in his new second grade class with Mrs. Shafer. Mrs. Shafer, a teacher for ten years, sent her students a welcome letter several weeks before school began. She instructed the students to bring in something for show-and-tell on the first day of school. Mrs. Shafer suggested the item be something from the child’s summer activities. After searching through his toy chest, he turned to his most prized possessions the night before his first day of school.

“How about your T-Rex tooth from the museum?” Angela, Tommy’s mother, called to him from the hallway.

“No, I want something no one else will have! Chris has one of those!” Tommy exclaimed, naming his new best friend who lives only two houses away.

Tommy continued looking, but by the time his parents called him to take a bath and get ready for bed, he had almost given up. He went to bed worried, unsure if he would be able to find something great enough to win over the class. Something no one in the class would have would surely do the trick! Just when he was about to fall asleep, he knew what he could bring in. He smiled to himself and fell asleep, knowing the beginning of his summer had surely been different from all the other kids.

The next morning, his parents searched for the car keys to take him to school before they went to work. Tommy snuck into the living room and slid his family photo album into his backpack. He knew that his parents would be upset with him if he took it, because it was so important to them.

“Tommy! Are you ready to go?” Angela called to him from the front door.

“Yeah!” he yelled, grinning wildly as he ran to the front door.

By the time school started and he was sitting in his seat in a noisy classroom, Tommy could barely sit still. He could not wait for show-and-tell! His teacher was very
nice and she smiled at him a lot. She helped the children take turns reading a book. If kids were stuck on words, she did not get upset or mad or yell. This was a refreshing change from his old school, where the classes were overcrowded and the teachers were too busy yelling at kids to help Tommy with course material. He was very excited to go to this new school where there were fewer students in the class. Also, Mrs. Shafer never yelled, even when another child knocked over a can of paint during arts and crafts.

As the day continued, Tommy almost forgot about show-and-tell. During lunch he sat with his new best friend Chris, and Chris’ friends Dylan and Matt. At recess, the boys played kickball and the girls played on the playground. All of the boys cheered for Tommy when he kicked the ball so hard, his team scored three points! Chris, Dylan, and Matt picked Tommy up and cheered.

“You are the best kicker in our grade! Are you good at baseball? You know we play afterschool sometimes,” Chris said to Tommy, as the whistled blew to signal the end of recess.

“Thanks! I never got to play baseball at my old school. But I watch it on TV!” Tommy said excitedly.

“You should play with us. We’ll teach you how,” Matt said. “Come to my house after school, I live next to Chris."

“Okay!” Tommy said, grinning. He could not believe his luck. The best show-and-tell ever and new friends all in one day!

As the class went inside, Mrs. Shafer continued with the activities she had planned for the day. They did some math, learned a few facts about the state they lived in, and they even watched a movie about the kinds of animals their local zoo had.

When the movie was over, Mrs. Shafer moved the class to the carpeted area in the back of the classroom. Tommy fidgeted in excitement as his classmates each stood up and showed their item to the class. Each child told stories about his or her trip to the beach or a ride on the fastest roller coaster at the nearby amusement park.

Finally, Mrs. Shafer called Tommy’s name from her list of students and he eagerly stood up. Holding the family photo album tight to his chest, Tommy stood in front of the class. He felt butterflies in his stomach as he looked at the sea of faces.

“Hello, Tommy,” Mrs. Shafer said with a smile. “What did you bring to show us today?”

“My family photo album!” Tommy said.
“That’s a great way for us to get to know your family, Tommy! What a great idea!” Mrs. Shafer replied.

Tommy beamed, knowing how exciting his summer was, and how excited he was to show everyone how much fun he had with his parents. Mrs. Shafer urged the children to move closer so they could see the pictures.

“Why don’t you pick four pictures and tell us what they are from?” Mrs. Shafer said.

“This first one is when my mom and Angela got ready for the wedding,” Tommy said, showing a picture of his two parents standing in white wedding dresses. Before moving to the suburbs, Tommy’s parents had been married for the first time following the state’s new legislation allowing for same-sex marriages. Although he has always had two mothers, Tommy’s parents could not legally be married in their state until recently. With the new laws passing in several states, many same-sex couples are able to get married. Also, it is now becoming a greater possibility that same-sex couples can have children and adopt together.

“And whose wedding is this, Tommy?” Mrs. Shafer asked.

“My mom and Angela’s,” Tommy said.

Tommy looked out at the kids in front of him and saw some look confused, some whisper to each other, and others giggle. When his eyes fell on Chris, Matt, and Dylan, all three were giggling with their hands covering their mouths. Tommy just shrugged and continued on to the next picture.

“This next one is my mom walking down with her daddy,” Tommy said, turning to another page in the album.

“That is very nice,” Mrs. Shafer said.

Tommy’s smile faded as the kids continued to snicker and point.

Tommy’s heart started beating fast and he began to sweat, realizing the kids were laughing at him. Wanting to show the kids how much fun he was, he continued with the pictures. He turned the album to a picture of him with his parents, all three faces covered in cake.

“And at the end of the party, we got to have cake and we had a food fight!” Tommy said, laughing.

When he looked at the kids, some of them looked unsure. Others looked bored. But his three new friends, his best friends in the new town, were laughing and pointing at the pictures.
“Ew, that’s gross!” Matt yelled.
“That’s enough, boys,” Mrs. Shafer said, but the boys continued to laugh.
“You aren’t supposed to have two moms, Tommy,” Dylan said.
“Alright, everyone back to your seats,” Mrs. Shafer said, louder this time. She stood up and thanked Tommy for his presentation, giving him a smile.
The rest of the class hurried to their seats while Tommy went to his cubby and put his photo album back into his backpack. As he went to take his seat while Mrs. Shafer looked in her desk for papers to hand out, Chris got up from his seat and walked over to Tommy.
“My daddy says, if you have two moms, then you won’t be normal,” Chris said, loud enough for the whole class to hear. Some kids laughed and some looked away from Tommy. Mrs. Shafer had found her papers and walked closer to the class just in time to hear Chris’ comment to Tommy. She knows that Chris’ teasing could easily escalate into persistent bullying—bullying that would continue after school on the bus with Tommy and Chris being neighbors. Since it was the first day of school, she did not want to get off on the wrong foot with her students. It could lead to yearlong problems for a new student like Tommy, who had not adjusted to his new surroundings. Yet, she was unsure what to do since she has never encountered this type of situation. Tommy’s parents are the first same-sex couple to live in this town with a child attending school. Mrs. Shafer finished her teaching degree ten years ago. At that time, her school did not offer classes on diversity. Although teaching requires her to take additional classes throughout her career, she has not thought to take a class on cultural diversity.

Discussion Questions:

1. Whom can Mrs. Shafer talk to for help with bullying and teasing? Should she involve Tommy’s parents, or the parents of the children doing the bullying and teasing?
2. Would it help to educate the children on what being ‘gay’ means?
3. How might outside resources be helpful to Mrs. Shafer? Where could she find these resources? Should classes on culture in education include issues such as sexual orientation and same-sex marriage?
4. Would a “zero tolerance on bullying” policy reduce the teasing and help Tommy adjust?
5. Should teachers be required to take classes on diversity, even if their school
district is not statistically diverse?

What?
The American Heritage Dictionaries (2006) defines sexual orientation as “the direction
of one’s sexual interest toward members of the same, opposite, or both sexes”. Several
terms are associated with sexual orientation, including the terms heterosexual,
homosexual, gay, lesbian, transgender, and bisexual. The glossary at the end of the
guide defines these terms, as well as many others. Although these terms are common in
today’s society, there are terms used within the sexual minority community, such as the
term ‘coming out’, as well as homophobia and heterosexism. LGBT is an acronym
used within the literature and the sexual minority community to refer to Lesbian, Gay,
Bisexual, and Transgender individuals. There are variations on this acronym to include
LGBTQ (Queer or Questioning) or LGBTIQA (Intersex and Asexual).

Homosexuality is in fact a part of our lives. Whether you hear stories on the news or
know someone who identifies as a sexual minority individual, they are a part of our
communities and schools. Ginsberg estimates that six percent of adolescents identify as
gay or lesbian, and Marinobles suggests this number is closer to ten percent of
adolescents (as cited in Campos, 2005). The United States Census, as far back as the 2000
survey, indicates that in terms of couples living together who are unmarried, one out of
nine is a same-sex couple (American Psychological Association, 2008). In addition, a
third of female same-sex couples and almost a quarter of male same-sex couples had
children under the age of 18 living in their house in 2000 (American Psychological
Association, 2008).

So What?
The topic of sexual orientation is important to schools and teachers for several reasons.
The most important reason is the safety of students. In a large study, the Gay, Lesbian,
and Straight Education Network (GLSEN) conducted a study to survey sexual minority
youth. In terms of harassment, 86.2% of students who identify as a sexual minority
youth experienced verbal harassment, almost a quarter of a sample of students
experienced physical assault, and over half were victims of what is known as ‘cyber
bullying’ in the past year (Kosciw, Diaz, & Greytak, 2008). The National Crime
Prevention Council defines cyber bullying as a recent phenomenon that “happens when teens use the Internet, cell phones, or other devices to send or post text or images intended to hurt or embarrass another person” (National Crime Prevention Council, 2009).

Students who experience harassment do so because he or she identifies as gay, or he or she has parents who are gay, in the case of the student in this case study. Perceiving or judging someone as gay based solely on looks, dress, or gender expression also leads to harassment (Lee Marcuzzi, personal communication, June 24, 2009). Overall, two thirds of the sample in GLSEN’s study felt unsafe in school due to a personal characteristic, such as sexual orientation or race (Kosciw, Diaz, & Greytak, 2008). Students also either did not report harassment because they felt staff would not be effective in helping the situation, or when they did, most often the teacher or school did not do anything.

**Now What?**

First of all, it is important to note that the sense of feeling different that emerges from individuals who are lesbian, gay, or questioning their sexuality is not exclusive to the onset of puberty. As reported by Treadway and Yoakum, it can emerge at the young age of five, or in the teenage years as Morrow notes (as cited in McCaughtry, Dillon, Jones, & Smigell, 2005). Teachers and staff of all grade levels should be aware of the victimization that can occur with any age group.

Lamme and Lamme (2001/2002) have offered a variety of suggestions on how to make gay families and their children feel safe and comfortable in schools. First, they suggest school personnel do not tolerate harassment, including derogatory terms. Also, provide diversity training not just for school personnel, but also for students. Another suggestion is to celebrate gay pride week, and to include noteworthy or famous individuals in class. In addition, it is important to make sure library and media resources include books and other materials on diverse families, sexual orientation, gender identity, and even fiction that includes characters that may identify as gay, lesbian, bisexual, or transgender.

In addition, Lamme and Lamme suggest many ideas for teachers. Sending home two copies of papers, handouts, or other items in case a family is divorced is beneficial not
Only to gay families who were previously part of heterosexual families, but also for any
divorced family. It can also be hurtful to ask who the ‘real’ parent is, suggesting the
biological parent is more important, if one exists in the family situation.

There are also many ways to bring up the topic of homosexuality in a classroom so that
teachers may educate students. In a class of fourth and fifth grade students, the teacher
brought up the topic of homosexuality following a theme of survival in middle school
the next year (Schall & Kauffman, 2003). The students and teacher discussed that a
classroom built on choices, trust, and the chance to voice one’s own opinion would help
create class environments where children can learn safely. She then read aloud a book
about two princes falling in love and allowed the students to voice their opinions and
initial reactions. Then they had the choice to read additional books with the subject of
same-sex parenthood or partnership, and again discussed those books. The most
important point the authors make is that the children knew that treating others with
respect is important, however when they encounter situations that they do not
understand, they respond negatively. The students expressed “that if they were told
what was going on and were helped to understand others, they would be more tolerant
of each other” (Schall & Kauffman, 2003, p. 41).

Schall and Kauffman also found that the students wondered why they had no
knowledge of the reality of a person being homosexual. Their knowledge of
homosexuality came mostly from friends and close in age family members, but
did not come from adults. The students also questioned why adults feel children cannot
handle information about homosexuality. After several months had passed, the
students still discuss the books they read, and they have stopped using derogatory
terms on the playground to insult others. They even mentioned standing up for others
and for themselves. This type of discussion with the students as well as reading of
children’s books with same-sex partners and parents is a great way to start to educate
students about homosexuality and to decrease harassment and bullying by students.
Children’s books, literature, and films are all a way to begin a dialogue in classrooms
about homosexuality.

Case Study: Mr. Smith
Mr. Smith has just started his first year teaching fourth grade in a suburban school district. He is both nervous and excited, but as the first few days of school pass, his nervousness begins to decrease. He enjoys his class and is looking forward to Parents Night on Thursday night, where he can meet the parents of his wonderful students. When setting up his classroom for the school year, he solicited help from friends who are teachers, and his colleagues in the school. In an effort to include diversity, he includes pictures and posters with people of different races, ethnicities, and cultures. Found throughout the classroom are maps of countries and continents, as well as books and activities on different countries and cultures.

On the night of Parents Night, Mr. Smith waits patiently and nervously in his classroom for parents to begin arriving. He is unsure about how to approach parents. Should he be friendly and open or business like and professional? What if a parent has a question that is unsure about or cannot answer? He nervously arranges and rearranges the snack table as he waits. He realizes that the parents may be as nervous as he is, since this is a new school building for these students with new teachers and principals.

Finally, he sees his first set of parents walk into the classroom. They smile brightly at him and as they come over to shake his hand, he relaxes. For the next fifteen minutes, he greets parents until it is time for the curriculum discussion he has planned.

“Good evening, Moms and Dads and welcome to 4S! I am Mr. Smith and I will be teaching your children this year,” Mr. Smith says to the parents seated in front of him.

The adults politely applaud, and Mr. Smith tells the class a little bit about himself.

“Since this is my first year teaching, I welcome any questions, comments, or suggestions that you may have,” Mr. Smith concludes, as a few more parents arrive late.

“I see here that you will be working on long division and multiplication this year. My daughter has a lot of trouble with math. Are there any resources in the school to help her if she needs it?” a parent asks from the back of the room.

Relieved, Mr. Smith knows the answer to this question. He tells the parents about peer-to-peer tutoring programs and that he is available after school or at special times during the day if a student needs extra help.

“Will you be discussing history of the state?” another parent asks.

“Yes, we will. I will also teach about the three branches of the government, and about voting,” Mr. Smith answered.
“What about families and different relationships?” a mother asked from near the
door.

Mr. Smith saw several other parents nod their heads in agreement.

“Definitely,” Mr. Smith answered. “I have several books in mind to have the
class read and talk about, such as stories about single parents or grandparents who raise
their grandchildren. It should be a very enlightening topic.”

Several parents nodded their heads in agreement. As the questions continued,
Mr. Smith felt more and more at ease. He felt the parents had great questions and were
all very interested and proactive in their child’s lives in school. Furthermore, he had an
answer for every question. As the question and discussion portion of the night
concluded, Mr. Smith suggested parents get to know each other for the remaining time
and that he would be mingling and meeting parents individually.

An elderly couple was the first couple to come up to Mr. Smith as the group
moved towards the snack table or formed smaller groups.

“Mr. Smith, it is so nice to meet you. I’m Anna and this is my husband, Reggie,”
the woman said, shaking his hand. “Our granddaughter, Amy, is in your class. She just
loves you!”

“Oh yes, Amy! She is wonderful, very bright. A natural leader! She likes to settle
disputes. I can see her being a judge someday,” Mr. Smith replied with a smile.

“We see that too. We are really glad you will be discussing government,” Reggie
added. “She is very eager to learn about how the laws work.”

Mr. Smith spoke with Amy’s grandparents for a few more minutes, then moved
on to another couple.

“Hi, we’re Ben’s parents,” the father said, pumping Mr. Smith’s fist exuberantly.

“Ah, yes. We’ve spoke on the phone,” Mr. Smith said.

Mr. Smith thought to himself, these are the parents who called four times this
summer and sent lists of suggestions about their child. He knew that parents could
sometimes be very involved in their child’s life, and he was glad to have them. They
spoke for a few minutes about Ben’s learning style and where he might need additional
help.

Somewhat relieved, his parents moved off to another group of parents near the
snack table. Mr. Smith had a minute to jot down a note or two about Ben before another
parent came up to him.
“Mr. Smith? I’m Tina Watson,” the woman said, shaking his hand with a bright smile, her bracelets jingling.

“Oh! Louise’s mother, she is so wonderful!” Mr. Smith said. He truly did like Louise was a quiet child who spoke rarely in class, but when her comments were uncommonly profound. However, Louise was a bit of a loner. She did not have many friends and did not seem to participate in her classmates’ discussions on sleepovers for the weekend, or neighborhood pick-up baseball games after school. Some kids ignored Louise, but others liked her. He had not been able to figure out why, but hoped Louise’s mother might have an answer.

“Louise talks about you all the time in class,” Tina said.

This surprised Mr. Smith. If she was talking a lot at home, why did she keep to herself the majority of the time at school?

“Really? She seems to be pretty quiet in school. Is she usually shy for the first couple of weeks of school?” Mr. Smith asked.

“Actually, yes. That is why I wanted to talk to you about your section on family and relationships,” Tina said, tapping the curriculum guide in her hand that he had provided for the parents.

“I am looking forward to that section,” Mr. Smith said. “I just met Amy’s grandparents, they are great. Are Louise’s grandparents at home as well?”

“No, she does not have a relationship with his grandparents right now. I was wondering what you had planned to include in the curriculum about same-sex relationships. Or same-sex parents?” Tina asked.

Mr. Smith thought for a minute, and looked around at a room filled with heterosexual couples.

“Well, I am not sure that topic would be relevant to this classroom,” Mr. Smith finally said, as he saw another parent enter the classroom.

“Oh, Mary, over here,” Tina said to the woman who had come into the classroom, looking rushed. “Mr. Smith, I’d like you to meet my partner, Mary.”

Discussion Questions:

1. Does Mr. Smith owe Tina and Mary an apology?
2. Why would Mr. Smith believe that gay and lesbian issues are not relevant to his classroom?
3. How should Mr. Smith incorporate gay and lesbian issues into his curriculum and classroom?
4. How might he handle parents who do not want these topics discussed in the classroom?
5. Can a teacher with different views on homosexuality issues set aside his or her feelings to teach about the topic? If so, how?
6. How can Mr. Smith help Harry to form relationships with the other children, especially keeping in mind that bullying and teasing most likely occurs for Harry because of his family?

What?
Same-sex parenting, as evidenced by the statistics following the first case study, is much more prevalent now than it was even a generation or two ago. However, many teachers and school personnel still assume that everyone in their classroom and parents of students are heterosexual (Straut & Sapon-Shevin, 2002).

In such a diverse country, there are several obstacles to including LGBT issues in preparing teachers to provide safe schools and classrooms for students with every type of sexual identity (Straut & Sapon-Shevin, 2002). The first of these obstacles is assumptions, which teachers and students alike make about their pupils and classmates sexuality. Most often, they assume that their peers and students are not gay or lesbian. The second barrier is the **hegemonic norm**, which is the belief that everyone is heterosexual and everyone came from heterosexual families. Third, some individuals may perceive the discussion of LGBT issues as promoting homosexuality and are against doing so. Finally, LGBT issues are not included in curriculum, which leads to a curriculum gap.

So What?
Why is it important to avoid assuming everyone is heterosexual? There are several answers to this question. The hegemonic norm leads to educators not choosing readings by authors who are gay or lesbian, or even not choosing guest speakers who are gay or lesbian. Most importantly, most students and educators of teachers are not even aware of the lack of LGBT issues in curriculum (Straut & Sapon-Shevin, 2002).
Students and educators most often do not even think to consider LGBT issues, unless of

course that student or teacher identifies as LGBT. However, it is important to include

these issues because it helps to educate students on a topic they may not know a lot

about. Knowledge helps to break down stereotypes of groups of individuals. Silence

about the issue of homosexuality is similar to silence about racist, sexist, or classist

stereotypes, comments, or remarks (Hermann-Wilmarth, 2007). The silence allows

individuals to consider those stereotypes as correct and true of that individual or group.

Most school staff, teachers, parents, and students would agree that classrooms that feel

warm and welcoming, do not discriminate, and allow for differences and education

about those differences, contribute more to learning. As mentioned earlier, a classroom

built on choices, trust, and the chance to voice one’s own opinion helps to create

classroom environments where children can learn safely (Schall & Kauffman, 2003).

Consciously or unconsciously leaving out the history, role models, and issues of a

minority group sends the message to students that this group is not important enough

to discuss in school.

Now What?

In response to the barriers mentioned earlier, Straut and Sapon-Shevin (2002) give

several suggestions to educators, especially pre-service teachers. First, teachers need to

have knowledge of terminology, such as ‘gay’ and ‘transgender’. Demographic

information about LGBT students and parents is important, as well as is information to

combat stereotypes. Second, teachers need courage to take action about discriminatory

acts that they witness that are homophobic. A tip for teachers when reporting

harassment (of any kind, not just harassment based on sexual orientation) is to write

down clearly what happened, the teachers and other individuals present, explain what

each person did, and make sure this information is given to school personnel and

possibly the parents (Lee Marcuzzi, personal communication, June 24, 2009). Finally, a

teacher needs skills to help his or her students rectify assumptions and to begin a

dialogue about issues that students may not personally experience.

Straut and Sapon-Shevin (2002) give several suggestions for each content area in school.

In math and science classes, the authors suggest challenging gender stereotypes such as

a story problem dealing with two male students baking for a bake sale instead of two
female students. Or using statistics such as hate crime rates, the rate of calling on males
versus females, or which gender makes more money. English classes provide more
opportunities to discuss sexual orientation. Many books can spark discussions about the
differences within families, relationships, and interactions. In the visual and performing
arts, the sexual preference of the artist can be relevant for discussion. The use of music
to teach about and against homophobia is also useful. Finally, social studies provides
many opportunities to bring up the topic of homosexuality. For instance, the Stonewall
Inn riots that occurred in New York City in 1969 are a part of the gay rights movement.
Gay individuals were also included in the Holocaust as a hated group. Straut and
Sapon-Shevin suggest a goal of social studies education is to create decent citizens who
live in a democracy where there are multiple and diverse perspectives.

There are also non-curriculum suggestions that teachers should be aware of. Lamme
and Lamme (2001/2002), in addition to the suggestions following the first case study,
advise that teachers realize that the family may be ‘closeted’, so the parents have not
disclosed their sexual orientation to others. The risks of disclosure can be harmful to the
family and to the child. Along these lines, teachers should not ask a student to discuss
his or her family in the classroom to avoid the disclosure issue. However, if they are
older children or the parents agree to discussions, then it may be beneficial to discuss
the student’s home life. Finally, the school should be sure to include parents in
volunteer activities or ask them to speak to classes if they are willing.

Case Study: Katelyn Jones

Park View Middle School is a moderately sized middle school in a suburban
area. As an eighth grader, Katelyn Jones has lived in this town her entire life, and
knows all of her classmates. The town is slightly more diverse because it is close to a
large city. It also does a foreign exchange student program with students from countries
all over the world. Katelyn feels blessed to know so many different types of people.

A week ago, Katelyn’s best friend, Linda, revealed that she thinks she may be
attracted to other women and not men. Linda is afraid that if anyone else finds out,
other students will treat her differently or tease her. Although Katelyn and Linda and
their friends are a generally open minded group, they know that some teachers,
parents, administrators, and other students do not know a lot about what it means to be
gay, lesbian, bisexual, or transgendered.
After school one Friday, Katelyn and Linda are meeting their friend Harry at the local pizza parlor. Harry, also an eighth grader at Park View Middle School, is a child of same-sex parents. His father Thomas raised him from birth when his birth mother, Thomas’ sister, died. Thomas adopted Harry as his son and several years later, met his partner Bill. Together they have lived as a family and raised Harry.

The three friends find a quiet booth in the back of the pizza parlor where they talk about homework, tests, teachers, and the class gossip as they wait for their pizza. As soon as their food arrives and the server leaves, Linda decides to tell Harry about her confused feelings of attraction. Harry and Katelyn are both sympathetic as they listen to Linda’s dilemma about whether or not to tell her parents. She has heard horror stories about parents kicking their children them out of their homes for being gay or lesbian.

“What can we do? I feel like we are hiding out back here,” Katelyn finally said, glancing around the pizza parlor where they had secluded themselves from other patrons.

“You know, my cousin’s school in the city formed a club. It’s called a Gay-Straight Alliance. He said that anyone could join, and there are a lot of people that are in the club. They talk about being gay and how to teach people about what it means to be gay,” Harry said, almost thinking aloud.

“Really?” Linda said, a glimmer of hope in her eyes.

“Oh, yeah. He said he joined the GSA ‘cause of my dad’s,” Harry said, nodding fervently.

“Wow. So straight people can join?” Katelyn asked.

“Yup,” Harry answered. “Anyone can. And you can do it through the school. And it doesn’t mean you’re gay just because you’re in the club. I mean, that’s just not true. People are always asking me if I’m gay just because my dad’s are. Well, I’m sick of telling them no. Maybe if we had a club like this, we can show people, ‘hey it’s okay to be gay and it’s okay to have friends who are gay’.”

“Yeah, that is a good idea,” Katelyn said.

As several of their other friends came in to join them, the conversation quickly turned to the football game that night and who would win the rivalry. However, Katelyn could not keep her mind off of the idea of a Gay-Straight Alliance.

At the football game that night, Katelyn sat with Linda and Harry and their other friends, drinking hot cocoa in the early November chilled air. They cheered on their
team, groaning when the other team scored a touchdown, and going hoarse over the
impressive two-point conversion their team scored.

During halftime, Katelyn made her way to the bathrooms. As she left to head
back to the stands, she noticed her math teacher, Mrs. Morris, standing alone along the
fence. She had loved having Mrs. Morris last year as her math teacher. She always loved
hearing her exhilarating tales of backpacking through Europe in college, or living on a
boat one summer in the Pacific Ocean. Mrs. Morris always made herself available if any
student wanted to talk. About math or otherwise.

“Mrs. Morris, hi!” Katelyn said, coming over to stand next to her along the fence.
“Katelyn! It’s so good to see you! You know, I miss having you in class,” Mrs.
Morris said with a smile.

“I do too. Mr. Pierce wears the same tie every day,” she replied and they both
chuckled. “Actually, I have a question for you.”

“Okay. What is it?”

“Well,” Katelyn said, hesitated for a minute, and then pressed on. “Some friends
and I...well, we were talking about forming a club. It’s not an academic club though,
more of a social, informative type club.”

“Hmm. Well, those types of clubs are possible. There are some guidelines but I’m
sure we can set it up. I would be happy to be an advisor. What’s the nature of the club?”
Mrs. Morris asked, her expression turning thoughtful.

“Well, it would be a Gay-Straight Alliance,” Katelyn said, then added hurriedly,
“I mean, it only makes sense. So many schools have them, and there are people who are
gay, even people our age. If the math club can have a club to talk about math issues,
there should be a club for people who want to talk about gay issues, even if they are or
aren’t gay.”

“That’s very well said. Let’s do some research and we can present our idea to the
board of education. They are meeting next Thursday.”

“That sounds great. Thank you so much!” Katelyn said, already formulating a
plan in her mind.

The next Thursday, Katelyn and her friends and classmates who had heard about
her idea, came to the board of education meeting. They had met together after school
every day with Mrs. Morris and researched online about GSA’s and how to form them.
Katelyn stood nervously waiting for her turn to speak. After going through several
other issues and an hour of bureaucratic boilerplate, the board president finally called
her name. She approached the front of the room and began speaking. She told the board of education members about the need for the GSA. She gave them statistics on the number of schools who have a GSA. She also gave statistics on how students feel safer in a school with a GSA. Then she discussed how they could form the club, including nominating and voting for officers, holding fundraisers, and bringing awareness to other students and adults in the community. As she finished her speech and looked back at her classmates with a sigh of relief, they smiled at her, clapped, and cheered. Mrs. Morris nodded at her and smiled her approval.

“Miss Jones, your speech was very informative. However, this board feels there is no need for a Gay-Straight Alliance,” the board president said after conferring with the other board members for several minutes. “If you wish to have this kind of club, you must do so outside of school. Thank you for your time. This meeting is adjourned.”

Katelyn, in disbelief, stared at the board members as they gathered to leave along with the rest of the community members in the auditorium. Some of her classmates looked bewildered, some defeated, and still others looked angry. She saw a strange look on Linda’s face, which can only be described as fear, and thought to herself, now what?

Discussion Questions:

1. What do you think the benefits of a GSA are to a school? What, if any, are the disadvantages of such a club?
2. What else can Katelyn do to seek approval from the board of education?
3. Are there laws that can prohibit GSA clubs, or protect schools if they decline student’s wishes to start one?
4. How important is Mrs. Morris’ role in forming a GSA, besides the fact that they need an advisor? What about schools that do not have a teacher willing to be an advisor to this type of club?
5. Are GSA’s a benefit to the school community and the outside community? Why or why not?

What?

A Gay-Straight Alliance or GSA, is a club run by students within schools. It “provides a safe place for students to meet, support each other, talk about issues related to sexual orientation, and work to end homophobia” (GSA Network, 2008). GSAs are important support groups for students, both gay and straight. They are a source of education for
the school community on LGBT issues. GSAs involve themselves in pride weeks or awareness events, as well as ‘teach the teachers’ days where they teach school staff about becoming allies for LGBT students (GSA Network, 2008). They also participate in the Day of Silence, a day where students stay silent in order to recognize how homophobia has led to silencing LGBT community members. Some GSAs take on an activist role, pushing for inclusion of LGBT issues in curriculum, LGBT books in libraries, and better written and implemented anti-discrimination policies.

So What?

Lawrence King. Carl Walker-Hoover. Jaheem Herrera. These are the names of three youth who died because of bullying and discrimination based on perceived homosexuality. Lawrence King, fifteen years old, experienced bullying by his classmates and another student, on February 12, 2008, they shot him twice, killing him because he openly identified himself as gay (Conoley, 2008). Carl Walker-Hoover and Jaheem Herrera both completed suicide in 2009 after repeated bullying and teasing that the two young adolescents were gay (Harpo Productions, 2009).

Other statistics suggest that students who identify as LGBT attempt suicide about two to three times more often than non-LGBT peers (Maryland School Mental Health Alliance, 2009). These students are also more prone to substance abuse, depression, loneliness, dropping out of school, and the aforementioned harassment and assault by peers (Maryland School Mental Health Alliance, 2009). In addition, homelessness due to bad reactions from parents to their child coming out as gay or lesbian, is a real reality for adolescents. Some estimate that anywhere from twenty to forty percent of homeless adolescents identify as LGBT (Ray, 2006).

In addition to the effects that harassment has on students mentioned in the first case study, victimization of students also leads to harmful effects on education. Students who reported being frequently physically harassed due to their sexual orientation, also admitted to having lower grades than a national sample of students did (Kosciw, Diaz, & Greytak). Issues of sexual orientation also affect plans for pursuing college or other advanced degrees. LGBT students, compared to a national student sample, were two times as likely not to pursue college. LGBT students experiencing verbal harassment also miss school and classes more frequently than their counterparts in the majority.
Students need a support system within schools, and they need teachers and staff who will stand up for them and become their allies. Szalacha (2003) studied schools in Massachusetts to determine the effect that GSAs have on the school climate. In schools with GSAs, students could better identify staff members who were supportive of LGBT students, there was a decrease in gay and lesbian slurs, an increase in positive, supportive comments about sexual minority youth from teachers, and the students reported differences in attitudes and also differences in their own and others behaviors.

Now What?
The GSA Network (2008) gives many guidelines on how to start a GSA. Although these guidelines are meant for students wanting to form a club, they are beneficial to teachers as well. The student handbook in your school includes the rules about how to establish a group or club. The rules may include: securing an administrator’s permission; deciding to take on a staff or faculty advisor; or, writing a constitution. The next step is to find an advisor, whether it is a teacher, librarian, counselor, or other school staff member, as long as they are a supportive ally of sexual orientation issues. Third, having an administrator on your side is important. Another important note is that if students or teachers would like to start a GSA, the Federal Equal Access Act protects forming such a club. Fourth, let guidance counselors know about the group as they may know other students who have an interest in such a club.

Fifth, pick a place to meet in school that will allow for privacy and confidentiality. Also, advertise about the club and think about your choice of words. Even posters in the hallway can educate students, whether those students attend a meeting or not. Once the club is formed, establish ground rules so that the discussions have a safe, respectful, and confidential aspect to them (GSA Network, 2008). Such rules can include prohibiting the use of assumptions or labels about another individual’s sexual orientation. Finally, prepare for the future of the club by setting goals and discussing fund raising. Lamme and Lamme (2001/2002) believe Gay-Straight Alliances should receive support from the school and its staff. They also suggest involving both gay and straight students in important activities such as school dances or prom.

Suggested Resources:
Children’s Books

Combs, B. (2000). *1, 2, 3: A family counting book*. Ridley Park, PA: Two Lives Publishing. This counting book is ideal for younger children, suggesting ages two to five. It counts items from one to twenty, while showing alternative as well as traditional types of families, including a male couple welcoming two children into their home. The pictures also depict different races and ethnicities.

de Haan, L., & Nijland, S. (2000). *King & king*. Berkeley, CA: Tricycle Press. A modern, diverse twist on classic prince-meets-princess fairytales, this children’s book tells the story of a prince whose mother, the queen, wants him to marry. He reluctantly agrees and begins meeting princesses from around the world. However, he does not like any of the princesses he meets. The last princess he meets arrives with her brother, and it is then that the prince finally falls in love at first sight. However, it is not with the princess, but with her brother. The two marry and become King and King of the kingdom. This book is an interesting addition to other, more popular fairytales such as Cinderella.

In this follow up to *King & king*, the married kings go on a honeymoon to the jungle. They travel through the jungle for many days, meeting many animal families. Throughout their travels, they have a feeling that someone is following them. Eventually, they must return home. However, when they do, they find something in their suitcase: a little girl! They adopt her into their family and they live happily together.

“This book is a sweet poem which shows families with mom and dad, two moms, and two dads. The large, colorful illustrations are great for group story time or for one child sitting on your lap. Suitable for reading to children from newborn to 7 years old. The book also includes coloring pages as well as space for children to write their own family stories. Gay-friendly preschool literature is a long overdue resource for parents and teachers, both gay and straight. The author wants children with gay parents to feel included in the world of children's literature, and also wants to help straight parents provide their children with books which promote an appreciation of diversity.”

This newborn to seven year old age appropriate book tells about one year old Emma’s life with her two mothers and her siblings. It rhymes and repeats the title of the book, ‘Mama eat ant, yuck!’ throughout the book, which tends to thrill young children.

Holly, the twelve year old daughter of lesbian mothers, moves to a new town with her family. She does not want her new friends and classmates to know about her family, so she lies, even about her name. Eventually, the lies catch up with her and she realizes it is much easier to tell the truth than to hide who her
family really is. This 132 page novel is a good read for older children, perhaps
grade four or higher.

Molly, the daughter of a lesbian couple, draws a picture of her family for her
class’ Open School Night. When one of her classmates says she cannot have two
mothers, she tells her mother about it later that night. Her parents tell her that
families can come in all shapes and sizes, and she remembers her classmate’s
comments that day. Some said they had only a mommy or a daddy, and some
had grandparents and dogs. Molly then believes it is true because her mothers’
love each other and that is what makes a family. Nancy Garden has written
many children’s books on the topic of families and same-sex parents.

This children’s book tells the story of Nate, who feels he must choose one best
color, one best friend, one best mom, etc. Through his interactions with his
various friends and his two mothers, he learns that he does not have to choose
one person, item, or color, as his favorite. He can like all things equally. An asset
to this book is that it includes the text in Spanish along with English. It also
provides vivid illustrations of people of different races, socio-economic status,
and family structures. At the end of the book, there is a short list of suggestions
for parents, caregivers, and teachers about preschool aged children and the need
to teach them that no one thing is the ‘best’ and that differences are a part of life.

Retrieved July 14, 2009, from
http://www.amazon.com/exec/obidos/ASIN/1555834280/understandi0d-20
This story is about a cat that lives in the city with a male couple. They take their
cat, Lucy, with them on weekend trips to the country. Lucy gets into some
trouble chasing after a dog she does not like. There are numerous references to
other same-sex families throughout the book.
Newman, L. (2000). *Heather has two mommies* (2nd Ed.). Los Angeles, CA: Alyson Wonderland. Retrieved July 14, 2009, from http://www.amazon.com/exec/obidos/ASIN/1555835430/understandi0d-20 This is the ten year anniversary edition of this book, originally published in 1989 and causing huge controversy. The first of its kind to describe different types of families, it was stolen from libraries and criticized by members of the United States Senate, among other events. It tells the story of Heather’s life with her two mothers. Heather learns that her friend’s in her classroom all have different types of families as well. It is appropriate for ages four to eight.

Newman, L. (2002). *Felicia's favorite story*. Ridley Park, PA: Two Lives Publishing. In this children’s book, Felicia asks her two mothers for a bedtime story. She wants to hear her favorite story about how she was adopted by her parents. Her mothers’ tell the story of wanting to have a baby to share their love with. In the bedtime story, they take an airplane ride to Guatemala to adopt Felicia when she was a baby. This children’s book is important not only because it discusses same-sex parenting, but also discusses adoption.

Newman, L. (2009). *Mommy, mama, and me*. Berkeley, CA: Tricycle Press. Meant for younger children, this short rhyming book describes a family with two mothers going through daily routines with their child. The family is portrayed as loving and just the same as other families with opposite sex parents. This is a great book for preschoolers or even kindergartners. The pictures of two mothers going through daily normal interactions with their child are an important lesson for children.

Newman, L. (2009). *Daddy, papa, and me*. Berkeley, CA: Tricycle Press. Following the same idea as *Mommy, Mama, and Me*, the interactions in this book are between two fathers. Their child is depicted interacting with them in daily activities. It includes non-stereotypical male gender activities, such as baking a pie, playing dress up, and learning to sew. It is ideal for toddlers, preschoolers, and kindergartners.

Todd Parr’s children’s book celebrates different types of families, including single parent families, same-sex parent families, families with adopted members, stepfamilies, and the nuclear family.

In this true story written for children, two male penguins at the Central Park Zoo in New York City become a couple. Like the male-female penguin couples, they do everything together, even build a nest home. The only thing they cannot do is have a penguin family. When another penguin couple produced two eggs, the penguin keeper gives one to Roy and Silo because the other couple could not care for both of the eggs. After taking wonderful care of the egg, their chick was born and they named him Tango and they all lived happily with the other penguins. The penguin family still resides in the Central Park Zoo. This book is an asset to showing children that families can be different, even animal families.

This story also discusses families and the different types of families there can be. It includes same-sex parent families, divorced families, grandparent-headed families, and even families without children who refer to their pets as their children. It intermingles and compares pictures of variations in animal families with differences in family structure in human families.

This four through eight year old children’s book involves the theme that everyone is the same, despite skin color and sexual orientation. Two boys talk about one boy’s dads, who are blue. They try to decide why they are blue, and
decide it is okay because they just are. Another child appears and says her two parents are green.

Older Children/Adolescent Books

This book is a short story collection. The authors are young adults going through LGBT issues.

This non-fiction novel is a memoir of a young woman dealing with her own sexual orientation as well as learning about that of her late father. The story is told in graphic novel form using comic strips.

This young adult novel is a story about two girls who meet while working at a fast food place. They begin to form a deeper relationship and fall in love. Unfortunately, they experience stress and resistance from friends, society, and family members. Since it is a young adult novel, it may be more suitable for older teens in terms of reading level.

A description of this book can be found in the earlier resource section with the first case study. Although it is suitable for younger children, around grade four, it may be a good read for teens.

This story, cited in Letts IV and Sears (1999), is about Colin, a young boy who has a brother who is dying. He is sent to live with relatives in London. While there, he writes a letter to the Queen and asks for the best doctor she knows to help his brother. When trying to meet the doctor, he is thrown out of the hospital and
meets a man outside the hospital. The man is visibly upset because his partner is
dying of AIDS. The two strike up a friendship. The contributor of this chapter
discusses using the book with a class.

**Professional Books**

This book gives a lot of information for teachers and other school staff. It
includes stereotypes of gay and lesbian people, as well as answers common
questions that students may ask their teachers. The chapter on Myths is an
excellent way for teachers to educate students on stereotypes that can be
harmful. Another chapter on famous gay and lesbian individuals includes a long
list of historical and contemporary people. The list can be surprising and also
informative to children and young adults. Gay and lesbian individuals, or
children of gay and lesbian parents need role models and historical and
contemporary figures can serve as such. A list of resources and websites can be
found in the same chapter as the gay and lesbian individuals in society.

In this chapter book full of essays and anecdotes, contributors provide
information on how to include gay and lesbian issues in elementary curriculum.
They provide tips about how to answer children’s questions (p. 44), name several
texts that can be used in the classroom, and provide stories and dilemmas
revolving around LGBT issues in the classroom.

& Bacon.

This book includes a chapter on music, titled “Using music to teach against
homophobia”. It gives four categories of songs: addressing gender roles and
behavior expectations, songs for adults about issues of sexual preference and
relationships, songs to spark discussions about LGBT issues in older children,
and children’s songs that children can sing about sexual orientation (as cited in Straut & Sapon-Shevin, 2002).

Films

In this controversial and award winning documentary, teachers are filmed in his or her classroom discussing gay issues with students. Students from first to eighth grade asked questions, discussed stereotypes, read books about same-sex parents, and met young adults like them who are gay or lesbian. The children in the video were more informed than many may believe. In fourth grade, children knew about cross-dressing and what it is. In third grade, students knew what the term ‘homophobia’ meant. Other students expressed the understanding that gay people are the same as anyone else and how biases and stereotypes can affect a person’s life. In a combined first and second grade class, children created a picture book detailing issues they had faced such as being teased or called ‘gay’. The students were also able to talk about issues such as gay marriage. Students as young as first grade demonstrated understanding of what it means to “put yourself in another person’s shoes.” A parent in the film suggested that bringing up gay issues “opens the dialogue so even if you are against the lifestyle, it still needs to be there, it still needs to be addressed”. The teachers used different techniques such as mapping and clustering with the words stereotype and gay and having class discussions by asking questions. Using role models and pictures of famous people and having students decide if they are gay or not, is an important way to teach that you cannot tell who is gay by how they dress or act. One teacher mentioned when hearing derogatory terms, that “you can’t just say stop, you have to educate about it, and if you don’t educate about it, it won’t stop”. It is suggested that if teachers do not step in when there is harassment or name calling, it sends the message that those behaviors are acceptable. During a class assembly, a movement teacher shows the children how hard it would be to play soccer and have to hide your leg. He equates this with the difficulty of hiding a part of yourself, particularly being gay, and the understanding by the students is incredible. This film is, and should be, a vital part of the curriculum
of future teachers. It gives future teachers a real life example of how to start a
dialogue or bring up gay issues in the classroom. Discussing different families
and lifestyles changed the beliefs of many of the students in the film and they
realized that people who identify as gay are just like anyone else.

http://groundspark.org/our-films-and-campaigns/thatfamily
This is a documentary on living in a different type of family than a nuclear
family. It includes same-sex parent headed families as well as divorced families,
single parents, families with parents of two different races, and families from two
different religious backgrounds. If ordered online from the Groundspark
website, it comes with a discussion and teaching guide and schools or other
community groups can receive training on how to use the video with young
children to teach about diversity.

This video documents the first legal marriage in San Francisco between two
women. It is nineteen minutes in length and can be used to spark discussion in
schools, or viewed in meetings of GSAs.

campaigns/stillelementary
This newly released DVD version of *It’s Elementary: Talking About Gay Issues In
Schools* includes the original 1995 documentary and can be found in the
Groundspark store (http://groundspark.org/store/home_users). It also includes a
37-minute educational training video as well as a guide for curriculum planning
and professional development in K-8th grade settings. In addition, it introduces
the new 51-minute documentary *It’s STILL Elementary*, in which the director
Debra Chasnoff revisits some of the footage from the original video, as well as
interviews with some of the students from the original video who are now young
adults. In a clip from the Groundspark website, Chloe Moushey, one of the
original children interviewed now as a young adult, commented that
“learning about gay and lesbian issues gave us vocabulary to talk about it, it gave us a forum to ask the questions that we wanted to ask. Our teachers were sensitive about the issue, but they were also very neutral. They would just give us the facts, they would answer our questions honestly and truthfully... I think that learning about these things that people don’t usually talk about has given me tools to ask questions about other issues. Education is never wrong. If you present the facts and you allow someone to think about it for themselves, I don’t think that there are very many downsides of that” (clip retrieved July 5, 2009, from http://groundspark.org/our-films-and-campaigns/stillelementary/ie2_clips).

This video discusses gender roles and stereotypes from the point of view of teens that identify as straight, gay, lesbian, bisexual, or questioning. They discuss anti-gay teasing, taking on non-stereotypical gender roles, behaviors, and activities, and even suicide. The documentary “unearths how popular pressures around gender and sexuality are confining American teens. Their stories reflect a diversity of experiences, demonstrating how gender role expectations and homophobia are interwoven, and illustrating the different ways that these expectations connect with culture, race and class”.

This PG-13 movie tells the story of two social outcasts becoming friends. Erik suffers teasing in the first five minutes of the movie, taunted as ‘Erika’, after an HIV positive child moves in next door to him. The bullies promptly label Erik as the new neighbor’s ‘boyfriend’. He has no friends and since it is the end of the school year, is perfectly content to sit and play video games all summer. However, his mother has other ideas and takes away his video games. Eventually, he meets his neighbor Dexter while playing outside. He finds that Dexter is as ‘normal’ as he is, playing outside with action figures the exact same
way Erik is. When Erik brings up Dexter’s HIV status and tells him to go away so he does not have to worry about “catching something and dying”, Dexter quickly dispels the myths and the two become friends. They search for a cure for Dexter’s illness, traveling hundreds of miles. The film is an important way of putting a face to people with HIV and AIDS. Although it may not be appropriate for most classrooms because it is PG-13, classrooms at the right age level could benefit from watching some of the scenes of this movie. It shows scenes of bullying, name-calling, and the effect it can have on people when others assume stereotypes are true for everyone in a specific group.

This forty minute documentary is about gay youth in high schools. It discusses homophobic attitudes and behaviors in classroom settings. The NY Times describes it as “a great tool for teaching tolerance and coping skills”.

This PG-13 movie tells the story of an employee working for a conservative law firm. After he is fired by the law firm because he has AIDS, he hires a lawyer, the only lawyer who is willing to take his wrongful dismissal case. The lawyer turns out to be homophobic, however he learns throughout the firm that LGBT men and women lead similar lives to him, that they are not really so different, and that there are many misconceptions about AIDS and how people acquire the disease. This would be suitable for students age 13 and older.

Websites

COLAGE: http://colage.org/

This website provides a community for children of gay, lesbian, bisexual, and transgender parents. The organization works towards decreasing discrimination and working for social justice for the LGBT community and parents. It provides a
scholarship opportunity for students, a pen pal program, and many resources for parents and children. A PDF file of books for children, teens, and young adults with LGBT parents is also on the website and includes some of the books described in this chapter.

COLAGE: http://www.colage.org/resources/safe_classrooms.pdf
This PDF file, from COLAGE’s website (www.colage.org), provides tips for teachers to make classrooms safe and inclusive: 1) Always intervene; 2) Do not make assumptions; 3) Visually show your support; 4) Challenge heterosexism in your assignments; 5) Include topics about diversity in your curriculum; 6) Never out a student with LGBTQ parents; 7) Do not make assumptions about youth with LGBTQ parents; 8) Make your classroom accessible; 9) Work with your administration; and finally, 10) Educate yourself. This file goes into greater detail about each of these ten tips.

The GLSEN website provides a multitude of information to help educators. Similar to other websites, it gives up-to-date news articles on current happenings in Washington D.C., such as initiatives Congress or the President is voting on, or decisions the Supreme Court must make, such as legislation to prevent and stop bullying. It also provides many resources for educators, students, and supporters under the heading “Tools & Tips”. Under the “Booklinks” section, educators can find books suitable for certain grade levels. Many of the books mentioned in this guide are included, however the list contains many more books as well as videos. By clicking on the title, the user comes to a short description of each item. “When Did it Happen: An LGBT History Lesson” provides a lesson plan for teachers to teach their students about the LGBT civil rights movement and historical figures, including matching games, discussion questions, and classroom decoration activities. There is also information on training workshops, and other movements such as the Day of Silence and No Name-Calling Week (found as additional resources in this chapter). The GLSEN Lunchbox is also available for purchase through the Tools & Tips section. It is a toolkit used to help educators and
community members create safe and inclusive learning environments for LGBT students. More information on the toolkit is on the website.

Day of Silence: http://www.dayofsilence.org/index.cfm

The Day of Silence is a day to recognize and affirm the silence that is caused by name-calling, bullying, teasing, and homophobia that is associated with individuals identifying or judged as LGBT. The website offers an organizational guide with information on how to help organize the Day of Silence at your school, as well as the dates for the next Day of Silence. You may also purchase buttons and shirts to signify the Day of Silence. At the time of the writing of this guide, the next Day of Silence is scheduled to be held on April 14, 2010.

This PDF file through the GSA Network website provides a bibliography of fiction and non-fiction books concerning LGBT characters and themes. Some of the books have short descriptions. Most of the books, based on descriptions, seem to be for older children such as teens or young adults.

GSA Network: http://www.gsanetwork.org/resources/pdf/Movies.pdf

This PDF file through the GSA Network website provides a bibliography of films containing LGBT characters and/or themes. The list includes popular movies such as 1998’s The Object Of My Affection about a woman who falls in love with a gay man. The list also contains more serious films and documentaries, including documentaries on transgender individuals and their transition from one gender to another.

Lesbian, Gay, Bisexual, and Transgender Pride Month, 2009:
http://www.whitehouse.gov/the_press_office/Presidential-Proclamation-LGBT-Pride-Month/

This press release from the White House Office of the Press Secretary denotes June 2009 as LGBT Pride Month. It is unclear whether President Obama plans to continue this tradition. He states “LGBT youth should feel safe to learn without the fear of harassment, and LGBT families and seniors should be allowed to live their lives with dignity and respect”.

Page 101 of 148
No Name-Calling Week: http://www.nonamecallingweek.org/
Similar to the Day of Silence, this site promotes a No Name-Calling Week. There are organizational kits and products that can be downloaded for free and purchased to help with this event. The next No Name-Calling Week, at the time of the writing of this guide, is listed on the website as January 25-29, 2010.

Parents, Families, and Friends of Lesbians and Gays: http://www.pflag.org/
This website from the PFLAG organization includes a lot of information about current laws and reforms put into place by the federal government, as well as other news surrounding the LGBT community. It also includes a section under Education and Schools titled “Top 10 Ways to Make Schools Safer”. By clicking on the hyperlink of each of the ten tips, the reader is taken to another page with information on statistics, defined terms, do’s and don’ts on how to handle student harassment, policy making, books and films (some described within this chapter), cyber bullying, education and LGBT youth, and other resources.

Point Foundation: http://www.thepointfoundation.org
The Point Foundation: The National LGBT Scholarship Fund, provides scholarship opportunities to LGBT youth. “Point Foundation provides financial support, mentoring, leadership training and hope to meritorious students who are marginalized due to sexual orientation, gender identity or gender expression”.

Project 10: http://www.project10.org/
“Project 10 is dedicated to providing educational support services to lesbian, gay, bisexual, transgender, and questioning youth who attend public school campuses.” It originated in the Los Angeles Unified School District where it continues as a support system for the LGBT community of adolescents in schools. It serves as a model for other schools, and seeks to prevent drop out, suicide, substance use and abuse, and seeks to reduce verbal and physical harassment and provide accurate information about HIV and AIDS.

Safe Schools Coalition: http://www.safeschoolscoalition.org/
The Safe Schools Coalition is involved in creating safe schools for students and educators of all sexual orientations and gender identities. Included within the vast array of resources, is the link “Curricula & Classroom Tools”. The resources found here include free lesson plans grouped by elementary school, middle school, high school, and college. It also includes month-by-month lesson planning, books, curriculum, videos, music, web sites for pre-K and elementary, middle school, high school and a total K-12 student group. In addition, there are resources specific to subject: coaches and physical education teachers, drama, health, history and civics, language arts, music, and a resource for rural students, staff, and teachers. There are lesson plans that cost money, however, they are relatively inexpensive and the Teaching Tolerance website offers grants for teachers that can include these lesson plans (see below). There are also videos found on the website; in one video, students discuss experiencing and taking part in bullying (Alone, Together). The Use Another Word campaign used in a United States high school was started by students. Tired of hearing racist, sexist, homophobic, and able-ist comments made by their peers, a group of students along with the school administration came up with a pledge and campaign. They simply asked students to respond to other’s derogatory comments with the phrase ‘please use another word’. Since the start of it, the school reports that suspensions involving fighting and defiance have decreased (http://www.safeschoolscoalition.org/UseAnotherWord.pdf).

Teaching Tolerance: http://www.tolerance.org/index.jsp
This website provides lesson plans, articles, classroom activities, titles of books, and other resources for teachers, parents, teens, and kids. In the classroom activity titled “Crocodile and Ghost Bat Have a Hullabaloo”, the website provides a story that teachers may read aloud to their students. It then provides questions for discussion about name-calling, how it can be hurtful, and ways children can respond to name-calling. It is included in a free teaching kit that classroom teachers and other school personnel can order through the website. The teaching kit includes a Teaching Tolerance two-year magazine subscription, DVD and VHS documentaries and shows about the Holocaust and desegregation efforts, as well as an anthology of stories for pre-kindergarten through sixth grade, including “Crocodile and Ghost Bat Have a Hullabaloo”. The website also
offers grants for teachers to develop projects to reduce prejudice, improve relationships within school, and promote staff development.

The Trevor Project is responsible for the only national, 24/7 hotline for suicide and crisis prevention for LGBTQ youth. In 1998, filmmakers of a short movie about a gay teen attempting suicide because of rejection by classmates were set to air their movie on HBO. They found that there was no national hotline for youth who may be experiencing the same feelings as the movie’s character, Trevor. They wished to give viewers a resource during the film’s airing on HBO, so they created the Trevor Helpline. The website provides a place to write to someone with questions (Dear Trevor), warning signs of suicide, as well as the phone number to the hotline: 1-866-4-U-TREVOR (1-866-288-7386).
Cultural Sensitivity Tips

- Provide an opportunity for parents to tell you about themselves, their family, and their culture. This can be done at the first meet and greet or parent conference, or through a form.
- Encourage parents to explain any special needs or circumstances of the family/child to prevent any misunderstandings.
- Do not be afraid to ask questions. Most people prefer that you ask questions rather than make assumptions.
- See your children as human beings. Build relationships with students and show interest in them not pertaining to academics. For example, notice Jenny’s new outfit and compliment her, or ask Billy about his new puppy.
- Actions speak louder than words. Your students will pick up on your actions much quicker than you may expect. Always present yourself professionally and treat others accordingly.
- Educate yourself about any diversity in your classroom. Learn about communication differences and taboos that may exist.
- Do not act as if the child is not there.
- Remember to use person first language; a person is not defined by their disability.
- Take suggestions from parents about what works at home.
- Explore your own attitudes and beliefs about different cultures to increase your own sensitivity to differences.
- Do not talk about the disability as a problem.
- Pay attention to non-verbal signals.
- Do not pity the child.
• Do not point fingers.

• Refrain from judging parents/guardians based on your own expectations.

• Try to see through the parents’ lens.

• Ask questions with an open mind. Do not imply answers to questions about one’s culture. For example, “Isn’t it true that Muslim women are oppressed?”, is a leading question that already assumes the answer.

• Set up opportunities to explore culture.

• Do not say “I don’t see color,” or “you people.” See each student as an individual.

• Utilize open communication among teachers and colleagues as a resource for support and not for gossip.

• Accept what you cannot explain.

• Do not be afraid of change.

• You don’t have to leave your first amendment rights at the door, but you need to leave your prejudices.

• Create a safe place for your students to learn and to express themselves.

• Do not assume that one individual of a culture is representative of everyone in the culture.

• Use a non-sexist curriculum without gender-specific stereotypes.

• Be an advocate for diversity.

• Re-direct putdowns and take action against bullying.

• Be problem solvers not problem dwellers.

• Provide a curriculum that ensures each student can meaningfully participate.
Glossary

Accommodation- Changes in curriculum that will help a student succeed in a classroom.

Aide- “An assistant or helper” (www.dictionary.com).

AIDS- Acquired Immune Deficiency Syndrome; this disease is an immunological disorder caused by the virus HIV; it leads to a decrease in the immune system, which leaves the individual susceptible to rare diseases and cancers such as Kaposi’s Sarcoma (American Heritage Dictionaries, 2006).

American Disability Act (ADA, 1990)- “The Americans with Disabilities Act (ADA) of 1990 was conceived with the goal of integrating people with disabilities into all aspects of American life, particularly the workplace and the marketplace” (http://www.unitedspinal.org/pdf/DisabilityEtiquette.pdf).

Asexual- “lacking interest in or desire for sex” (American Heritage Dictionaries, 2006).

Bisexual- “the human sexual orientation that refers to the aesthetic, romantic, or sexual desire for people of either gender or of either sex” (Maryland School Mental Health Alliance, 2009).

Bullied- “To intimidate or mistreat a weaker person” (Encarta Dictionary).

Coming Out- coming out for homosexual individuals includes these processes: “self-awareness of same-sex attractions; the telling of one or a few people about these attractions; widespread disclosure of same-sex attractions; and identification with the lesbian, gay, and bisexual community” (American Psychological Association, 2008).

Communication Device- An electronic way of speaking.

Conference- “A meeting for consultation or discussion” (www.dictionary.com).

Cross Dresser- someone who dresses as the opposite sex; these individuals are most often heterosexual men who dress as the opposite sex (Lee Marcuzzi, personal communication, June 24, 2009).

Cultural Sensitivity– being aware of and accepting other people’s culture.

Curriculum– sets the course for education. It refers to the set of courses being taught and what is being taught in those courses.

Cyber bullying- “when teens use the Internet, cell phones, or other devices to send or post text or images intended to hurt or embarrass another person” (National Crime Prevention Council, 2009).
Depression- “Depression is a mental health disorder that can affect the way you eat and sleep, the way you feel about yourself, and the way you think about things. A depressive disorder is more than a passing mood. It is not a sign of personal weakness, and it cannot be willed or wished away” (about.com).

Dilemma- “Any difficult or perplexing situation or problem” (www.dictionary.com).

Disability- (a)“ a physical or mental impairment that substantially limits one or more of the major life activities of such individual; (b) A record of such impairment; or (c) Being regarded as having such an impairment.” (P.L. 101-336, Sec., www.ucp.org).

Disposition- refers to the tendency or propensity to respond in specific ways to particular circumstances (Eberly et al., 2007, p. 31)

Diverse Learners- Students who have numerous styles of learning; visual, spatial, auditory etc.

Dominant Race- most influential, prominent, and powerful culture in a geographical location; in the United States it would seem that European American culture is considered the dominant race.

Drag Queen or King- these individuals identify as either gay or lesbian, and they dress as the opposite sex (Lee Marcuzzi, personal communication, June 24, 2009).

Dyslexia:- “Any of various reading disorders associated with impairment of the ability to interpret spatial relationships or to integrate auditory and visual information” www.dictionary.com.

Ethnicity/Ethnic group- relating to a person or to a large group of people who share a national, racial, linguistic, or religious heritage, whether or not they reside in their countries of origin (Encarta Dictionary).

Free Appropriate Public Education (FAPE)- “Requires that public schools provide special education and related services at public expense; meet state standards; include an appropriate preschool, elementary, or secondary education in the state; and maintain conformity with the student’s individual education plan (IEP)” (West & Whitby, 2008, p.2).

Gay- same-sex sexual orientation, between two males or two females (Maryland School Mental Health Alliance, 2009).

Gay-Straight Alliance (GSA)- “a student-run club, typically in a high school, which provides a safe place for students to meet, support each other, talk about issues
related to sexual orientation, and work to end homophobia” (GSA Network, 2008).

**Gender Stereotyping-** A set of perceived behavioral norms associated particularly with males and females in a given social group or system (thefreedictionary, 2009).

**Geographic Diversity-** variation in culture, attitudes, and values between individuals from different geographic locations

**Hegemonic Norm-** the belief that everyone is heterosexual and everyone came from heterosexual families (Straut & Sapon-Shevin, 2002).

**Heterosexism-** “the presumption that all people are heterosexual; the belief, stated or implied, that heterosexuality is superior to homosexuality; the belief that all people should be heterosexual” (Roffman, 2000).

**Heterosexual-** “sexually oriented to persons of the opposite sex” (American Heritage Dictionaries, 2006).

**HIV-** Human Immunodeficiency Virus; a virus that leads to AIDS; the two types are HIV-1 and HIV-2, where HIV-1 is found worldwide and HIV-2 is mainly found in West Africa (American Heritage Dictionaries, 2006).

**Homophobia-** “the fear of, aversion to, or discrimination against homosexuality or homosexuals”; “hatred or disapproval of homosexual people, their lifestyles, sexual behaviors or cultures, and is generally used to assert bigotry” (Maryland School Mental Health Alliance, 2009).

**Homosexual-** “of, relating to, or having a sexual orientation to persons of the same sex” (American Heritage Dictionaries, 2006).

**Individual Education Plan (IEP)-** “A plan for instruction and services developed by a team, including the parents and the professionals who work with the student: the special education teacher, general education teachers, representatives of the school district, and professionals who may provide related services to the students” (West & Whitby, 2008, p.2).

**Individuals with Disabilities Education Act (IDEA)-** “Is a United States Federal Law that governs how states and public agencies provide early intervention, special education, and related services to children with disabilities. It addresses the educational needs of children with disabilities from ages birth to 26\(\text{in cases that involve 13 specified categories of disability}” (www.wikipedia.org).

**Interracial-** between races; diversity between individuals of two different races
Intersex- “describes persons born with the combined anatomy of a male and a female; hermaphrodite defined these persons in the past, but the term is now considered offensive” (Campos, 2005).

Intraracial- within one race; diversity between individuals of the same race

Kinesthesia- the sense that detects bodily position, weight, or movement of the muscles, tendons, and joints (thefreedictionary, 2009).

Learning Style Inventory- an assessment tool which is based on an individual’s response to five categories of preferences. It emphasizes that individuals also have physical and environmental preferences for learning.

Least Restrictive Environment (LRE)- “To ensure that children with disabilities are educated, to the maximum extent ‘appropriate,’ with their nondisabled peers” (West & Whitby, 2008, p.2).

Lesbian- “a female who is exclusively emotionally, sexually, romantically and/or aesthetically attracted to other females” (Maryland School Mental Health Alliance, 2009).

LGBT- an acronym that stands for Lesbian, Gay, Bisexual, and Transgender individuals; it may also include a Q, I, or A to stand for Queer, Questioning, Intersex, or Asexual.

Multicultural Education- an effort by teachers to develop strategies and materials to promote success for all the diverse students in our schools.

Name Day- in Greece, everyone celebrates the "Name Day" of the saint that bears the same name. This usually has no relation to a person's actual birthday except by coincidence.

National Assessment of Educational Progress- The National Assessment of Educational Progress (NAEP), also known as "the Nation's Report Card," is the only nationally representative and continuing assessment of what America's students know and can do in various subject areas. Since 1969, assessments have been conducted periodically in mathematics, reading, science, writing, U.S. history, geography, civics, the arts, and other subjects (National Assessment of Educational Progress, 2009).

National Math Test- The mathematics framework focuses on two dimensions: mathematical content and cognitive demand. By considering these two dimensions for each item in the assessment, the framework ensures that NAEP assesses an appropriate balance of content along with a variety of ways of
knowing and doing mathematics (National Assessment of Educational Progress, 2009).

**National Science Test**- The NAEP science assessment presents a broad view of what American students know and can do in science. The National science test is administered to fourth grade, eighth grade and twelfth grade students (National Assessment of Educational Progress, 2009).

**Obsessive Compulsive Disorder (OCD)**- Obsessive Compulsive Disorder:

“...thoughts, impulses, or images” which are continuous and constant that tend to “cause marked anxiety and distress” amongst the person. “Repetitive behaviors (hand washing, ordering, checking) or mental acts (praying, counting, repeating words silently) that the person feels driven to perform in response to an obsession, or according to rules that must be applied rigidly” (DSM, 2000, p.217).

**Physical Disability**- A physical impairment that limits a person.

**Professional Development** -Skills and knowledge attained for both personal and career development. These skills may be required in order to acquire employment or retain employment (thefreedictionary, 2009).

**Queer**- this word is also a derogatory slur used against LGBT individuals, however recently LGBT youth have reclaimed it to describe themselves; non-LGBT individuals should not use it to refer to anyone since not all LGBT individuals are accepting of the term (Lee Marcuzzi, personal communication, June 24, 2009).

**Questioning**- a phase where an individual experiences exploration and may transition into a different sexual orientation than they previously identified as (Maryland School Mental Health Alliance, 2009).

**Race**- a distinct group of individuals distinguished by local geographic or global human population with similar genetic physical characteristics; a group of individuals united or classified together on the basis of common history, nationality, or geographic distribution.

**Race identity**- sense of belonging and association with a particular group in which an individual shares similar cultural values and beliefs.

**Racial discrimination**- idea that race is the primary determinant of human characteristics and capabilities that allow a particular race to impose judgments of superiority or inferiority upon other races.
Racism- discrimination or prejudice based on race; the idea that one race is superior or inferior to another.

Regress- to move backward; go back (www.dictionary.com).

Scientifically based behavior principles or “principles of scientific research”- the use of rigorous, systematic, and objective methodologies to obtain reliable and valid knowledge. (Extended definition available at AERA.net)

Sexual Orientation- “the direction of one's sexual interest toward members of the same, opposite, or both sexes” (American Heritage Dictionaries, 2006).

Stereotype- an oversimplified standardized image of a person or group (Encarta Dictionary)

Stereotype threat- the idea that a negative stereotype attributed to one’s social or racial group is self-relevant and defines one’s identity.

Stereotypes- an oversimplified generalization or opinion of a member or members of another social group that do not necessary hold true.

Student learning style- It is commonly believed that most people prefer some particular method of interacting with, taking in, and processing stimuli or information. A learning style is the method of learning particular to an individual that is presumed to allow that individual to learn best (thefreedictionary, 2009).

Substitute- “A person or thing acting or serving in place of another” (www.dictionary.com).

Traditional learning style- Learning style based on research conducted by traditional cognitive psychologists is the delivery of knowledge typically from the teacher at the podium to the student seated at their desk (thefreedictionary, 2009).

Transgender- “a variety of individuals, behaviors, and groups involving tendencies that diverge from the normative gender role (women or men) commonly, but not always, assigned at birth, as well as the role traditionally held by society” (Lee Marcuzzi, personal communication, June 24, 2009).

Transition- “Movement, passage, or change from one position, state, stage, subject, concept, etc.” (www.dictionary.com).

Transsexual- an individual who changes his or her biological sex to match his or her gender identity (COLAGE, 2009); these individuals feel that they are the opposite sex than they were biologically born with (Lee Marcuzzi, personal communication, June 24, 2009).
Transvestite- this is a derogatory term to describe people with different sexual orientation, cross-dressers, or drag queens or kings; it should not be used to refer to any person as it is an insult (Lee Marcuzzi, personal communication, June 24, 2009).

Tutoring- “Teach or instruct, especially privately” (www.dictionary.com).

Voluntary segregation- When groups automatically separate themselves based on differences such as race, ethnicity, gender, or ability, etc.
Appendix A: Ethnicity

Deering explored the differences in cultural sensitivity between British students and American students in teacher education programs. The research showed that teachers who are insensitive to a student’s culture are hindering the learning process. Teachers are unprepared to teach students from diverse backgrounds, and teacher education programs should include multicultural courses and plenty of fieldwork. This study expanded on a previous study that “assessed the impact of a multicultural education course on cultural sensitivity of female elementary pre-service teachers” (p. 343). The previous study found that multicultural education courses without field experience produced little change in students’ sensitivity. Deering researched “1. How culturally sensitive are British and American pre-service teachers; 2. What are the similarities and differences between their cultural sensitivity; 3. What effect does a pre-student teaching field experience in a multicultural setting have on their cultural sensitivity” (p. 344)? The study administered the *Cultural Diversity Awareness Inventory* (CDAI) to all participants (22 male and 29 female British students; 27 male and 50 female American students). The results showed that the British students were more culturally sensitive than the American students. Some reasons for this could have been the differences in the countries’ demographic. Both were diverse countries; however British population is denser with a smaller population. British students are exposed to more diversity throughout their lives. With America’s large population and geographic areas, many white Americans do not interact with members of minority groups on a regular basis. In addition, it will be difficult for teacher education programs to change the beliefs and attitudes that students have formed during their previous 18-20 years of life. “Teacher educators must remember that changing attitudes and behavior is a slow and difficult process” (p. 348).

This article looked at the role of “collective identity” in intergroup biases and disparities. It focused on the common in-group identity model, which is “a theoretical framework for reducing intergroup biases and improving intergroup relations.” Social categorization occurs naturally as people group themselves by similarities. The in-group (the group containing the self) is typically referred to as “we,” or “us,” while the out-group is referred to as “they,” or “them.” When this categorization occurs, people often overlook the differences between members of the same group, and exaggerate the differences between groups. The pronouns used to describe the in-group (we, us) are more positive and lead to more favorable evaluations than those used for the out-group (they, them). The common in-group identity model works to re-categorize groups to create one “super ordinate” group rather than two separate groups. “The goal is to reduce bias by systematically altering the perception of intergroup boundaries, redefining who is conceived of as an in-group member (p. 5).” Studies showed that this model was effective with many different groups and settings, including high schools, banking mergers, and blended families. Research showed that a common one-group identity creates more positive inter-group attitudes.

This study researched the dispositions of teachers using Robert Kegan’s adult developmental theory. According to the theory, the desire for teachers to provide a multicultural education to a diverse group of students leads educators to provide skills and tools to teacher candidates, when many of them may not even have the mental capability to use them. Kegan describes five orders of meaning-making consciousness that we all use to approach problems and challenges. The first and second orders are egocentric (me), the third order is ethnocentric (us), and the fourth and fifth orders are worldcentric (all of us). One-half to two-thirds of adults have not reached the fourth order of consciousness, and those few who move into the fifth order are well into their forties before they do. Using this theory, the researchers assessed the dispositions of sixty different college students studying education. The students were separated into two groups and each given a case study to read and
respond to. The results showed that the participants were functioning at the
third order of Kegan’s theory. More research is needed to explain how to help
students make the transformation to the fourth order and have a better
disposition.

strengthening self-esteem, interpersonal relationships, and multicultural
This dissertation discussed the need to implement a program in the chosen
school, to help reduce the amount of stereotyping and prejudice among the
students. Beginning in 4th-6th grades, the number of minority students in the
school, increased drastically. As a result, the number of behavior problems
dealing with stereotyping and prejudice had also increased. The researcher
collected data about the problem through: the use of racial or ethnic slurs in the
classroom; observations of students’ voluntary segregation in unstructured
social situations (cafeteria and playground); sociograms that chart the patterns
of voluntary socialization in the classroom; and administrative records of
referrals involving race and ethnicity. They researched possible causes for
stereotyping and prejudice in children to come up with a practicum to reduce
the behavior. They determined that the goal of the practicum was to reduce
stereotyping among 4th through 6th grade students by strengthening self-esteem,
interpersonal relationships, and multicultural appreciation.

The researchers implemented a 6-pronged solution strategy to reach their goals.
The first strategy was to establish a safe and secure atmosphere that is governed
by consistent authoritative discipline. The students helped create the rules and
the consequences for breaking them. This increased self-esteem and
interpersonal relationships while also decreasing the number of racial and
ethnic slurs in the classroom. The second strategy was to build realistic self-
esteeem through activities that increase security, build selfhood, encourage
affiliation, develop a sense of mission, and promote feelings of personal
efficacy. This led to a reduction in voluntary student segregation in
unstructured social situations, as well as improved interpersonal relationships.
The third strategy was to increase cultural, ethnic, and racial awareness and
appreciation by making American history more inclusive. Interdisciplinary
activities and projects were used to reinforce what the students learned. They
found that this created empathy and decreased the number of identified friends from shared race and ethnicities. The fourth strategy was to provide opportunities for the students to have a positive impact on their environment. The students were able to identify and explore personal skills, talents, abilities, and gifts, and apply them to helping other people. This strengthened self-esteem, reduced conflict in the classroom, and decreased voluntary segregation. It also decreased the number of infractions to administrators involving race and ethnicity. The fifth strategy was to introduce and utilize peer mediation. They found that empowering the students to assume more responsibility for personal behavior reduced the number of referrals to administrators for serious problems. The final strategy was to form a student group to combat stereotyping and prejudice. This reinforced the goals of the practicum and gave the students a chance to put newly gained knowledge and skills to work. They found that it heightened multicultural awareness and appreciation, increased empathy among students, and reduced incidents of stereotyping.

This article discussed the issues of multicultural education and the best way to teach a diverse student population. They examined the terms *culturally sensitive, culturally responsive,* and *culturally competent,* and attempted to define the word *culture.* They conducted research on behavior principles, focused on three different areas of culture, ethnicity, gender, and religion. They examined “ways in which behavior principles apply in particular ways to specific cultural groups and what culturally sensitive practice entails for specific cultural groups.” The authors concluded that scientifically-based behavior principles are the best way to teach all students. The focus should not be on creating instruction that is sensitive to the student’s culture, but to the student as an individual. They feel that one cannot be sensitive to the needs of a student while being insensitive to the student’s culture, and vice versa. The following seven behavior principles were listed as ways to meet the needs of a diverse student population:

1. The student is always right (i.e., the student’s behavior guides instruction).
2. Assessment includes an evaluation of reinforcement history (including behaviors and reinforcers influenced by culture, including ethnicity).

3. Teaching is seen as a science that involves the task analysis of skills, assessment of students’ behavior, the careful development of an intervention, ongoing monitoring of the effects of instruction on the terminal skill, and systematic planning for generalization and maintenance of skills. Indeed only through science will we be able to address the complex problems facing educators.

4. Instructional techniques are completely identified and described (and, therefore, are easier for other educators to replicate).

5. The methodology requires robust, socially relevant results (thereby systematically eliminating strategies with negative, nonexistent, or weak results).

6. Single-subject research methodology involves the analysis of each participant’s behavior so that the independent variable can be analyzed across individuals.

7. Single-subject designs have high internal validity.

“In all cases, cultural sensitivity requires using the most effective acceptable means to help students achieve socially validated objectives.”
Appendix B: Race

Scott and Mumford (2007) cite research from Gay and Kirkland who argue that becoming culturally aware involves a process of “self-reflection” and “critical consciousness” about social problems related to race and ethnicity (p. 54).

Prospective teachers are not properly trained and equipped to work in diverse settings with students that look different from themselves. Researchers have made the argument that students are more likely to succeed when their teachers display cultural sensitivity in the classroom. This has led to a discussion on preparing prospective teachers on how to be culturally sensitive by providing cultural diversity courses (Scott & Mumford, 2007).

A program that has been identified as a tool for preparation of young teachers to work with diverse populations is social foundations of education courses (SFE). The foundation of SFE courses is to prepare students to think critically through reflective practices. These processes include reflection of one’s own thoughts, feelings, and ideas in order to challenge personal ideals and beliefs and encourage change of thoughts, ideas, and actions (Scott & Mumford, 2007).

Scott and Mumford (2007) mentions that this can be challenged through dialogue. Through dialogue, one can begin to reflect on their own contributions to social problems and reflect on ways to change behavior.

SFE courses are primarily used for awareness of cultural diversity, but it may also prove to be effective in increasing cultural competency. In order for one to work toward cultural competency, prospective teachers must gain firsthand knowledge and experience. This includes community or field experience, films, journals, and/or personal stories (Scott & Mumford, 2007).

SFE courses that integrate cultural diversity can create knowledgeable, empowered, informed teachers ready to interact with a diverse student population. SFE courses teach prospective teachers not only to identify a problem, but how to think critically about new and innovative ways to approach and solve problems. Scott acknowledges that one class will not completely change one’s belief, but it can improve attitudes and awareness of diversity (Scott & Mumford, 2007).
Markus, H. R. (2008, November). Pride, prejudice, and ambivalence: toward a unified theory of race and ethnicity. *American Psychologist, 651-670.* For years, researchers have had a hard time defining and distinguishing race and ethnicity because they are highly interrelated. The literature here suggests that scholars have had such a hard time with these two terms because in science at one time race and ethnicity were referred to as biological in nature, whereas Markus suggests in his literature that they are social entities (Markus, 2008). Markus says, “Both race and ethnicity are dynamic sets of ideas, and practices that people create to distinguish groups and organize their own communities” (Markus, 2008, p. 654).

Markus along with his colleague Paul Moya, define race as a “dynamic set of historically derived and institutionalized ideas and practices that sorts people into ethnic groups according to perceived physical and behavioral human characteristics; associates differential value, power, and privilege with these characteristics, and establishes a social status ranking among the different groups…” (Markus, 2008, p. 654). Race has been described as an index of power, authority, and privilege of one group over another. It is a way of categorizing or distinguishing significantly different groups from one another (Markus, 2008).

Race was thought to be biological in nature because society attributed certain traits and characteristics to groups and generalized it to all who belonged to that race. Williams and Eberhardt found that those who held on to the notion that race was biological were more likely to endorse stereotypes, had very few friends of different races, and attributed negative qualities of people of other races to biological traits (Markus, 2008).

Markus (2008) argues that race and ethnicity are not biological in nature; instead, they are the result of society’s way of making sense of systematic behaviors that guide one’s own behaviors and explain the behaviors of others. He makes the case that race is defined by others not associated with the group. Categorizing groups has little to do with values, traditions, beliefs, and/or behaviors of those associated with that group. Racial differences are imposed by another group and are not necessarily endorsed by the group itself (Markus, 2008).

The author and teacher, Danielle Cicetti-Turro, delivers a story about her experience working with students who were different from herself. She discusses how she walked in with preconceived notions about what the class was going to be like and tried to elicit the help of one of her colleagues, Mrs. Watkins. Mrs. Watkins turned her down and Turro was forced to take on the task alone. For some time she and Mrs. Watkins did not speak to one another until one day Mrs. Watkins asked Turro for one of the journals she had begun using with her students in class. Mrs. Watkins began an open-dialogue with Turro about race and a variety of other topics through this journal. As Turro reflects back on her experience, she realized that there was some reasoning behind Mrs. Watkins actions. She expected Mrs. Watkins to trust her without earning her trust and respect first. Turro realized that she was the minority for once and was placed in a position where she had to prove herself and earn others’ respect (Cicetti-Turro, 2007).

Turro (2007) discloses her experience to convey the message that she, along with many other educators, promote what Lisa Delpit refers to as “silenced dialogue” (p.45). This occurs when conversations about race fall on deaf ears because of denial or inability to be sensitive to what one has to say (Cicetti-Turro, 2007). Research by Tatum has shown that people of color usually develop their racial identity earlier than European-Americans or whites. Groups that have developed their racial identity are generally more comfortable in diverse situations. Conversations about race usually occur with people of color instead of with people who need to participate in them the most. Racial identity has shown some relation to academic achievement. Aside from families, teachers have the most influence on socializing children. Pedagogical models must address diversity from a perspective of cultural awareness and be careful to avoid blaming or defensive attitudes that may result in miscommunication and ill feelings. Teachers need to be trained to move beyond traditional practices of education into respect, care, concern, and open-dialogue of students that look different from themselves (Cicetti-Turro, 2007).
Turro (2007), in her discussion on diversity, says that there is a “bare minimum” when it comes to diversity. She explains it as exploration and acceptance of one’s own racial identity. Teachers must help close the distance across race lines, especially with whites. Turro (2007) ends her story by posing the question, “Had I not been forced into an unfamiliar and uncomfortable situation, would I have been open to what Mrs. Watkins had to say? I still wonder” (p. 48).

Atwater (2008) discusses the ongoing debate of color-blindness that suggests that “race should not matter” and “race does not matter” as it applies to American education (p.246). The “race should not matter” phenomenon is the idea that everyone should be treated equal regardless of race, whereas the “race does not matter” phenomenon suggests ignoring racial differences even though they do exist (Atwater, 2008).

Atwater (2008) provides data from various researchers that confirms these notions. Teachers generally bring cultural biases and assumptions to their classroom that they are sometimes unaware of. Regardless of whether the assumptions are conscious or unconscious, they have an impact on teacher attitudes and behaviors, and student academic achievement. Some teachers see race and culture as a “deficit” to their individual development and academic achievement (Atwater, 2008).

Atwater discusses the work of Steele and Aronson who developed a term called “stereotype threat” (Atwater, 2008, p. 248). One experiences stereotype threat when they begin to believe the negative traits attributed to one’s group to be true of themselves. For example, African Americans and Hispanics believing that they are poor and will never succeed.

Pappas discussed the “invisible” culture among Americans, which is the belief that they have no true culture. Whites see themselves as the privileged majority yet they may fail to recognize that they too have culture and are a part of a race. Atwater (2008) offers the idea of diversity training as a way to address cultural sensitivity. The training suggested by Zeicher and others is two-fold (Atwater, 2008). The first part encompasses cultural knowledge that seeks to teach about different cultures and learning styles. The second part is color consciousness
that encourages self-awareness and reflection of one’s own attitudes and beliefs
(Atwater, 2008).

Ligget (2008) provides data from the US Department of Education that
indicates that over 80% of the teaching profession is comprised of White
American teachers, while there remain a relatively low number of teachers of
color in this profession. On the opposite end, there is an increase in students of
color enrolled in schools, especially in low-income neighborhoods (Ligget,
2008).

Ligget (2008) discusses the social construction of racial discourse and suggests
that much of the miscommunication and assumptions of race come from what
Foucault refers to as the “pre-conceptual level” (p.388). On this level, positions
and categories of power between groups have been determined throughout
history and have formulated the terms and concepts of racism that we are
familiar with today. This produces a hierarchy of classification that suggests
that there are races that are superior to others (Ligget, 2008).

Ligget (2008) found that White Americans do not identify themselves as
members of a racial group and often times fail to explore their racial identity
until later than other racial groups. Research shows that identification with a
racial group plays a significant role in identity development (Ligget, 2008).

Ligget (2008) suggests helping teachers learn to explore their racial identities in
order to understand diversity and learn how to respond to members of other
racial groups. She mentions the idea of re-contextualizing interaction with one
another (Ligget, 2008). Ligget (2008) says that this happens through self-
exploration and shifting education programs to embrace multiculturalism.

Brief*. US Census Bureau, US Department of Commerce.
This article provides statistics from the 2000 US Census on race and ethnicity in
the United States. It breaks down the statistics of how Americans classified
themselves based upon their race. Also discusses how Hispanic/Latino is not
listed as a main category of race because there are so many sub-cultures under
the category, making it a concept of ethnicity rather than race.
Appendix C: Geographic Diversity

Researchers investigated the variables related to mood and anxiety disorders in urban and rural United States residents. They used data from the National Comorbidity Survey (NCS) to analyze differences in the prevalence of mood and anxiety disorders based on gender, race, and geographic location. Regardless of geographic location, African Americans reported having mood disorders less than Whites. There were no gender differences in the prevalence of mood or anxiety disorders among rural residents. This is a reflection of the greater frequency of mood and anxiety disorders reported by rural males. One valid explanation discussed in this article for the greater prevalence of disorders in rural males was growing financial strain from a lack of secure, high paying jobs. These authors provided insights based on their collective backgrounds in health policy and management, mental hygiene, behavior and community health, and epidemiology and preventative medicine.

Using data from American Gallup Polls, researchers investigated the differences in attitude and behavior between urban and rural residents. They determined that a clear distinction between urban and rural individuals does not exist; rather, attitude and behavior differ based on a continuum. According to the data used in this study, rural individuals tend to have more conservative and religious views, while urban individuals tend to be at the other end of the continuum with more liberal and less religious views. Individuals from intermediate-sized communities tend to fall somewhere in between. The authors responsible for this research have experience in sociology.

Using data from the 1990 and 2000 U.S. Censuses, as well as the 2005 American Community Survey (ACS), the authors explored immigrant preference of residency location. They discovered that a growing number of immigrants choose to live in rural areas. They attributed the rise in rural immigrant populations to the ever increasing numbers of immigrants into the United States in general. They also pointed out that immigrants who choose to live in rural locations tend to be less educated than those who choose to live in metropolitan locations. The influx of an immigrant population into rural communities highlights a need for those communities to adapt to this change. The authors provided insights based on their backgrounds in agricultural and spatial economics.

Researchers examined the differences in leisure time physical activity (LTPA) between urban and rural middle-aged and older women. Survey results revealed that rural women were more sedentary than urban women. The correlates of sedentary lifestyle unique to rural women were American Indian/Alaskan Native and African American race, lack of enjoyable scenery, and not frequently seeing others exercise. The correlates of sedentary lifestyle that both urban and rural women had in common were older age, less education, and lack of social support. The tendency toward a sedentary lifestyle among rural women is a societal trend that requires attention. The authors responsible for this research have experience with medicine, public health, exercise science, and disease prevention.

Using parent and teacher report data from epidemiological surveys of children from Connecticut, researchers studied urban and rural differences in child psychopathology. They observed greater disturbances in urban girls and boys. Parents and teachers of urban girls reported greater behavioral disturbance and social withdrawal, as well as greater total disturbance. Parents and teachers of
urban boys reported greater emotional disturbance. The researchers attributed higher rates of child psychopathology in urban children to economic and cultural differences that exist between urban and rural individuals. The authors of this study present information based on their backgrounds in epidemiology, public health, mental health, and biostatistics.
Appendix D: Religion

As the needs of society change, the schools must also be willing to change to meet these needs. Religion is a topic that can no longer be ignored in schools, and the present authors feel teachers should re-introduce religious diversity in a way that promotes an understanding and positive reception of those differences. This article examines the function of religion in schools and makes suggestions on how to incorporate religion into the school curriculum. Our authors stress the importance religion has on understanding events in history, world events and the content in social studies. They feel that this alone challenges our perception that the church and state must be separated. The article states that efforts to include multicultural education in schools have been successful but they do not take an in-depth look into religion. The authors suggest that we should support a less narrow school curriculum that promotes religious education in elementary and middle schools. Promoting this change in school curriculum will result in more positive interactions and relationships in society as a whole. The article also notes that challenges such as: the teacher’s lack of knowledge of world religions and the lack of skills required to teach the content is why this topic is avoided. The authors suggest a training program for teachers to help develop the curriculum and materials. Lastly, the article recognizes that success depends on the involvement of multiple stakeholders including: parents, community groups, policy makers, foundations and administration.

This study focuses on improving cultural sensitivity by becoming aware of the individual factors that affect one’s attitude and beliefs about diversity. It is important to recognize that what you possess as a person (your views and beliefs) affects your interactions with others. A review of previous research suggested that diversity courses are important in teacher preparation but that these courses have different effects on every student in terms of changing their attitude or beliefs. Many courses are broadly defined and others are more
narrowly focused. In this study, a 22-year-old Caucasian woman was used to evaluate changes in cultural awareness. The method consisted of more than 10 hours of interviews in which the participant was asked to talk about her experiences, both past and present, with diversity and reflect upon what she has learned up to the present time. Through the interviews, six categories were drawn out that appeared to contribute to her change in perceptions. The dispositional factors included: openness, self-awareness/self-reflectiveness, and commitment to social justice. The experiential factors included: intercultural experiences, support group experiences, and educational experiences. Findings indicated that all these factors should be considered. Results show that these factors could be indicators of a teacher’s readiness to learn from cultural experiences. Researchers do suggest that follow up is needed to determine if these factors are consistent with teachers who show growth in cultural sensitivity. This study implies that cultural awareness starts with identifying and challenging your own beliefs and attitudes.

This article makes the strong point that teachers, parents and administrators must work together to increase understanding of the diverse backgrounds of students. The authors do an excellent job of providing the reader with case scenarios and an opportunity to discuss some of the issues that children of different cultures may face in schools. Because classrooms are becoming increasingly diverse, it is important that the school environment becomes sensitive to individual needs. The authors feel that by exploring religious diversity through meetings, workshops and class instruction, we can raise awareness of their needs/problems and offer support to the students and their families.

This article discusses how teachers can include diversity in the classroom. It provides an easy to read lesson that utilizes twenty strategies to help educators increase their effectiveness in teaching children with disabilities who are from diverse cultures. It is noted that each child brings something unique from his or her culture and teachers must be able to respond to this uniqueness. It is up to
teachers to foster these differences to promote school success. Not only are
these strategies meant to help educators communicate with their students, but
also with their families, who are at the core of their beliefs, traditions and
values.
Cruz, B. C. & Patterson, J. M. (2005). Cross-cultural simulations in teacher education:
Developing empathy and understanding. *Multicultural Perspectives, 7*(2), 40-47.
Many teachers today are not prepared for a growing diverse population, which
is why teacher training programs are so important. This article discusses one
way of preparing teachers to handle issues of diversity and the challenges they
face as educators of this diverse population. The method discussed is known as
cross-cultural simulation. The authors suggest that when teacher training
programs include discussion, modeling, field experiences and observations,
they will be more meaningful and provide more opportunity for appreciation
and understanding of different cultures.
Appendix E: Gender

This study traced the gender differences in learning opportunities in mathematics among African American, Latino, and White students from eighth grade to tenth grade. In the study the researchers found female students do not lag behind males at this age. The study suggests that females tend to have less interest and confidence with their math abilities.

This article reviews the literature and research on differences in boys and girls learning math skills and in their math achievement scores. The conclusion the authors reach is that girls and boys learn and process mathematics differently, yet our traditional educational system does not take this into consideration.

In this study the authors demonstrate the average sex differences on most measured tests of abilities are small with the exception of science, writing and male vocational aptitude. The data suggests there is not a major difference in gender education.

The author states that claims of gender differences are not clear that males and females are alike in most psychological variables. A review provided of 46 meta-analyses support her claims of gender similarities.

All around the world educational opportunities for girls are more limited than those for boys. The articles in this book are the outcome of papers presented by a small group at a colloquium that focused on what happens to girls inside the classroom. Some of the issues discussed were pedagogy, girls, learning theory, and intervention projects.

This article discusses deep cultural roots that have a significant influence on the learning style of Southeast Asian students (Cambodians, Hmong, Lao, and Vietnamese). The Southeast Asians have cultural roots that include deep respect for authority, commitment to family values, and male dominance.

Barbara Prashnig wrote this practical guide on the Learning Style Inventory assessment tool. She explains in a simple and understandable way how to use the assessment tool to modify teaching styles to meet student learning preferences in the school environment. The author describes in each chapter a component of the inventory and how to apply it in various situations.

In this article the authors view gender learning differences from various models. The epistemological model describes females as using different patterns of reasoning compared to men. Women are more open to accepting alternative perspectives of learning into their own views. On the other hand, males’ learning focused more on their own individual perspectives of knowing. The authors then compared the Epistemological Model to Vermut’s Theory which focuses on student learning styles which include how to study, what the student does to continue studying, and the reason for studying.

Existing research in this study has revealed a significant gender variation in educational attainment. Female youth have obtained higher levels of education than their male counterparts. This is significant among first generational immigrants.
Appendix F: Disability

“Serving culturally diverse families of infants and toddlers with disabilities” is a piece that originated from a meeting held by “Project Zero to Three.” This piece begins with a contents section in which it mentions the different sections that are included throughout the document. The “Culture-The All-Encompassing Variable” section is extremely helpful in defining and understanding the importance of culture. The authors mention the importance of understanding that decisions and choices vary depending on culture, and it must be respected. The piece goes on to share “Examples of Health, Illness and Disability Belief and Practice Tendencies in Different Cultural Groups” (Anderson & Fenichel, 1998, p.5). Also included in this piece are effective means of communication and “examples of communication and interactional tendencies in different cultural groups” (Anderson & Fenichel, 1998, p.5). At the end of the piece there are helpful recommendations for future readings. The authors have provided us with an extremely beneficial reading in understanding disability and the importance of remaining culturally sensitive.

In this article the authors focus on how urban African American families feel about cultural sensitivity in the special education system. The article is centered on two topics: whether or not African Americans feel their children receive appropriate services, and if they feel the planning is culturally sensitive. It also focuses on whether or not these parents feel it is important to be culturally sensitive when dealing with services. It discusses whether they feel they are included in the planning and to what extent they are a “partner.” The study asks parents what they feel are “important cultural beliefs and values” that should be included by the schools. Finally, the discussion of different “cross-cultural training” that schools should take part in before “working directly with families who share their cultural beliefs and values” (Bellinger et. al., 2003, p.42). Interviews including different open-ended questions were given to
different families. There were six commonalities that the interviewees experienced. The first is, “respect for parents and children by school personnel.” Second, “perceived negatively toward children and/or parents by schools.” Third, “need for information and assistance using community support services.” Fourth, “desire for greater cultural understanding and demonstrated acceptance of differences by school personnel.” Fifth, “issues of quality and training among teachers and other school personnel.” Sixth, “improved teacher-parent and parent-parent partnerships” (Bellinger et. al., 2003, p.41). Through these conclusions, the authors have created suggestions for schools so that they can be more culturally sensitive to families of children with disabilities.

The main focus of this article is presenting the importance of understanding that our society does not have the necessary respect for cultural diversity. Part H of IDEA and its emphasis on “. . . the importance of ‘carrying out early intervention activities in a ‘culturally competent’ way’” is central. It is imperative for social workers to have “culturally competent” skills in order to work with families of children with disabilities. Part H of IDEA is specifically geared toward early intervention. Part H was introduced to IDEA in order to help with creating an environment that is family centered. It specifically states: “Families [must] have access to culturally competent services within their local areas” (Bishop et. al, 1994, p.2). The article continues to explain the principles of culturally competent practice, one being, “a set of congruent behaviors, attitudes, and policies that come together in a system, agency, or among professionals and enable that system, agency, or those professionals to work effectively in cross-cultural situation” (Bishop et. al, 1994, p.3). The authors feel it is important to understand cultural competence and to include it in practice.

The authors in this study focus on the importance of being culturally sensitive during interviews and throughout the development of Individualized Education Plans (IEPS). It is imperative to understand what “cultural sensitivity” is and what it entails. The authors suggest that “Cultural sensitivity implies an awareness of the influences of other isolated or multiple factors that
can impact and shape the priorities and perspectives of individuals and families in our society” (p.104). They suggest many important factors that influence cultural sensitivity. This study specifically reviews a previous planning tool called COACH. The altercation of COACH was to include “the need to explore the design of the tool for use in more culturally diverse settings” (Dennis & Giangrecom, 1996, p.105). After one hour interviews with fourteen participants the results and recommendations were drawn. “Recommendations for professionals include increasing their own knowledge base about other cultures; examining their own cultural biases; providing a family focus; allowing sufficient time for comfortable interviews; and considering time, place, and language needs” (Dennis & Giangrecom, 1996, p.103). With these recommendations, hopefully, there will be more cultural sensitivity when communicating with families and schools.

In this study, the author was interested in exploring the different expectations of Chinese families of children with disabilities in schools. The author mentions how under IDEA regulations, parents are to be included in the planning and preparation of their child’s Individualized Education Plan (IEP). It is also mentioned that there is a large increase of ethnically diverse children who receive special education. Therefore, teachers and administrators need to be aware of the cultural differences within the special education population. The author states, “These families felt that many teachers, especially the Caucasian teachers, did not have a solid cultural understanding of them and their children. Some families also reported that cultural sensitivity did not exist in their children’s schools” (Lo, 2008, p.75). With the information gathered in this study, schools can better improve their relationships with diverse families. The results which were founded through interviews, of what some families believe should be included in American schools are, “(1) accessibility of equality interpreters, (2) cultural sensitivity among professionals, (3) advocacy, (4) home-school communication, and (5) parent education” (Lo, 2008, p.73). The authors conclude their study with different strategies that can be implemented in schools in order to develop stronger relationships between schools and families.
Appendix G: Sexual Orientation

Various terminology used in this section are derived from www.dictionary.com’s website using definitions solely from the American Heritage Dictionaries of the English Language.

This brochure from the American Psychological Association’s website offers information on sexual orientation, specifically gay, lesbian, and bisexual issues. It is set up in a question and answer format. It may be a good discussion piece for older children to read and ask questions about. It is very informative and discusses coming out for individuals, including adolescents.

This essential resource gives educators and other school personnel information about the homosexual community. It includes statistics and facts, different developmental milestones that homosexual youth face, myths of homosexual people, the history of the gay and lesbian community, curriculum that promotes including GLBT youth, and even resources for schools, to name a few. In the book is a historical timeline of important events in the gay and lesbian civil rights movement, which includes the Stonewall Riots that occurred in New York City. The Stonewall Inn, a gay bar that was frequently harassed in the 1960s by police, was raided, and is considered by some to be the start of the gay-rights movement. It is largely unheard of however, and was not formally recognized by the White House until the forty-year anniversary of its occurrence, (as evidenced by Frank Rich’s June 28, 2009 article in the New York Times, 40 Years Later, Still Second-Class Americans.) The book also lists and describes famous people who identify as homosexual for schools to provide role models for students.

In this controversial and award winning documentary, teachers are filmed in his or her classroom discussing gay issues with students. From first to eighth grade, the students asked questions, discussed stereotypes, read books about same-sex parents, and met young adults like them who are gay or lesbian. The children in the video were more informed than many may believe. In a class of fourth grades, children knew about cross-dressing and what it is. In third grade, students knew what the term ‘homophobia’ meant. Other students expressed the understanding that gay people are the same as anyone else and how biases and stereotypes can affect a person’s life. In a combined first and second grade class, children created a picture book detailing issues they had faced such as being teased or called ‘gay’. The students were also able to talk about issues such as gay marriage, and as young as first grade, they understood to put yourself in another person’s shoes. A parent in the film suggested that bringing up gay issues “opens the dialogue so even if you are against the lifestyle, it still needs to be there, it still needs to be addressed.” The teachers used different techniques such as mapping and clustering with the words stereotype and gay and having class discussions by asking questions. Using role models and pictures of famous people and having students decide if they are gay or not are important ways to teach that you cannot tell who is gay by how they dress or act. One teacher mentioned when hearing derogatory terms, that “you can’t just say stop, you have to educate about it, and if you don’t educate about it, it won’t stop.” It is suggested that if teachers do not step in when there is harassment or name calling, it sends the message that those behaviors are acceptable. During a class assembly, a movement teacher shows the children how hard it would be to play soccer and have to hide your leg. He equates this with the difficulty of hiding a part of yourself, particularly being gay, and the understanding by the students is incredible.

This film is, and should be, a vital part of the curriculum of future teachers. It gives future teachers a real life example of how to start a dialogue or bring up gay issues in the classroom. Discussing different families and lifestyles changed the beliefs of many of the students in the film and they realized that people who identify as gay are just like anyone else.

This newly released DVD version of *It’s elementary: Talking about gay issues in schools* includes the original 1995 documentary and can be found in the Groundspark store (http://groundspark.org/store/home_users). It also includes a 37-minute educational training video as well as a guide for curriculum planning and professional development in K-8th grade settings. In addition, it introduces the new 51-minute documentary *It's STILL elementary*, in which the director Debra Chasnoffe revisits some of the footage from the original video, as well as interviews with some of the students from the original video who are now young adults. In a clip from the Groundspark website, Chloe Moushey, one of the children interviewed now as a young adult, commented that “learning about gay and lesbian issues gave us vocabulary to talk about it, it gave us a forum to ask the questions that we wanted to ask. Our teachers were sensitive about the issue, but they were also very neutral. They would just give us the facts, they would answer our questions honestly andtruthfully…I think that learning about these things that people don’t usually talk about has given me tools to ask questions about other issues. Education is never wrong. If you present the facts and you allow someone to think about it for themselves, I don’t think that there are very many downsides of that” (clip retrieved July 5, 2009, from http://groundspark.org/our-films-and-campaigns/stillelementary/ie2_clips).

This article tells the story of Lawrence King, a fifteen year old from California who identified as gay. He experienced bullying by his classmates and another student, on February 12, 2008; they shot him twice, killing him. Physical appearance such as appearing weak or obese, clothing, high grades, non-normative behavior or looks such as acting ‘weird’ or ‘geeky’, and especially gender behavior that society does not consider ‘normal’ are all reasons for bullies choosing their victims.

This website provides information on GSA’s and how to start one. It also includes many links to information about laws, resources, books, and national LGBT-centered days, such as the day of silence.

This episode of The Oprah Winfrey Show, tells the story of Carl Walker-Hoover and Jaheem Herrera, two students who completed suicide because they were bullied. The students who bullied them teased them for acting or looking gay, although neither student identified as such. The episode centers on bullying, however suicide and suicidal thoughts are increasingly becoming associated with bullying and can unfortunately become the result of months or years of tormenting and teasing.

This article reviews texts and films about gay and lesbian individuals that are useful for students learning to be teachers, as well as in their classrooms in the future. Teachers and pre-service teachers who wish to use these materials to educate their students may face barriers such as various governments at state and city levels banning books from libraries or threatening to cut funding to libraries with elementary school level books about gay individuals. Parents also make complaints about books their children may bring home from school. There is also a lack of books on this topic in general.

The author suggests teaching about the topics of homophobia and heterosexism in the classrooms of pre-service teachers. Silence about this issue is similar to silence about racist, sexist, or classist stereotypes, comments, or remarks. The silence allows individuals to consider those stereotypes as correct and true of that individual or group. The author cites studies that have found that the majority of students are willing to read books that center around gay and lesbian individuals. If nothing else, they are informative of different families and different lifestyles. The author gives several resources, but first mentions that most of the books or literature she has read on multicultural or diversity issues barely mention gay and lesbian topics. An important resource she notes
is an introductory book on children’s literature, a rare resource that equates discrimination of gay and lesbian individuals to that of discrimination against minority races or prejudice based on gender. The various children’s books that the author refers to most often do not show issues and struggles of gay and lesbian families, however they do show pictures of same sex parents with their children. The author also mentions books that deal with issues such as comments from peers about another student’s family picture drawings of same-sex families. A fairytale, akin to Cinderella, about two princes falling in love has been a controversial book. A story of two male penguins partnered together details the couple finally having the chance to raise an orphaned baby penguin after years of watching opposite sex parents have babies.

This article is an important source of information on children’s literature that includes gay and lesbian families and issues. However, it does not provide insight into how to answer children’s questions about the books or about the different lifestyles of families. Despite this fact, the books and videos mentioned are a good starting point for teachers to begin the discussion of sexual orientation, which may be the biggest obstacle for teachers.

This report, researched and published by the Gay, Lesbian, and Straight Education Network (GLSEN), surveyed over 6,000 students from every state in the United States, including the District of Columbia. The students identify themselves as lesbian, gay, bisexual, or transgender (LGBT). The authors recruited from randomly selected community groups that support and serve LGBT youth throughout this country, including GLSEN chapters and other organizations that advocate for youth. They also enlisted the use of websites and the internet, including social networking sites to administer their survey to LGBT students.

The report includes many statistical findings ranging from harassment, to teacher involvement, to educational outcomes. For instance, over two thirds of the students surveyed felt unsafe in school due to a personal characteristic, such as sexual orientation or race. Similarly, 32.8% missed at least one day of school
in the past month because they felt unsafe or uncomfortable. In terms of harassment, 86.2% experienced verbal harassment, almost a quarter of the sample experienced physical assault, and over half were victims of what is known as ‘cyber bullying’ in the past year. Participants also noted that they did not report harassment because of the belief that staff would not be effective in helping the situation, or it would make it worse. Those who did report incidences said that most often the teacher or school did not do anything. The authors also found that students in the South, from small or rural towns, and from areas with high poverty levels reported more victimization due to sexual orientation. Victimization also leads to harmful effects on education. The participants, who reported being frequently physically harassed due to their sexual orientation, also admitted having lower grades than other students did. More positively, students felt a greater belonging to the school if he or she told students and staff about his or her sexual orientation. Eight out of ten participants also knew of a school staff member he or she felt was supportive of students with a different sexual orientation.

The first of several limitations to this report is that it is not a peer-reviewed journal article. In addition, because of the anonymity of the survey, participants could provide false information, but this risk could be small and the large sample size is beneficial. The risk of false information in the surveys is also a problem for the surveys conducted through websites such as social networking sites. However, the authors included this method because they wanted to reach LGBT youth who do not have connections to community-based organizations. The sample is also limited because some students may not openly identify as LGBT even though they engage in same-sex sexual behavior, and so they are lacking in appropriate representation. Finally, the authors note that the representation of Latino, Latina, and African American LGBT students is lacking.

This article, written by a professor of education and her daughter, offers suggestions on how to make gay families and their children feel safe and comfortable in schools. First, they suggest school personnel do not tolerate harassment, including derogatory terms. Also, provide diversity training not
just for school personnel, but also for students. Another suggestion is to celebrate gay pride week, and to include noteworthy or famous individuals in class. Similar to other research, the authors believe gay-straight alliances, or GSAs, should receive support from the school and its staff. In addition, it is important to make sure library and media resources include books and other materials on diverse families, sexual orientation, gender identity, and even fiction that includes characters that may identify as gay, lesbian, bisexual, or transgender.

Ideas for teachers include sending home two copies of papers, handouts, or other items in case a family is divorced. This is beneficial not only to gay families who were previously part of heterosexual families, but also for any divorced family. It also can be hurtful to ask who the ‘real’ parent is, suggesting the biological parent is more important, if one exists in the family situation. In addition, they advise that teachers realize that the family may be ‘closeted’, so the parents have not disclosed their sexual orientation to others. The risks of disclosure can be hurtful to the family and to the child. Along these lines, teachers should not ask a student to discuss his or her family in the classroom to avoid the disclosure issue. Finally, the school should be sure to include parents in volunteer activities or ask them to speak to classes if they are willing, in addition to including both gay and straight students in important activities such as prom.

A major limitation of this article is that the peer-review status of the journal is unknown. Therefore, experts in the field of research and journal writing have not read and reviewed this article for credibility. However, it is important to note that these are suggestions based on two individual’s research of some literature and possibly their opinions. These suggestions and ideas may not be empirically tested, but can be opinions, ideas, or suggestions from gay families who are on the receiving end of harassment and bullying.

This PDF file through the School Mental Health website provides definitions of terms associated with the LGBT community. It also includes a ‘why do we
care?’ section with important statistics and facts about LGBT adolescents. It

gives tips and resources to teachers to make schools and classrooms safe.

schooling. Quest, 57, 426-443.

In this paper, the authors have compiled research on sexual orientation and

schools and have come up with three ways to promote safe, open, and equal

school for gay, lesbian, and straight students. First, schools must consider the

experiences of these youth in school, home, and the community. Second,

consider the consequences of victimizing students based on sexuality. Finally,

teachers in physical education and sports coaches can help create a school

atmosphere that is sensitive to differences in sexuality. The authors stress that

the sense of feeling different that emerges from individuals who are lesbian,

gay, or questioning their sexuality is not exclusive to the onset of puberty. As

reported by Treadway and Yoakum (1992), it can emerge at the young age of

five, or in the teenage years as Morrow (1997) noted in this article. Teachers and

staff of all grade levels should be aware of the victimization that can occur with

this youth group. The authors give many suggestions for teachers and schools,

and physical education and coaches in particular, for making school safe for all

students, especially lesbian and gay students. They suggest a consistent, school-

wide tolerance and respect policy that adds terms such as ‘sexuality tolerance’,

‘freedom’, and ‘diversity’ into the policy or mission of the school. A zero

tolerance policy on disciplining students for victimization based on hate is also

necessary and this should include ways for students or staff to make

anonymous reports of victimization, and to have school activities monitored for

sexuality victimization. Education and awareness training for faculty and

students is important, as well as support for gay and lesbian role models,

including teachers. Finally, making literature on sexuality available within the

school and supporting groups or clubs that promote safe gay and straight

student communication and interactions are recommendations.

from http://www.ncpc.org/cyberbullying/?searchterm=cyberbullying

This website provides information on cyber bullying. Cyber bullying is the use

of cell phones, internet websites, or social networking sites among other ways
to intentionally harass or harm another student. The website also gives tips on
how to prevent cyber bullying from happening.
New York: National Gay and Lesbian Task Force Policy Institute and the
http://www.thetaskforce.org/downloads/HomelessYouth.pdf
This is a publication on the homeless adolescent LGBT community. It discusses
effects on schooling, mental health, sexual activity, and many other topics. It
includes discrimination in terms of resources, the juvenile justice system, and
victimization of homeless LGBT adolescents.
This article was used for its definition of heterosexism. However, for those
interested in school policy issues for gay and lesbian youth, this article
discusses four policy options for schools in regards to homosexuality.
Schall, J., & Kauffman, G. (2003). Exploring literature with gay and lesbian characters in
the elementary school. Journal of Children’s Literature, 29(1), 36-45.
A fourth grade and fifth grade multi-age class teacher and a graduate student
who teaches undergraduates about literature sought to find a way to bring up
the topic of homosexuality in the classroom. The author teaching the class
focused on themes throughout the school year, and one included how the
students could survive his or her next year of school. The students and teacher
discussed that a classroom built on choices, trust, and the chance to voice one’s
own opinion would help create class environments where children can learn
safely. Then, the teacher read a story aloud to the class about two princes falling
in love. She allowed the students to voice their opinions and initial reactions,
and then gave them the choice to read more books with the subject of same-sex
parenthood or partnership. After the children had read his or her choice of
books for 45 minutes, they held discussions about the readings. The students
expressed concern over why a person who liked someone of the same sex is
subject to name-calling. One student suggested that calling someone a name is
wrong because no one should make fun of another person just because he or
she loves someone of the same sex. The students also discussed a need to
understand different kinds of relationships, especially the ones from the books they read. The authors also write that “even though the children verbalized that it was important to treat others with respect, they recognized that many times when confronted with situations they didn’t understand, they responded in negative ways. They thought that if they were told what was going on and were helped to understand others, they would be more tolerant of each other.” (p. 41)

The discussions continued with the children bringing up the need for truth. The students wondered why they had no knowledge of the reality of a person being homosexual. Their knowledge of homosexuality came mostly from some friends and close-in-age family members, but did not come from adults. The ‘secret’ of being gay was also discussed, and most students agreed that a person cannot control whom they like or love and they should be themselves. Another student even suggested that if homosexual couples are the majority, a child from a heterosexual couple could feel discrimination. The students also questioned why adults feel children cannot handle information about homosexuality.

The authors found that after several months had passed, the students still discuss the books they read, and they have stopped using derogatory terms on the playground to insult others. They even mentioned standing up for others and for themselves. Although this article is not evidence-based, it discusses a way to bring up the topic of homosexuality issues in classrooms. It also shows that children are able to discuss these issues, especially if the classroom community uses critical thinking and dialogue to help them understand the issues. Introducing gay and lesbian themed children’s books is a way to introduce this topic and start a dialogue with students.

The authors begin by providing four obstacles to the inclusion of lesbian, gay, bisexual, and transgender (LGBT) issues in preparing teachers to provide safe schools and classrooms for students with every type of sexual identity. The first is assumptions, in which teachers and students alike make assumptions about
their pupils and classmates sexuality. Most often, they assume that their peers
and students are not gay or lesbian. In an anecdote, one professor points out to
his or her students when one student assumes everyone in the class is straight
and would not be hurt by his effeminate gestures, “You know the sexual
histories of all thirty-five people in this room well enough to say that? And
would it be okay to do that even if there were no one in the room who were gay
or lesbian?” (p. 31). Second, the hegemonic norm is the belief that everyone is
heterosexual and everyone came from heterosexual families. This leads to
educators of teachers not choosing readings by authors who are gay or lesbian,
or even not choosing guest speakers who are gay or lesbian. Most importantly,
most students and educators of teachers are not even aware of the lack of LGBT
issues in curriculum. A third barrier is that some individuals may perceive the
discussion of LGBT issues as promoting homosexuality and are against doing
so. Finally, there is a gap in the curriculum that includes LGBT education.
In educating new teachers, three goals can promote social justice. First, teachers
need to have knowledge, specifically about terminology such as gay and
transgender. Demographic information about LGBT students and parents is
important, as well as information to combat stereotypes. Second, the authors
suggest teachers need courage to take action about discriminatory acts that they
witness that are homophobic. Third, a teacher needs skills to help his or her
students rectify assumptions and to begin dialogue about issues that students
may not personally experience. The authors continue with specific ideas for the
major areas of content: math and science, English, language arts, visual and
performing arts, and social studies. In math and science classes, the authors
suggest challenging gender stereotypes such as a story problem dealing with
two male students baking for a bake sale instead of two female students. Or
using statistics such as hate crime rates, the rate of calling on males versus
females, or which sex makes more money. English classes provide more
opportunities to discuss sexual orientation. Many books can spark discussions
about the differences within families, relationships, and interactions. In the
visual and performing arts, it is suggested, “if the sexuality of the art or artist is
directly related to the work then it is relevant when discussing the context in
which the work was created” (p. 38). The use of music to teach about and
against homophobia is suggested. More information on this can be found in
Sapon-Shevin’s (1999) book Because We Can Change The World in the chapter titled “Using music to teach against homophobia.” Finally, social studies provides many opportunities to bring up the topic of homosexuality. For instance, the Stonewall Inn riots that occurred in New York City in 1969 are a part of the gay rights movement. Gay individuals were also included in the Holocaust as a hated group. The authors suggest a goal of social studies education is to create decent citizens who live in a democracy where there are multiple and diverse perspectives.

This book chapter gives new teachers, and educators of teachers, important information and ways to incorporate LGBT education and issues into the curriculum. These ideas are important suggestions and ways for teachers to lead by example despite the fact that they are not empirically tested. Most importantly, despite a teacher’s personal beliefs on gay and lesbian lifestyles, the ultimate goal is safe schools where all children can learn and be respectful of differences.

This author seeks to educate her students, who are future teachers, to understand that sexuality is not an either/or concept, where gender and sexuality fall into male-female, and heterosexual-homosexual. Gender and sexuality fall along a continuum of behaviors and expressions and these behaviors are only a small percentage of what makes each individual who they are. She also stresses that these educators will most certainly have students with parents or relatives who are sexual minorities, or the student themselves will be. Related to this, these students and family members will face damage from “name calling and hiding in the closet” (p. 54). Swartz also suggests that it is unrealistic to believe that bringing a role model or books into a classroom that deal with homosexuality is introducing a ‘new’ topic. There are already students, staff, and teachers who identify as LGBT in schools. Although the future teachers in the article have admitted to witnessing harassment, they most often do not allow themselves “to imagine the depth of the pain such harassment causes” (p. 56). In order to reach and teach all students, a teacher’s personal beliefs and prejudices should be set aside. Educating students
prevents them from drawing and adhering to inconsistent conclusions about homosexuality. Her students as future teachers, suffering their own prejudices living in Appalachia, “may not agree personally with queerness in all of its forms, (but) they do not deny the importance of just treatment for all students in the classroom” (p. 62). Swartz also notes that, as evidenced by the film It’s elementary: Talking about gay issues in schools, the idea that children are innocent about sexuality is a misconception. The children in the video knew a lot more than parents and teachers believed they did about homosexuality, stereotypes, and prejudices about sexual minorities and gender issues.

This article is not a statistical, controlled study, however through dialogue and teaching her students about gay and lesbian issues, the author was able to challenge and change their perceptions. Using a film to show real teachers in the classroom talking to students about LGBT issues and lifestyles is an important way to show future teachers that they can have discussions with their students and inform them in order to dispel their stereotypes and prejudices.

The Massachusetts Board of Education created the Safe Schools Program for Gay and Lesbian Students, also called SSP, to create policies in schools that help protect gay or lesbian students from being harassed, threatened, or discriminated against. It also offers crisis and suicide prevention training for school personnel. The SSP also calls for establishing gay-straight alliances (GSAs) as support groups in schools for gay, lesbian, and even heterosexual students. Finally, the program also provides for school-based family counseling for gay and lesbian students, or referrals for these services. The authors used cluster sampling to select schools from the four regions of Massachusetts to determine if implementing any of the SSP recommendations is evoking positive change. The sample included 1,646 students, 6.9% of which identified as gay, lesbian, bisexual, or questioning. In schools with GSAs, half of the students knew staff members who were supportive of gay, lesbian, or bisexual students, compared to only 36.9% of schools without GSAs. GSA formed schools cut down on gay and lesbian slurs, according to the students, and they have seen
an increase in positive, supportive comments about sexual minority youth from teachers. Schools with all three SSP recommendations adopted (a GSA, training for staff, and a definitive policy) had a higher sexual diversity climate. The authors define this as “the quality of the internal environment of the school experienced by students regarding the level of safety, tolerance, and atmosphere of respect for sexual minority individuals” (p. 62). Even students in schools where only one recommendation is in use still felt safer in school and felt the environment was less sexually prejudiced. Overall, students reported differences in attitudes and also differences in their own and others behaviors. Although important, the study is limited in several ways. There is an association of positive change between the recommendations and sexual diversity climate, but there is no way to account for all the other variables that can affect school climate. Therefore, the cause of the positive climate is not certain. It is also not a longitudinal study, so information on each school’s sexual diversity climate before the SSP recommendations are unavailable for comparison. In addition, the study included and targeted members of GSAs who may be more aware of the sexual diversity climate than the general student population.
